Hydraulic and Heavy Duty Filtration and Contamination Control

Version 2.0

ENGINEERING YOUR SUCCESS.

Parker Hannifin Corporation

ENGINEERING YOUR SUCCESS.

A global Fortune 300 company with customers in 48 countries, Parker Hannifin is the world's leading supplier of hydraulic, pneumatic, and electro-mechanical systems and components. Customers rely on Parker for engineering excellence, world-class manufacturing and outstanding customer service to provide comprehensive application solutions that are second to none.

The Parker Brand Promise

Parker is the global leader in motion and control technologies, partnering with its customers to increase their productivity and profitability.

- More than USD 13 billion in sales
- 298 plants worldwide
- 12,000 distributors
- 449,000 customers
- Serving 1,200 distinct markets
- Listed as PH on the New York Stock Exchange

Let Parker become part of your design team. Whether you need to develop new products, redesign existing applications, or design completely new systems, Parker offers unparalleled engineering expertise.

Parker Filtration's global reputation as a reliable supplier of superior filtration products is the result of a focused and integrated development and manufacturing system.

Parker Filtration consolidates quality filtration products, manufactured by process filtration, air and gas filtration and separation, fuel conditioning and filtration, hydraulic and lubrication filtration, fluid power products and fluid condition monitoring equipment into one broad-based range that covers many markets and most applications, as detailed here.

Together in one catalogue are Parker Filtration's hydraulic and heavy duty filtration products and the proven range of analysis and contamination monitoring products now including Parker Kittiwake instruments.

As the leader in the motion and control industry, Parker strives to be our customers' trusted partner. These relationships are cultivated by listening closely to our customers and repeatedly providing them with value measured in any currency: saved time, reduced waste, gained efficiency, expanded output and increased profitability.

Contents

Filtration and Reservoir Products

1. Low pressure filters

ETF Series – Tanktop mounted filters (Previously 1200)	15
TTF Series – Tanktop mounted filters	21
STF Series – Return Line filters	33
BGT Series – Tanktop mounted filters	39
IN-AGB Series – In-tank mounted filters	51
Tanktopper Series I, II & III – Tanktop mounted with integrated air breather	61
SR Series – Suction and return filters	69
PT Tank Top Mounted filters	77
Maxiflow Series – Spin-on filters	85
ATZ Series – Suction filters	91
Oil Conditioning Unit (OCU)	97

2. Medium pressure filters

12CS Series	104
15/40/80CN Series	110
45M/45 Eco Series (Previously 1145)	118

3. High pressure filters

15P/30P Series	124
100P Series (Previously H600 and H1000)	130
EPF iprotect® Series	135
EAPF iprotect® ATEX Certified Series	152
EMDPF iprotect® Series	160
EADPF iprotect® Series	172
18/28/38P Series	174
70/70 Eco Series (Previously 7000)	182
22PD/32PD Series	190

4. Filter Indicators

FMU Indicators and Pressure Indicators	196
--	-----

5. Heavy duty filtration products

GS Series - Medium pressure in-line filters	203
GA Series - Medium pressure in-line filters	207
BGAH Series - Medium pressure in-line filters	213
BGLS Series - Low pressure in-line filters	219
SF1040 Series - Low pressure in-line filters	223
Eco 130 Series - Medium pressure filters	227
HFS and HFD Series - High Flow Single and Duplex Filters	235
FMB - Modular Filter Manifold Block	243
DF2145 Series - Duplex filters	246
DFBO Series - Duplex in-line filters	250
DF40 Series - Duplex in-line filters	253
DF2089 Series - Duplex filters	257
DF60 Series - Duplex filters	261
DF65 Series - Duplex filters	265
DF2110 Series - Duplex filters	269
DF2050 Series - Duplex filters	273
DF2035 Series - Duplex filters	277
DFH2060 Series - Duplex filters	281
DF2070 Series - Duplex filters	285

6. Par-Test

Laboratory Analysis Service	290
-----------------------------	-----

7. Portable filtration systems

Guardian®	294
Filtration Unit	298
10MFP Series	303
PVS Series – Models 185, 600, 1200, 1800 and 2700	311

8. PAR◇FIT

Interchange replacement element range	321
---------------------------------------	-----

9. Marine PAR◇FIT

Interchange replacement element range	336
---------------------------------------	-----

10. Static control media

Static Control filter elements	339
--------------------------------	-----

11. Par-Gel

Par-Gel Water Removal Elements	344
--------------------------------	-----

12. Reservoir equipment

Reservoirs

Co-polymer and steel reservoir solutions	349
--	-----

Environmental Air Filters and Disposable Breathers

EAB Series	356
ABL Series	359
Triceptor	362

Glass-Filled Nylon Air Breathers

IP65 Rated Filler Breathers	365
Filler Breathers	368
Screw-On Type Air Breathers	369

Metal Filler Breathers

Filler Breathers (Metal)	372
Lockable Filler Breathers	374

Air Filters

Spin-On Air Breathers	375
-----------------------	-----

Fluid Level Indication

Fluid Level Temperature Gauges	378
Reservoir Float & Level Switches	381

Fluid Power Products

Suction Elements	384
Diffusers	386
Inline Filters	387
Drive Couplings	388
Multiclamp	390
Inline Check Valves	395
Single Station Gauge Isolator Valves	396
63mm Dia. Pressure Gauges	397
100mm Dia. Pressure Gauges	398

Fluid Condition Monitoring and Flowmeters

13. Fluid condition monitoring

icountLCM20 Contamination Monitor	399
Universal Bottle Sampler	406
icountBSplus Bottle Sampler	411
Single Point Sampler	424
System 20 Sensors and Monitors	427
MCM20 Autoremove Monitor	432
icountPD Particle Detector	436
icountPDR	445
icountOS Oil Sampler	449
icount Monitoring System	460
Moisture Sensor Range	462
Oilcheck Monitor	469

14. Fuel hydrocarbon monitoring

icountACM20 Lab Unit	472
icountPD Z2 Particle Detector (ATEX Approved)	476
icountACM20 Z2 Particle Counter (ATEX Approved)	478

15. Parker Kittiwake Products

Proven analysers and instruments including the MHC Bearing Checker, ANALEXfdMplus ferrous wear debris analyser, the Heated Viscometer and DIGI on-site Water in Oil monitoring kit.	484
---	-----

16. Transducers and transmitters

Asic 'Performer'	490
------------------	-----

17. Flowmeters and monitors

LoFlow – Oil and Water Flowmeters	495
Easiflow – Meters and Flowswitches	496
Dataflow – 4 to 20mA and Pulse Output Flow Transmitters	497
Dataflow Compact – Inline Flow Transmitter	498
Flowline – Oil and Water Calibrated Flowmeters (Brass and Aluminium)	499
Flowline – Oil and Water Calibrated Flowmeters (Stainless Steel)	500
Flowline – Flowswitches	501
Hydraulic Test Equipment	502
Flow Products – For Compressed Air Applications	503

18. Guide to contamination control

Guide to Contamination Control	509
--------------------------------	-----

Low Pressure Filters

ETF Series – Tanktop mounted return line filters - Page 15

- ETF utilizes a re-inforced co-polymer head equipped with 2 return ports.
- Quick-release cover design.
- Flow from inside to out.
- Maximum pressure 6 bar. Maximum flow 175 l/min.

TTF Series – Tanktop mounted return line filters - Page 21

- TTF features pre-filtration by means of a magnet column.
- Full flow bypass with low hysteresis.
- Maximum pressure 10 bar. Maximum flow 500 l/min.
- Options include a filling port in the filter cover and second return port.
- Patented *LEIF*[®] elements safeguard filtration quality.

STF Series – Return line filters - Page 33

- 'In-to-out' filtration design means contaminated oil cannot leak back into the system
- magnetic pre-filtration
- Cast iron filter head assembly
- multiple port configuration
- flows up to 500 L/min
- 10 bar maximum working pressure
- optional airtight diffusers
- *LEIF*[®] low environmental impact filter elements as standard

BGT Series – Tanktop mounted return line filters - Page 39

- BGT features pre-filtration by means of a magnet column.
- Filter heads with multiple ports available.
- Full flow bypass with low hysteresis.
- Maximum pressure 10 bar. Maximum flow 2400 l/min.
- Patented *LEIF*[®] elements safeguard filtration quality.

IN-AGB Series – In-tank mounted return line filters - Page 51

- IN-AGB features a bypass construction with low hysteresis.
- Magnetic pre-filtration and a high dirt-holding capacity.
- Wide range of diffusers including airtight options.
- Flow rates from 30 l/min to 2400 l/min.
- Patented *LEIF*[®] elements safeguard filtration quality.

Tanktopper Series I, II & III – Tanktop mounted with integrated air breather - Page 61

- Tanktopper offers a total filtration solution with integrated air breather.
- In-to-Out filtration plus gauge and switch options.
- Maximum pressure 10 bar. Maximum flow 650 l/min.
- Patented *LEIF*[®] elements safeguard filtration quality.

SR Series – Tanktop mounted suction and return filters - Page 69

- SR capable of feeding filtered oil under positive pressure to the suction side of the boost pump.
- Filters both open and closed loop oil systems through one filter.
- Maximum pressure 10 bar. Maximum flow 250 l/min.
- SR uses patented *LEIF*[®] elements to safeguard filtration quality.

PT Tank Top Mounted filters - Page 77

- Return line filter for direct mounting in copolymer reservoirs.
- Parker designs safeguard filtration quality.
- In to out flow avoids re-contamination of the system.
- Flow capability up to 400 l/min.

Maxiflow Series – Spin-on filters - Page 85

- Maxiflow full flow filters for suction or return applications.
- Available with optional indicators.
- Maximum pressure 10 bar. Maximum flow 360 l/min.
- High quality filter medium.

Low Pressure Filters continued

ATZ Series – Submersible suction filters - Page 91

- ATZ submersible suction filters locate below tank oil level.
- Pre-filtration takes place by means of a magnetic column.
- Maximum flow 300 l/min.
- In-to-Out filter stops contaminated oil leaking back into the system.

OCU – Oil Conditioning Unit - Page 97

- A range of off-line filtration 'packages'.
- Effective removal of water or particulate.
- A cost-effective method of reducing hydraulic and lube system contamination.

Medium Pressure Filters

12CS Series – Coreless Spin-on filters - Page 104

- 12CS features a re-usable coreless Ecoglass III element.
- Replaceable bowl design for easy element removal.
- Maximum pressure 35 bar.
- An eco filter solution for hydraulic systems

15/40/80CN Series – Medium pressure filters - Page 110

- CN utilizes a cast aluminium head and bowl.
- Excellent fatigue pressure ratings.
- Maximum pressure 70 bar. Maximum flow 600 l/min.
- An economic 'multi-purpose' filter solution.

45M/45M Eco Series – Medium pressure filters - Page 118

- 45M utilizes a cast iron head and steel bowl.
- Solves the problem of protecting system components at lower pressures.
- Maximum pressure 40 bar. Maximum flow 260 l/min.
- An ideal filter series for harsh environments.

High Pressure Filters

15P/30P Series – High pressure filters - Page 124

- 15P/30P utilizes a compact aluminium housing with 2 head sizes and 2 bowl lengths.
- Microglass III filter media.
- Maximum pressure 207 bar. Maximum flow 200 l/min.
- A quality filter for better control and long component life.

100P Series – High pressure filters - Page 130

- 100P design, only the bowl end-cap is removed on element change.
- Microglass III glassfibre media is standard.
- Maximum pressure 414 bar. Maximum flow 1000 l/min.
- An ideal solution where space is at a premium.

EPF - Page 135, EAPF - Page 152, EMDPF - Page 160 and EADPF - Page 172

- A new generation of high pressure filters.
- Manifold heads contribute to cost-effective integration of filters in a system.
- Rated at 450 bar for flows up to 700 l/min.
- Multiple bypass settings up to 7 bar.

18/28/38P Series – High pressure filters - Page 174

- Multiple bypass settings up to 7 bar.
- 18/28/38P features a range of head and bowl sizes and connection options.
- Microglass III glassfibre media is standard.
- Maximum pressure 414 bar. Maximum flow 700 l/min.

High Pressure Filters continued

 Global products as identified are offered worldwide through all Parker locations and utilize a common ordering code.

70/70 Eco Series – High pressure filters - Page 182

- 70/70 Eco features a range of head and bowl sizes and connection options.
- Microglass III glassfibre and Ecoglass III media is available.
- Maximum pressure 420 bar. Maximum flow 450 l/min.
- A proven filter offering high levels of system protection.

22PD/32PD Series – High pressure duplex filters - Page 190

- 22PD/32PD utilizes a duplex design with integrated balancing valve and vent ports.
- Microglass III glassfibre media is standard.
- Maximum pressure 210 bar. Maximum flow 260 l/min.
- Designed to offer continuous operation during element change.

Filter Indicators

FMU Δp – Indicators and pressure indicators - Page 196

- The FMU range of filter condition indicators, designed for use on a wide range of Parker filters
- Accurate visual, electronic or electrical filter condition feedback.
- Maximum pressure 420 bar.
- Mobile, industrial and marine applications.

Heavy Duty Filtration Products

GS Series – Medium pressure in-line filters - Page 203

- GS utilizes a cast iron housing design making it suitable for marine engine rooms and industrial gearbox installations.
- Microglass III or a cleanable metal mesh option.
- 3 different housing sizes can be specified.
- Maximum pressure 40 bar. Maximum flow 350 l/min.

GA Series – Medium pressure in-line filters - Page 207

- GA utilizes an 'in to out' design which eliminates contamination returning into the system.
- Microglass III, Ecoglass III media or a cleanable metal mesh option.
- Maximum pressure 30 bar. Maximum flow 230 l/min.
- An ideal solution for metal cutting equipment.

BGAH Series – Medium pressure in-line filters - Page 213

- BGAH is an ideal in-line solution for straight pipelines.
- Microglass III, Ecoglass III media or a cleanable metal mesh option.
- Patented *LEIF*[®] elements safeguard filtration quality.
- Maximum pressure 25 bar. Maximum flow 500 l/min.
- Highly customizable for differing applications.

BGLS Series – Low pressure in-line filters - Page 219

- BGLS utilizes an aluminium upper housing and steel lower housing.
- Low weight with high capacity solution.
- Maximum pressure 10 bar. Maximum flow 2000 l/min.
- Ideal for lube systems, wind turbines and hydraulic presses
- Patented *LEIF*[®] elements safeguard filtration quality.
- Microglass III, Ecoglass III media or a cleanable metal mesh option.

SF1040 Series – Low pressure in-line filters - Page 223

- SF1040 features a strong welded steel housing with DN80 or DN100 connections.
- Microglass III glassfibre media or a cleanable metal mesh option.
- Maximum pressure 10 bar. Maximum flow 1400 l/min.
- Ideal for gas and high flow systems.

Heavy Duty Filtration Products continued

Eco 130 Series – Medium pressure filters - Page 227

- Eco 130 is a versatile, modular filter system.
- Ability to bank multiple filters together in a 'duplex' format.
- Maximum pressure 30 bar. Maximum flow 1000 l/min.
- Microglass III, Ecoglass III media or a cleanable metal mesh option.

HFS and HFD Series – High Flow Single and Duplex Filters - Page 235

- Steel industry, paper mills, marine applications and power generation
- Lubricating systems fuel filtration
- Coolant filtration

FMB – Modular filter manifold block - Page 243

- Modular manifold solution
- Light weight aluminium design
- Ideal for industrial gearbox applications

DF2145 Series – Duplex filters - Page 246

- DF2145 duplex utilizes a robust cast iron housing for secure, continuous filtration.
- Microglass III, Ecoglass III media or a cleanable metal mesh option.
- Maximum pressure 30 bar. Maximum flow 80 l/min.
- A high specification filter for fuel, lube and hydraulic systems.

DFBO Series – Duplex in-line filters - Page 250

- DFBO duplex brings Parker Racor FBO filters to the marine engine room.
- Ensuring efficient water separation at all times.
- Maximum pressure 10 bar. Maximum flow 90 l/min.
- 2 bowl lengths, easy service and no special tools required.

DF40 Series – Duplex in-line filters - Page 253

- DF40 duplex utilizes a cast iron and steel design ideal for marine applications such as engine room installations.
- Microglass III, Ecoglass III media or a cleanable metal mesh option.
- Maximum pressure 40 bar. Maximum flow 200 l/min.
- Ideal for fuel, lube and hydraulic fluid systems.

DF2089 Series – Duplex filters - Page 257 . DF60 - Page 261. DF65 - Page 265

- DF2089 duplex utilizes a cast iron housing with 'in to out' flow to hold back contamination even during element change.
- Microglass III or a cleanable metal mesh option.
- Maximum pressure 30 bar. Maximum flow 350 l/min.
- A high specification filter for fuel, lube and hydraulic systems.

DF2110 Series – Duplex filters - Page 269

- DF2110 duplex is a 'heavy-duty' performer with high in to out flow to hold back contamination even during element change.
- Microglass III or a cleanable metal mesh option.
- Maximum pressure 30 bar. Maximum flow 1200 l/min.
- DN80 PN25 connections.

DF2050 Series – Duplex filters - Page 273

- DF2050 duplex features a cast iron housing with high dirt holding capacity yet low pressure drop.
- Microglass III or a cleanable metal mesh option.
- Maximum pressure 30 bar. Maximum flow =>1000 l/min.
- DN80 PN25 connections.

DF2035 Series – Duplex filters - Page 277

- DF2035 duplex utilizes an aluminium housing providing a lightweight, high capacity filter solution.
- Microglass III or a cleanable metal mesh option.
- Maximum pressure 8 bar. Maximum flow 600 l/min.
- Ideal for industrial gear and diesel engine lube systems.

Heavy Duty Filtration Products continued

DFH2060 Series – Duplex filters - Page 281

- DFH2060 duplex slim design provides maximum performance with minimum installation height.
- Microglass III or a cleanable metal mesh option.
- Maximum pressure 10 bar. Maximum flow 2200 l/min.
- Ideal for industrial and heavy duty diesel engine lube systems.

DF2070 Series – Duplex filters - Page 285

- DF2070 duplex design provides a welded housing with cast iron change over valve.
- Microglass III or a cleanable metal mesh option.
- Maximum pressure 10 bar. Maximum flow 1800 l/min.
- Ideal for diesel engine and high flow industrial lube systems.

Par-Test – Page 290

- The Par-Test service is a complete laboratory analysis service.
- Analysis is performed on a small quantity of fluid supplied by the customer.
- Parker Filtration has 3 European laboratory locations.
- The resulting Par-Test report is comprehensive in its detail.

Portable Filtration Systems

Guardian® Portable filtration system - Page 294

- Guardian® is designed to 'clean' new oil and deliver it to a system.
- Carries out a clean up of used fluid to its original condition.
- Maximum pressure 3.4 bar. Maximum flow 15 l/min.
- Filters petroleum based oils, water emulsions and diesel fuels.

Filtration Unit - Page 298

- Filtration unit offers both permanent and offline fluid cleaning where higher levels of contamination are expected.
- Lightweight design. Spin-on 10 micron Abs. element.
- Maximum pressure 6 bar. Maximum flow 15 l/min.
- Robust construction.

10MFP Hydraulic trolley - Page 303

- 10MFP hydraulic trolley is the ideal way to pre-filter and transfer fluids into reservoirs or to clean up a system.
- Heavy-duty frame but still lightweight and portable.
- Maximum flow 38 l/min.
- Par-Gel™ water removal elements available.

PVS Series-Models 185, 600, 1200, 1800 and 2700 - Page 311

- PVS draws water contaminated fluid out of a system.
- Removes water content and returns the 'clean' fluid to the reservoir.
- Maximum flow 170 l/min (PVS2700).
- Reduce the catastrophic results of water contamination.

PAR◇FIT™

Interchange replacement element range - Page 321

- PAR◇FIT™ elements are manufactured to the same exacting standards as Parker original elements using Microglass III and Ecoglass III media.
- Interchange elements for Pall, Hydac, Mahle, Internormen, MP Filtri, Donaldson and over 140 more manufacturers.
- Cross reference information available for over 50,000 part numbers.
- Marine PAR◇FIT™ options available.

Static Control Media - Page 339

- An effective method of reducing the overall impact of the electro-static process.
- Supports the reduction of varnish sealed in an oil system.
- Static Control elements typically extend oil life time.

Par-Gel™

Water removal filter elements - Page 344

- Par-Gel™ elements control water related problems in hydraulic power and lubrication systems.
- Helps reduce component wear and system downtime.
- Increases system efficiency and machine productivity.
- Reduces the chance of catastrophic system failure.

Reservoir Equipment

Environmental air filters and disposable breather - Page 355

- EAB Series – air flows up to 1500 l/min. Visual gauge option.
- ABL Series – 3 micron Abs. LEIF® element. 2 sizes.
- Triceptor – easy to fit, disposable when the silica gel turns to pink.

Glass-filled nylon air breathers - Page 365

- Moulded in non-corrodible, glass-filled nylon – strong and light.
- Single hole, 6 hole and 3 hole installation.
- Screw-on breather range – G1/2 and G3/4 options.
- Compact range – G1/4, G3/8, R1/2 and R3/4 options.

Metal filler breathers - Page 372

- Metal filler breathers – pressurized threaded type.
- Metal filler breathers – unpressurized threaded type.
- Filter flange type.
- Lockable range for reservoir security and oil protection.

Air filters - Page 375

- High capacity air breathers to remove airborne contamination.
- Disposable, 5 micron nominal quality elements.
- Models – 700, 1500, 1700 and 3000 l/min.
- Ideal for high flow heavy contamination systems.

Fluid level indication - Page 378

- 3 sizes of fluid level/temperature gauge. 2 hole mounting.
- 76mm, 127mm and 254mm mounting centres.
- Adjustable float switches – 3 lengths available.
- Capacitive level switch designed to give a low level alarm.

Fluid Condition Monitoring

icountLCM20 portable particle counter - Page 399

- 2-minute test procedure
- Multi-standard ISO, NAS and AS4059 cleanliness reporting.
- Data entry, data graphing and integral printer.
- Single Point Samplers (SPS's) are fingertip operated control valves that connect icountLCM20 and H2Oil into a system.

Fluid Condition Monitoring continued

Universal Bottle Sampler - Page 406

- The UBS advances LCM20's flexibility into Lab environments.
- Simple operation. Efficient test procedure.
- Clean and contamination free sampling.

icountBSplus bottle sampler - Page 411

- icountBSplus provides quick sample bottle analysis with variable test time options from 15 seconds and volume capacities from 10ml.
- Repeatable and re-producible results performance, calibration carried out to ISO11171 via ISO11943 principles.
- Design concept allows for portability with DC and rechargeable battery power options built-in.
- Sample tube self-cleaning sleeve minimizing contamination crossover.
- CE Marked.

icount Mini-Lab - Page 422

- icount Mini-Lab is the portable solution to fluid contamination bottle sampling, using the icountBS bottle sampler.
- Cleanliness awareness and monitoring control is only an oil sample away with the easy, 3-step/2 minute fluid analysis process.
- On-screen, full 256 colour, backlit STN transmissive.
- A cost-effective alternative to external laboratory service.
- Interactive software provides templates for printing 2-page analysis reports including ISO compliant results, raw data for full-sweep, particle size counts and graphs.

System 20 sensors and monitors - Page 427

- 3 sizes of inline System20 sensor for pressures up to 420 bar.
- Analogue monitor utilizes 3 day-glow gauges with protective cover.
- EM20 electronic monitor with full digital display and 300 test memory.
- For use with all mineral oils, water and water/oil emulsions.

MCM20 autoremote monitor - Page 432

- MCM20 online continuous particle counting ensures constant system monitoring within defined parameters.
- Calibration carried out to ISO1171 via ISO11943 principles. Multi-standard ISO and NAS reporting including full count/100 ml. detection at size ranges.
- Interactive handset options available for direct test sequencing, change test parameters and last test results.
- PC/PLC controlled.
- Can be pre-set to carry out tests at specific intervals.
- Connects permanently to a System20 sensor via 2 metre hose assembly.

icountPD particle detector - Page 436

- icountPD provides online and independent monitoring of system contamination trends.
- Laser diode light obscuration technology for repeatable results.
- Calibration to approved, on-line methods.
- Early warning LED or digital display indicators for low, medium and high contamination levels.
- Moisture RH% indicator option for real time water ingress awareness before saturation damage occurs.
- Fully PC/PLC integration technology such as:
 - RS232/485, 0-5V, 4-20mA, CANBUS (J1939).

icountPDR 'Robust' Particle Detector - Page 445

- Rugged design ensures protection against environmental exposure
- Independent monitoring of system contamination trends
- Small and compact device constructed in stainless steel

Fluid Condition Monitoring continued

icountOS Oil Sampler - Page 449

- Fluid viscosity as high as 300cSt (usable range) will be able to pass through the detector at the proper flow rate.
- Quick connections for testing hydraulic fluid online and offline.
- Able to sample directly from a hydraulic reservoir, barrel and vehicle fuel tank or from a high pressure, online hydraulic system with the addition of a pressure reducing adaptor.
- Data Storage up to 250,000 test points of information.

MS moisture sensor range - Page 462

- MS moisture sensors provide fast, reliable and accurate inline detection of moisture in fluids
- Technology developed for preventative maintenance programmes.
- MS150 'low pressure' suction line/reservoir applications. Temperature outputs. 10 bar maximum operating pressure.
- MS200 'Programmable' sensor monitoring and reporting relative humidity (RH), moisture content in oils.
- MS300 'Intrinsically safe' sensor ATEX certified for use in hazardous Zone environments.

Fuel Condition Monitoring

icountACM20 contamination monitor - Page 472

- icountACM20 monitors aviation fuel contamination to DEFSTAN 91-91 Jet A-1 fuel specification.
- A proven product that adopts Energy Institute Test Method IP 564.
- 2-minute test procedure. Multi-standard ISO cleanliness reporting.
- On-board, case-mounted pump means direct monitoring at a fuel storage tank for example is possible.

icountPD Z2 – Fuel particle detector - Page 476

- Independent monitoring of system contamination trends.
- Assembled in an approved and certified Stainless Steel enclosure to comply with ATEX Directive 94/9/EC.
- Can be used in explosive and hazardous areas.
- Mineral oil versions available.

icountACM20 Z2 - Page 478

- icountACM20 Z2 is assembled in an approved and certified Stainless Steel enclosure.
- Complies with ATEX Directive 94/9/EC and EN50 021 requirements.
- Designed for use in explosive and hazardous areas including offshore and mining applications.
- Has all the features of an icountLCM20 and an icountACM20.

Transducers and Transmitters

Asic 'Performer' - Page 490

- A quality range of transducers and transmitters with pressure ratings - 25, 60, 100, 250, 400 and 600 bar.
- One-piece body and diaphragm machining ensures long-term stability.
- All Stainless Steel construction.

Flowmeters and Monitors

Flowmeters, Flowswitches and Flow Monitors - Page 494

- LoFlow oil and water flowmeters. 10 bar max. working pressure.
- Easiflow meters and Flowswitches. Work in any plane. Flows from 1 to 150 l/min.
- Dataflow 4-20mA and pulse output flow transmitters and Dataflow Compact inline flow transmitter.
- Flowline oil, water and air calibrated flowmeters and flowswitches available in brass or Stainless Steel.
- Hydraulic Test Units for the diagnosis of hydraulic circuit faults with flow ranges from 2 to 360 l/min.

Important changes to our product ordering information

Standard Product Tables and a Product Configurator

Parker Filtration undertook a review of its part numbering with a view to standardising on a common part number style for all Filtration products. As a result of the many acquisitions we have made over the past 10 years, it became clear to us that there was a need to standardise on a clear format for our part numbers.

Accordingly, in this catalogue, you will find the new part number system with both a configurator and a supersedes cross reference relating to previous part numbers, issued in earlier editions of our generic catalogues. In the event that the previous reference you use is not shown in this catalogue, could we ask you to

please contact our European Product Information Centre. Contact details are on the back of this catalogue.

The examples below using the BGT Series Ordering Information, are included to explain how the Standard products are presented in the Ordering Information section of the catalogue and also how the Product Configurator works.

Explanation

Example 1. The Standard Products Table

We have created a catalogue ordering code and included in this table are details of these new part numbers.

Alongside this we have put the part number that has been superseded from previous catalogues.

Example 2. The Product Configurator

2a. As part of our catalogue ordering code we have introduced an **8-box part number configurator**. This configurator features items, which are marked in **bold** and are on a shortened delivery time. With this in mind we would ask that when making a selection using the configurator you select those items in bold to ensure the shortest lead-time.

2b. The configurator has been designed to cover not only the various models we offer but also different micron ratings, indicator options and port connections.

2c. Should you find that what you have selected is not available in the configurator, please feel free to call our European Product Information Centre (EPIC) to see if that option can be made available. Contact details are available on the back of this catalogue.

Green shaded graphs and ordering information

Where pressure drop graphs and ordering information are shown with a green tint, these options are 'Eco' options and environmentally friendly.

Parker's Value Proposition

Parker's Value Proposition

Parker is the leading filtration supplier worldwide. We have a powerful reputation, unparalleled breadth of products, and world-class customer service. However, Parker's greatest distinguishing benefits can be found in its Value Proposition. Parker believes that it takes more than our great products, competitive prices, and on-time delivery to satisfy customer demands. It takes a commitment to provide exceptional value.

At Parker, value is not a commodity. It is the result of personal relationships built around the customer's use of Parker's extensive resources. Our customer services include:

- **Design-Engineering Support**
- **System Design**
- **Components Selection**
- **New Product Development**
- **Custom-Component Manufacturing**
- **Assemblies and Kits**
- **Sub-System Configuration**
- **Global Support and Service**
- **ISO Certification**

Installing Parker Filtration filter assemblies such as the Suction and Return Series and *LEIF*[®] (Low Environmental Impact Filter) elements can provide the end user and OEM with some positive benefits:

- *LEIF*[®] can provide increased OEM spares business.
- Guaranteed Parker quality with every replacement filter element.
- Supports OEM end user loyalty to Parker elements.
- Support aftermarket sales and machinery performance.
- Parker elements promote quality and reliability to end users.

Providing the products and service our customers expect

A Global Product Range

With this catalogue we offer our customers an easy way to find technical specification and ordering information about Parker hydraulic filtration, fluid contamination monitoring and fluid power products.

Products shown in this catalogue have a broad range of applications. Our filter products are particularly designed for hydraulic and lubrication systems and transmissions. The fluid power products are also used in many industries and applications.

Typical applications can vary from road sweepers, fork lift trucks, agriculture harvesting machines, grass cutting equipment, lorry mounted cranes, forestry equipment, press brakes, industrial power units, waste management trucks, drilling equipment, marine, military equipment, paper mills, water treatment and filtration systems.

For more information about our products send your inquiry to your nearest sales location, see contact information at the back of this catalogue.

Important information on product ordering and part numbers

Parker Filtration has recently undertaken a review of its part numbering with a view to standardising on a common part number style for all Filtration products. As a result of the many acquisitions we have made over the past 10 years, it became clear to us that there was a need to standardise on a clear format for our part numbers.

Accordingly, in this new catalogue you will find the new part number system with a 'product configurator' and a superseded reference relating to previous part numbers issued in earlier editions of our generic catalogues. In the event that the previous reference you have is not shown in this catalogue, could we ask you to please contact our Epic Centre, details of which are on the back cover of this catalogue.

For additional information and an example explained, turn to page 12.

BSP ports offered in this catalogue conform to ISO228.

Supply chain management, service and support

Parker is addressing operation efficiency by expanding the systematic approach called 'Lean Manufacturing. Value stream analysis, flow manufacturing, reduced set-ups, manufacturing cell flexibility and fool-proofing systems are all contributing to the continuous improvement in our manufacturing sites. 'Lean' is also expressed in our premier customer service and second-to-none customer partnerships in supply chain management.

Engineering and manufacturing excellence

Parker Filtration's Filtration Group Europe (FGE) manufacturing focus is driven by a number of key elements that affect all areas of the business. People productivity, customer satisfaction, production throughput, quality and lean achievements are the drivers that help the FGE achieve ISO9001, QS9000, ISO9001 and ISO14001.

Significant investment by our parent Parker Hannifin Corporation continues to give FGE flexible manufacturing systems, automated test equipment and excellent laboratory test facilities.

New product development programmes and on-going product improvement initiatives are vital elements in maintaining a product range that meets customer demands for quality, reliability and engineering excellence.

R & D resources at the Parker Filtration locations in the UK, Finland and the Netherlands are both complimentary and comprehensive. Including, as examples, Multipass Test Installations, fatigue test unit, cleanliness service (water detection, special analysis, particle counting and analysis), 3D workstations, Thermal Cycle Test Chamber, Salt Spray and Humidity chambers.

Parker Hannifin Corporation herewith declares that Parker Hydraulic Filtration products are intended to be incorporated into machinery covered by Directive 89/392/EEC, as amended and that the following harmonised standards have been applied; EN982, EN292-1, EN292-2

We furthermore declare that, machinery incorporating Parker Hydraulic Filtration products, is not allowed to be put into service until the machinery has been found and declared to be in conformity with the provisions of Directive 89/392/EEC and with national implementing legislation.

In line with our policy of continuous product improvement, Parker Hannifin reserve the right to alter product data and specification without notice. This does not affect your statutory rights.

Notes:

1. Within this catalogue, each product has been allocated an operating temperature and pressure range.
2. The range listed for each filter is dedicated by the materials of construction and the capability of the seals specified.
3. Consideration should also be given to the characteristics of the system fluid when specifying filters for extreme temperature and/or pressure applications.
4. The use of non-Parker replacement elements and spares may invalidate your warranty.

ETF Series

Tanktop Mounted Return Line Filters
max. 175 l/min - 6 bar

An economic return line filter

Improved system protection

The ETF Series utilizes a re-inforced co-polymer head equipped with 2 return ports and quick-release cover. Maximum pressure 6 bar. Maximum flow 175 l/min. An economic return line filter that has been used and proven in many hydraulic filtration applications.

Product Features:

- ETF utilizes a re-inforced co-polymer head equipped with 2 return ports.
- Quick-release cover design.
- Flow from inside to out.
- Maximum pressure 6 bar. Maximum flow 175 l/min.
- An economic return line filter for hydraulic systems.

ETF Series

Tanktop Mounted Return Line Filters

Features & Benefits

Features	Advantages	Benefits
Co-polymer head	Compact profile, lightweight and durable	Less weight, smaller envelope and cleaner appearance
Multiple return line ports	Flexibility related to return line hose(s) arrangement	More compact solutions can be realised
Quick release cover	No tools required to release the filter cover	Easy change of filter element
Optional magnetic pre-filtration	Removes ferro particles, even during bypass conditions	Improved fluid cleanliness levels
In-to-Out filtration	All captured contamination retains inside the element	No recontamination of system during change of elements
Quick response bypass with low hysteresis	Reduction of bypass period due to low hysteresis	Improved protection of system
	Only a small part of the total flow is bypassing the element	
Optional funnel	Ensures that oil enters the tank under the oil level	Significant reduction of oil foaming

Typical Applications

- Lorry mounted cranes
- Agricultural equipment
- Container hook loaders

The Parker Filtration ETF Series Low Pressure Filters

For tank top mounting installation. The ETF Series utilises a reinforced co-polymer head equipped with two return ports and quick release cover. This filter represents an economic solution for hydraulic systems with nominal flows up to 175 l/min.

Specification

Pressure ratings:

Max. 6 bar.

Assembly:

Tank top mounted.

Connections:

Threads G1" + G1" (ISO 228), port B supplied as plugged connection.

Filter housing:

Glass reinforced co-polymer.
Funnel made from steel.

Seal material:

Nitrile.

Operating temperature range:

-20° to +80°C.

Bypass valve:

Opening pressure 1.6 bar.

Filter element:

Conventional style element with steel end caps.

Degree of filtration:

Determined by multipass test according to ISO 16889.

Flow fatigue characteristics:

Filter media is supported so that the optimum fatigue life is achieved.

Filtration media:

Microglass III.

Element burst rating:

8 bar (ISO 2941).

Indicator options:

Setting 1.0 bar.

Fluid compatibility:

Suitable for use with mineral and vegetable oils, and some synthetic oils. For other fluids, please consult Parker Filtration.

Pressure Drop Curves

The recommended level of the initial pressure drop for low pressure filters is max 0.5 bar.

If the medium used has a viscosity different from 32cSt, pressure drop over the filter can be estimated as follows:

$$\Delta p = (\Delta p_{32} \times \text{viscosity of medium used}) / 32\text{cSt}$$

ETF45 (Element length code 1)

TTF Series

Tanktop Mounted Return Line Filters
Max 500 l/min - 10 bar

Featuring pre-filtration by means of a magnetic column

Extended element life time

The TTF Series features pre-filtration by means of a magnet column and a quick response bypass with low hysteresis. Maximum pressure 10 bar. Maximum flow 500 l/min. A second return port is an available option as is a filling port in the filter cover.

Contact Information:

www.parker.com/hfde

Product Features:

- TTF features pre-filtration by means of a magnet column.
- Quick response bypass with low hysteresis.
- Maximum pressure 10 bar. Maximum flow 500 l/min.
- Options include a filling port in the filter cover and second return port.
- Patented *LEIF*® elements safeguard filtration quality.
- Flow from inside to out.

TTF Series

Tanktop Mounted Return Line Filters

Features & Benefits

Features	Advantages	Benefits
10 bar rated filter	Can be utilised for severe return line applications	Reduced downtime due to premature filter failures
Cast aluminium head	Compact profile, lightweight and durable	Less weight, smaller envelop and cleaner appearance
LEIF® elements	Element safeguards the use of genuine parts	Guaranteed quality of filtration Contributes to ISO 14001 certification
Magnetic pre-filtration	Removes ferrous particles, even during bypass conditions	Improved fluid cleanliness levels Extended element life time
In-to-Out filtration	All captured contamination retains inside the element	No recontamination of system during change of elements
High level of customisation	Dedicated system-matched solutions can be easily made available	Improved integration of filter in system combined with lower initial system costs
Quick response bypass with low hysteresis	Reduction of bypass period due to low hysteresis Only a small part of the total flow is bypassing the element	Improved protection of system
Standard or customised funnel	Ensures that oil enters the tank under the oil level	Significant reduction of oil foaming

Typical Applications

- Waste management trucks
- Mobile cranes
- Power packs
- Wheeled loaders
- Drilling equipment

The Parker Filtration TTF Series Return Line Filters

TTF tank top mounted return line filters feature pre-filtration by means of a magnet column and a quick response bypass with low hysteresis. Thanks to the “In-to-Out” filter principle, contaminated oil cannot leak back into the system. TTF filters are available in versions capable of handling flow rates up to 500 l/min. They can operate up to a maximum working pressure of 10 bar. Optional filling port in filter cover, second return port and customised diffusers can be specified.

Specification

Operation pressure:

Max. 10 bar.

Assembly:

Tank top mounted.

Connections:

Threaded BSP ports.
Flanged ports on request.

Filter housing:

Aluminium head and cover.

Seal material:

Nitrile, fluoroelastomer, neoprene.

Operation temperature range:

Seal material Nitrile: -40 to +100°C.
Seal material Fluoroelastomer: -20 to +120°C.

Bypass setting

Opening pressure 0.8 / 1.5 or 2 bar.
Other settings on request.

Degree of filtration:

Determined by multipass test according to ISO 16889.

Flow fatigue characteristics:

Filter media is supported so that the optimum fatigue life is achieved.

Filtration media:

Microglass III and Ecoglass III for LEIF® elements.
Also available 10µm cellulose and 40µm stainless steel mesh.

Element burst rating:

10 bar (ISO 2941)

Pressure indicator options:

Setting 0.7 or 1.2 bar.
Other settings on request.
Visual pressure gauge.
Electrical pressure switch.

Options:

Diffuser type P (straight pipe, no perforated plate area)
Diffuser type T (with closed diffuser end cap and with perforated plate area, recommended when oil entry in reservoir is close to the reservoir bottom or to ensure oil entry under the reservoir oil level)

Magnetic pack:

Standard. TTF400 and 500 are standard supplied without magnets

Filling port in cover: (optional)

Plugged.

Filter element:

LEIF® element with reusable metal element sleeve.

Optional conventional style element with steel end caps.

The LEIF® element is patented and safeguards the use of genuine parts.

Note: LEIF® element can be used with mineral and HEES type oils.

For other fluids consult Parker Filtration.

LEIF® contributes to ISO 14001 quality standards.

TTF Series

Tanktop Mounted Return Line Filters

Pressure Drop Curves

The recommended level of the initial pressure drop for low pressure filters is max 0.5 bar.

If the medium used has a viscosity different from 32cSt, pressure drop over the filter can be estimated as follows:

$$\Delta p = (\Delta p_{32} \times \text{viscosity of medium used}) / 32\text{cSt}$$

TTF60 (Element length code 2)

ATEX certified* (Category 2, non-electrical equipment)	EX

Note 1: TTF size 2-400 and 2-500 are standard supplied without magnets.
 Note 2*: For ATEX classified filters add EX after the code.
 For ATEX classified filters with electrical indicator are available on request.
 Visual indicators are classified as Category 2, non electrical equipment.
 Filter assemblies with EX code will be supplied with a dedicated name plate.
 Pls consult Parker Filtration for any questions related to the classification of our products.

STF Series

Return Line Filters

Max. 500 l/min - 10 bar

When safety is an essential requirement

Where the use of aluminium is restricted in applications such as marine and industrial, the STF return line filter series provides an ideal solution to hydraulic system designers and specifiers.

Contact Information:

Product Features:

- 'In-to-out' filtration design means contaminated oil cannot leak back into the system.
- Magnetic pre-filtration.
- Cast iron filter head assembly
- Multiple port configuration.
- Flows up to 500 L/min.
- 10 bar maximum working pressure.
- Optional airtight diffusers.
- *LEIF*[®] low environmental impact filter elements as standard.

STF Series

Return Line Filters

Features & Benefits

Features	Advantages	Benefits
10 bar rated filter	Can be utilised for severe return line applications	Reduced downtime due to premature filter failures
Cast iron head	Robust design	Convenient and effective solution for applications where aluminium is not allowed
LEIF® elements	Element safeguards the use of genuine parts	Guaranteed quality of filtration Contributes to ISO 14001 certification
Magnetic pre-filtration	Removes ferrous particles, even during bypass conditions	Improved fluid cleanliness levels Extended element life time
In-to-Out filtration	All captured contamination retains inside the element	No recontamination of system during change of elements
High level of customisation	Dedicated system-matched solutions can be easily made available	Improved integration of filter in system combined with lower initial system costs
Quick response bypass with low hysteresis	Reduction of bypass period due to low hysteresis Only a small part of the total flow is bypassing the element	Improved protection of system
Standard or customised funnel	Ensures that oil enters the tank under the oil level	Significant reduction of oil foaming

Typical Applications

- Marine power pack
- Steel mills
- Mining equipment
- Drilling equipment

The Parker Filtration STF Series Return Line Filters

STF Tank top mounted return filters feature pre-filtration by means of a magnet column and a bypass with low hysteresis. Thanks to the “In-to-Out” filtration principle, contaminated oil cannot leak back into the system. The STF filter has a casted iron filter head assembly, making it ideal for marine and industrial applications where the use of aluminium is restricted. The filter head with multiple ports, capable of handling flow up to 500 l/min at 10 bar working pressure, represents an easy and effective way of integrating return line filtration with power packs. Optional airtight diffusers are standard to avoid air ingress in the return line.

Specification

Operation pressure:
Max. 10 bar

Assembly
Tank top mounted

Connections
SAE flange
Threaded BSP ports

Filter housing and cover
Cast Iron (GGG40)

Seal material:
Nitrile, Fluorelastomer

Operating temperature:
Seal material Nitrile: -40°C to +100°C
Seal material Fluoroelastomer: -20°C to +120°C

Bypass setting
Opening pressure 0,8 / 1,5 / 2,0 bar

Degree of filtration
Determined by multipass test in accordance to ISO16889

Flow fatigue characteristics
Filter media is supported so that the optimum fatigue life is achieved

Filtration media
Microglass III and Ecoglass III for *LEIF*® elements
Also available 10 µm cellulose and 40 µm stainless steel mesh

Element burst pressure
10 bar (ISO 2941)

Pressure indicator options
Setting 0,7 and 1,2 bar
Visual pressure gauge
Electrical pressure switch

Options
Diffuser type P (straight pipe, no perforated plate area)
Diffuser type T (with closed diffuser end cap and with perforated plate area, recommended when oil entry in the reservoir is close to the bottom or to ensure oil enters the reservoir under the oil level)

Magnetic pack
Standard, only not included for STF 400 and 500

Filter element
LEIF® element with reusable metal element sleeve
Optional conventional style element with steel end caps
The *LEIF*® element is patented and safeguards the use of genuine parts.
Note:
LEIF® element can be used with mineral and HEES type oils
For other fluids consult Parker Filtration
LEIF® element contributes to ISO14001 quality standards

BGT Series

Tanktop Mounted Return Line Filters

Max. 2400 l/min - 10 bar

Patented **LEIF**[®] elements safeguard filtration quality

When high flow performance is needed

The BGT Series features pre-filtration by means of a magnet column and a full flow bypass with low hysteresis. Maximum pressure 10 bar. Maximum flow 2400 l/min. **LEIF**[®] elements available up to 1500 l/min. Designed for a wide range of mobile and industrial applications

Product Features:

- BGT features pre-filtration by means of a magnet column.
- Filter heads with multiple ports available.
- Flow from inside to out.
- Full flow bypass with low hysteresis.
- Maximum pressure 10 bar. Maximum flow 2400 l/min.
- Patented **LEIF**[®] elements safeguard filtration quality.

BGT Series

Tanktop Mounted Return Line Filters

Features & Benefits

Features	Advantages	Benefits
10 bar rated filter	Can be utilised for severe return line applications	Reduced downtime due to premature filter failures
Cast aluminium head	Compact profile, lightweight and durable	Less weight, smaller envelop and cleaner appearance
LEIF® elements	Element safeguards the use of genuine parts	Guaranteed quality of filtration Contributes to ISO 14001 certification
Magnetic pre-filtration	Removes ferrous particles, even during bypass conditions	Improved fluid cleanliness levels Extended element life time
In-to-Out filtration	All captured contamination retains inside the element	No recontamination of system during change of elements
High level of customisation	Dedicated system-matched solutions can be easily made available	Improved integration of filter in system combined with lower initial system costs
Quick response bypass with low hysteresis	Reduction of bypass period due to low hysteresis Only a small part of the total flow is bypassing the element	Improved protection of system
Standard or customised funnel	Ensures that oil enters the tank under the oil level	Significant reduction of oil foaming

Typical Applications

- Mobile cranes
- Excavators
- Deck cranes
- Fire fighting equipment
- Hydraulic presses
- Waste balers
- Industrial power units
- Fork lift trucks

The Parker Filtration BGT Series Tank Mounted Return Line Filters.

BGT tanktop mounted return line filters feature pre-filtration by means of a magnet column and a quick response bypass with low hysteresis. Thanks to the 'In-to-Out' filter principle, contaminated oil cannot leak back into the system. BGT Filters are available in versions capable of handling flow rates up to 2400 l/min. They can operate with a maximum working pressure of 10 bar. LEIF® elements are available for environment-friendly filtration for versions up to 1500 l/min.

Specification

Operating pressure:

Max. 10 bar.

Assembly:

Tank top mounted.

Connections:

Flanges SAE2", 3".

Threaded ports and multiple ports available.

Filter housing:

Aluminium head and cover.

Seal material:

Nitrile, fluoroelastomer, neoprene.

Operating temperature range:

Seal material Nitrile: -40° to +100°C.

Seal material Fluoroelastomer: -20° to +120°C.

Bypass setting

Opening pressure 0.8 / 1.5 or 2 bar.

Other settings on request.

Degree of filtration:

Determined by multipass test according to ISO 16889.

Flow fatigue characteristics:

Filter media is supported so that the optimum fatigue life is achieved.

Filtration media:

Microglass III and Ecoglass III for *LEIF*[®] elements.

Also available 10µm Cellulose and 40µm stainless steel mesh.

Element burst rating:

10 bar (ISO 2941).

Pressure indicator options:

Setting 0.7 or 1.2 bar.

Other settings on request.

Visual pressure gauge.

Electrical pressure switch.

Options:

Diffuser type P (straight pipe, no perforated plate area)

Diffuser type T (with closed diffuser end cap and with perforated plate area, recommended when oil entry in reservoir is close to the reservoir bottom or to ensure oil entry under the reservoir oil level)

Magnetic pack:

Standard.

Filling port in cover (optional):

BGT 3 = Plugged G1¹/₄. BGT 4 = Plugged G1¹/₂.

Filter element:

LEIF[®] element with reusable metal element sleeve.

Conventional style element with steel end caps.

The *LEIF*[®] element is patented and safeguards the use of genuine parts.

Note:

LEIF[®] element can be used with mineral and HEES type oils.

For other fluids consult Parker Filtration.

LEIF[®] contributes to ISO 14001 quality standards.

123	Item is standard
123	Item is standard green option
123	Item is semi standard
123	Item is non standard

Note 1: Part numbers featured with bold highlighted codes will ensure a 'standard' product selection.

Note 2: Alternate displayed part number selection will require you to contact Parker Filtration for availability.

Note 1*: For ATEX classified filters add EX after the code.

ATEX certified filters with electrical indicator are available on request.

Visual indicators are classified as Category 2, non electrical equipment.

Filter assemblies with EX code will be supplied with a dedicated name plate.

Pls consult Parker Filtration for any questions related to the classification of our products.

ENVIRONMENTALLY-FRIENDLY FILTRATION SOLUTIONS

Trust Parker to provide you with a range of 'green' filter products that impact positively on the environment. With the new E-Series your customers benefit from a solution that's smarter, safer and more responsible when it comes to filtration.

By significantly reducing waste levels, the E-Series is designed to increase the lifespan of hydraulic machinery. The Suction Return filter series features *LEIF*[®] elements that can be crushed and incinerated. By reducing bulk for disposal and recycling the material, this cost-effective solution contributes to a safer, cleaner environment.

Through Parker's advanced Laser CM technology, all vehicle operators can monitor fluid contamination on-site through a simple two minute test. This accurate monitoring method helps prevent catastrophic failure in critical systems instantly.

When it comes to filtration solutions you can rely on - the future is Parker.

Enjoy the benefits of 'green' filtration, email filtrationinfo@parker.com

IN-AGB Series

In-Tank Mounted Return Line Filters

Max. 2400 l/min

Flow from inside to out

Designed for in-built filtration

The IN-AGB Series features a quick response bypass construction with low hysteresis, magnetic pre-filtration and a high dirt-holding capacity. Flow rates from 30 l/min to 2400 l/min. *LEIF*[®] elements available up to 1500 l/min. A low cost, high performance filter.

Product Features:

- IN-AGB features a bypass construction with low hysteresis.
- Magnetic pre-filtration and a high dirt-holding capacity.
- Wide range of diffusers including airtight options.
- Flow from inside to out.
- Flow rates from 30 l/min to 2400 l/min.
- Patented *LEIF*[®] elements safeguard filtration quality.

IN-AGB Series

In-Tank Mounted Return Line Filters

Features & Benefits

Features	Advantages	Benefits
Filter integrated in tank	Compact low cost solution Filter protected by reservoir	Suitable for extreme heavy duty applications or hazardous environments No tank top parts contributes to improved esthetical design
LEIF® elements	Element safeguards the use of genuine parts	Guaranteed quality of filtration Contributes to ISO 14001 certification
Magnetic pre-filtration	Removes ferrous particles, even during bypass conditions	Improved fluid cleanliness levels Extended element life time
In-to-Out filtration	All captured contamination retains inside the element	No recontamination of system during change of elements
High level of customisation	Dedicated system-matched solutions can be easily made available	Improved integration of filter in system combined with lower initial system costs
Quick response bypass with low hysteresis	Reduction of bypass period due to low hysteresis Only a small part of the total flow is bypassing the element	Improved protection of system
Standard or customised funnel	Ensures that oil enters the tank under the oil level	Significant reduction of oil foaming

Typical Applications

- Agricultural machines
- Articulated dump trucks
- Forestry equipment
- Wheeled loaders
- Lubrication systems
- Excavators

The Parker Filtration IN-AGB In-Tank Mounted Return Line Filters.

The low-cost, high-performance return line IN-AGB filter features Q3 filter media, a bypass construction with low hysteresis, magnetic pre-filtration and a high dirt-holding capacity. The range is capable of handling flow rates from 30 l/min up to 2400 l/min. LEIF® elements are available for flow rates up to 1500 l/min, meeting the most stringent demands for environmentally-friendly filtration and offering protection against poor quality pirate elements.

Specification

Assembly:

Inside tank.

Seal material:

Nitrile, fluoroelastomer, neoprene.

Operating temperature range:

Seal material Nitrile: -40° to +100°C.

Seal material Fluoroelastomer: -20° to +100°C.

Bypass setting:

0.8/1.5 and 2.0 bar.

Other settings on request.

Degree of filtration:

Determined by multipass test according to ISO 16889.

Flow fatigue characteristics:

Filter media is supported so that the optimal fatigue life is achieved.

Filtration media:

Microglass III, Ecoglass III for *LEIF*[®] elements

Also available 10µm Cellulose and 40µm stainless steel mesh.

Element burst rating:

10 bar (ISO 2941).

Options:

Diffuser type P (straight pipe, no perforated plate area)

Diffuser type T (with closed diffuser end cap and with perforated plate area, recommended when oil entry in reservoir is close to the reservoir bottom or to ensure oil entry under the reservoir oil level)

Magnetic pack:

Standard.

Note: IN-AGB 2-400 and 2-500 are standard supplied without magnets.

Filter element:

LEIF[®] element with reusable metal element sleeve.

Optional conventional style element with steel end caps.

The *LEIF*[®] element is patented and safeguards the use of genuine parts.

Note: *LEIF*[®] element can be used with mineral and HEES type oils.

For other fluids consult Parker Filtration.

LEIF[®] contributes to ISO 14001 quality standards.

Pressure Drop Curves

The recommended level of the initial pressure drop for low pressure filters is max 0.5 bar.

If the medium used has a viscosity different from 32cSt, pressure drop over the filter can be estimated as follows:

$$\Delta p = (\Delta p_{32} \times \text{viscosity of medium used}) / 32\text{cSt}$$

Filter housing and element pressure drop based on 32cSt fluid viscosity and 0.87 density.

Tanktopper Series I, II & III

Tanktop Mounted Return Line Filters
with Integrated Air Breather

Max. 650 l/min - 10 bar

When an all-in-one solution matters

Reduction of reservoir accessories

The Tanktopper Series features an integrated, 10 micron Abs. air breather. Maximum pressure 10 bar. Maximum flow 650 l/min. *LEIF*[®] elements available. An all-in-one, easy-to-mount filter range for more compact tank design.

Product Features:

- Tanktopper offers a total filtration solution with integrated air breather.
- In-to-Out filtration plus gauge and switch options.
- Maximum pressure 10 bar. Maximum flow 650 l/min.
- Patented *LEIF*[®] elements safeguard filtration quality.

Tanktopper Series I, II & III

Tanktop Mounted Return Line Filters with Integrated Air Breather

Features & Benefits

Features	Advantages	Benefits
Return line filter with integrated airbreather	All in one filter	More compact design, cost reduction due to elimination of loose airbreather
Airbreather equipped with high quality labyrinth	No oil leakage through the airbreather	Improved efficiency of airbreather No oil leakage on the tank / in the environment
Second port and dipstick available	Filler port and level indicator function can be integrated in filter	Significant reduction of reservoir accessories
Airbreather element always supplied with spare return line filter elements	Both filter elements can be replaced during the service event	Improved protection of system due to change of airbreather element
LEIF® elements	Element safeguards the use of genuine parts	Guaranteed quality of filtration Contributes to ISO 14001 certification
Magnetic pre-filtration	Removes ferrous particles, even during bypass conditions	Improved fluid cleanliness levels Extended element life time
In-to-Out filtration	All captured contamination retains inside the element	No recontamination of system during change of elements
Full flow bypass with low hysteresis	Reduction of bypass period due to low hysteresis	Improved protection of system
	Only a small part of the total flow is bypassing the element	
Standard or customised funnel	Ensures that oil enters the tank under the oil level	Significant reduction of oil foaming

Typical Applications

TPR I

- Fork lift trucks
- Power packs
- Mini excavator

TPR II

- Gully-sucker
- Power packs
- Dredging ships

TPR III

- Mobile cranes
- Refuse vehicles

The Parker Filtration Tanktopper Series I, II & III Tanktop Mounted Return Line Filters.

The TPR Series I, II & III offer a total filtration solution. A 10-micron Abs. air breather that is integrated into the filter housing, a magnet column for pre-filtration, 'In-to-Out' filtration, a full-flow bypass with low hysteresis, and the high performance Q3 filter element materials are all proven success factors in efficient return-line filtration for flow rates up to 650 l/min. Several pressure gauges and switches can be applied, combined or not with a dipstick. The all-in-one, easy-to-mount cost-saving TPR solution allows for a more compact tank design.

Specification

Operation pressure:

Max. 10 bar.

Assembly:

Tank top mounted.

Connections:

Threaded BSP or SAE ports.
Second return port available for Tanktopper II and Tanktopper III.

Filter housing:

Aluminium head and co-polymer cover.

Seal material:

Nitrile, Fluoroelastomer.

Operation temperature range:

-40 to +80°C.

Bypass setting:

Opening pressure 0.8, 1.5 or 2.5 bar for Tanktopper I.
Opening pressure 1.5 bar for Tanktopper II and III.

Degree of filtration:

Determined by multipass test according to ISO 16889.

Flow fatigue characteristics:

Filter media is supported so that the optimum fatigue life is achieved.

Filtration media:

Microglass III, Ecoglass III for *LEIF*® element. Air breather 10 micron Abs. Also available 10µm Cellulose and 40µm stainless steel mesh. (TPR1)

Element burst rating:

10 bar (ISO 2941).

Pressure indicator options:

Setting 0.7 or 1.2 bar.
Other settings on request.
Visual pressure gauge.
Electrical pressure switch.

Options:

Dipstick
Second port (only for TPR II and III)

Magnetic pack:

Optional for Tanktopper I.
Standard for Tanktopper II and III.

Filter element:

LEIF® element with reusable metal element sleeve.
Conventional style element with steel end caps only optional for Tanktopper I. The *LEIF*® element is patented and safeguards the use of genuine parts.

Note: *LEIF*® element can be used with mineral and HEES type oils. For other fluids consult Parker Filtration.
LEIF® contributes to ISO 14001 quality standards

Suction Return Series

Tanktop Mounted Suction & Return Line
Filters - Types SR1 & SR2
Max. 250 l/min - 10 bar

Filters both open
and closed loop oil
circuits through one
filter

Reduced risk of pump cavitation

SR1 and SR2 are capable of feeding filtered oil under positive pressure to the suction side of the boost pump filtering both open and closed loop oil systems through one filter. Maximum pressure 10 bar. Maximum flow 250 l/min. Use *LEIF*[®] environmentally friendly elements.

Product Features:

- SR capable of feeding filtered oil under positive pressure to the suction side of the boost pump.
- Filters both open and closed loop oil systems through one filter.
- Maximum pressure 10 bar. Maximum flow 250 l/min.
- SR uses patented *LEIF*[®] elements to safeguard filtration quality.

Suction Return Series

Tanktop Mounted Suction & Return Line Filters - Types SR1 & SR2

Features & Benefits

Features	Advantages	Benefits
Compact design	Less space required to apply SR Series	Improved flexibility during system design
Bypass valve mounted in series with back-pressure valve	Pressurisation of filtered oil for hydrostatic drive ensured during bypass	Lower risk of pump cavitation No direct bypass in the tank reducing the additional risk of oil foaming
LEIF® elements	Element safeguards the use of genuine parts	Guaranteed quality of filtration Contributes to ISO 14001 certification
Strainer located in filter head	Strainer filters all bypass fluid by using a system-matched degree of filtration	Improved protection of system Strainer can be inspected and cleaned during service events
High level of customisation	Dedicated system-matched solutions can be easily made available	Improved integration of filter in system combined with lower initial system costs
Quick response bypass with low hysteresis	Reduction of bypass period due to low hysteresis Only a small part of the total flow is bypassing the element	Improved protection of system
Standard or customised funnel	Ensures that oil enters the tank under the oil level	Significant reduction of oil foaming
Multiple ports availability	Flexibility related to suction- and return line hose(s) arrangement	More compact solutions can be realised The use of manifold blocks can be avoided Easy to integrate with cooler circuit

Typical Applications

Mobile equipment with both open and closed hydraulic circuits. For example:

- Road sweepers
- Road rollers
- Fork lift trucks
- Loading shovels
- Telescopic handlers
- Dump trucks
- Skid steers
- Agricultural harvesting machines
- Mini excavators

The Parker Filtration Tank Top Mounted Suction & Return Line Filters.

A tank top mounted return filter capable of feeding filtered oil under positive pressure to the suction side of the boost pump, thereby filtering both open and closed loop oil systems through one filter. The Parker SR filters use the LEIF® element for environmental-friendly filtration and offers protection against the use of pirate elements. Several options including integrated suction strainer and dipstick are available.

Specification

Pressure ratings:

Max. 10 bar.

Assembly:

Tank top mounted filters.

Connections:

Return port G1 (to BS 2779).

Suction port G³/₄ (to BS 2779).

} SR1

Return port G1¹/₄ (ISO 228) or SAE20:

Optional second return port type SR2.

Suction port G1 (ISO 228) or SAE16:

Standard two suction ports.

} SR2

Seal material:

Type SR1 – Nitrile.

Type SR2 – Nitrile, Fluoroelastomer.

Other seal material on request.

Operating temperature range:

-30° to +110°C.

Bypass valve system:

Main system bypass valve.

Type SR1 – 1.7 bar (2.5 bar optional).

Type SR2 – 1.7 bar (2.5 bar optional).

Degree of filtration:

Determined by multipass test according to ISO 16889.

Flow fatigue characteristics:

Filter media designed to optimise fatigue life.

Filtration media:

Type SR1 and SR2 –

Ecoglass III for *LEIF*[®] elements. See 'degree of filtration' table on the Ordering Information page.

- High dirt holding capacity.

- Low pressure drop.

- Extended service life.

Element collapse rating:

Type SR1 – 10 bar (ISO2941).

Type SR2 – 10 bar (ISO2941).

Suction line:

Back-pressure valve setting 0.5 bar (nominal).

Anti-cavitation:

Emergency suction valve fitted as standard.

Construction:

Type SR1 and Type SR2

Filter Housing: Precision pressure die casting

Cover:

Glass reinforced nylon (high impact and temperature resistant)

Weight:

1.4Kg 3.3Kg

Filter element:

LEIF[®] element with reusable metal element sleeve.

element:

The patented *LEIF*[®] concept contributes to ISO14001

and can be applied with mineral and HEES type fluids.

For other fluid types consult Parker Filtration.

} SR1 & SR2

Code	FMUS6HBMG02L (NO switch) FMUS7HBMG02L (NC switch)

Note: Vacuum indicators visual or electrical are available on request for filter type SR2 only.

Principles of Operation

Suction Return Series filter

This one filter assembly is designed to carry out two specific functions:

- (1) Filter system return line oil.
- (2) Supply filtered oil under positive pressure to the closed loop hydrostatic circuits.

Principles of operation

- (1) Return oil from both the open and closed circuits* is fed into the Suction Return Series Filter at port 'R'.
- (2) The filtered oil is maintained at a nominal 0.5 bar by the unique back pressure valve assembly and fed into the closed loop hydrostatic circuit via port 'S'.
- (3) Surplus filtered oil is fed back to the tank via the back pressure valve assembly.
- (4) Emergency suction (anti-cavitation) valve: This valve is fitted as standard to ensure oil is always available to the closed loop system, even on emergency occasions when the return flows do not meet the flow demands of the closed loop circuit.

Additional installation guidance notes

- (1) Return oil flow should always be greater than the oil flow rate demanded by the closed loop charge pump.
- (2) Oil level at all times should not fall below valve assembly at the base of the filter bowl.

Benefits

- (1) Only one filter is required to supply filtered oil to both open and closed loop circuits.
- (2) Feeding the closed loop circuit with filtered oil at a nominal pressure of 0.5 bar ensures excellent cold start characteristics, thus reducing the risk of cavitation.
- (3) Four hole mounting with gasket seal.
- (4) Microglass III filter element materials ensure; low pressure drop, high dirt holding capacity and extended service life.
- (5) Type Parker SR filters with patented *LEIF*[®] element, unique drain construction, quick element replacement concept.

*CAUTION:

Back pressure in pump and motor drain lines should always be kept at a minimum thus protecting shaft seals etc.

If case drain oils are to be fed through the return line filter please consult the pump/motor manufactures for details on maximum allowable back pressure.

Ensure filter elements are replaced when element condition indicators show that the bypass setting has been reached.

Failure to observe the above operation and guidance notes, or use of non genuine Parker specified filter elements could cause damage to the system. System designers should always ensure that adequate cooling capacity is available.

Suction Return Series

Tanktop Mounted Suction & Return Line Filters - Types SR1 & SR2

Pressure Drop Curves (Type SR1)

The recommended level of the initial pressure drop is approximately 1 bar.

If the medium used has a viscosity different from 32cSt, pressure drop over the filter can be estimated as follows:

The total $\Delta p = \text{Housing } \Delta p_h + (\text{Element } \Delta p_e \times \text{working viscosity}/32)$.

SRL1 Empty Housing (Length Code 2)

SRL1 (Element Length Code 2)

Curves are based on 32cSt fluid viscosity and 0.87 Kg/l density.
Line represents the Δp of the housing including the back pressure valve.

Pressure Drop Curves (Type SR2)

Curves are based on 32cSt fluid viscosity and 0.87 Kg/l density.

SRL2 Empty Filter Housing

SRL2 Filter Element Length 2

Line represents the Δp of the housing including the back pressure valve.

LEIF®

Ecoglass III

Parker E-Series

Ensure that the impact for the environment is minimized.

The development of filter products for Parker is an on-going process driven by the needs of the customer and the protection of our fragile planet.

E-Series filters are Parker's positive contribution to help minimize the impact on the environment with LEIF® Low Environmental Impact Filters and the Ecoglass III elements. Product ranges that together will help reduce disposal volumes and costs.

For more information on Parker Filtration's hydraulic environmental solutions, contact us today.

E-Series

Low Pressure Filters LEIF® elements

- Up to 1500 l/min
- Patented design
- Re-usable element sleeve
- Contributes to ISO 14001
- LEIF® elements contain Ecoglass III media

Medium & High Pressure Filters Ecoglass III elements

- Medium pressure up to 1400 l/min
- High pressure up to 450 l/min
- Re-usable support tube
- Contributes to ISO 14001
- Ecoglass III media

PT Tank Top Mounted filters

Max. 400 l/min - 10 bar

An economical alternative for quality tank top mounted filtration

In to out flow design avoids re-contamination of the hydraulic system

The PT tank top mounted filter features an aluminium filter head and screw-in style filter elements. This offers the opportunity to use the filter element as screw-in style for co-polymer reservoirs. With a Parker design that protects the quality of filtration, the PT offers a modularity and value for money.

Product Features:

- Compact tank top mounted return line filter.
- Filter element can be used for direct screw-in mounting with co-polymer reservoirs.
- Parker quality filter element.
- In to Out flow avoids re-contamination of the system.
- Flow capability up to 400 l/min at 10 bar working pressure.

PT Tank Top Mounted filters

Max. 400 l/min - 10 bar

Features & Benefits

Features	Advantages	Benefits
Aluminium filter head	Low profile, lightweight and durable	Less weight, smaller envelope and cleaner appearance.
In-to-Out filtration	All captured contamination retains inside the element	No recontamination of the system during change of element
Disposable filter cartridge	Easy to change cartridge	New housing cover and seals provided with each element change
Microglass III media	Multi-layered design produces high capacity and efficiency	Reliable performance. Reduced downtime

Typical Applications

- Lorry mounted cranes
- Agricultural equipment
- Grass cutting equipment
- Container hook loaders

The Parker Filtration PT tank top mounted series

The PT Series filter is available in various sizes covering a flow rate up to 400 l/min. Using the Microglass III media in 2, 5, 10 and 20 microns it provides premium particle removal efficiency.

This unique design simply threads into a ported tank ring, which can be bolted to a metal reservoir.

The disposable filter cartridge is a single-piece construction, which incorporates the nylon cover and integral 1.7 bar bypass valve. The flow path is inside-out and requires no special tools for service.

This concept assures minimal installation costs with the least space requirements for return line applications.

Specification

Pressure ratings:

Max. 10 bar.

Connections

PT2: G¾" and G1"

PT4: G1" or G1¼"

Filter housing:

Aluminium

Filter element:

Parker design including cover for filter housing (one disposable unit)

Seal material:

Nitrile, viton

Operation temperature:

-20°C to + 100°C

Bypass:

1.7 bar

Degree of filtration:

Determined by multipass test in accordance to ISO16889

Flow fatigue:

Filter media is supported so that the optimal fatigue life is achieved (ISO3724)

Filter Media:

Microglass III

Indicator options:

Visual and electrical switch (NO/NC) type

Fluid compatibility:

Mineral and HEES type fluids

Principle of Filtration

The PT applies In-to-Out Filtration, this ensures that captured contamination is retained in the element during servicing the filter.

Bypass valve is integrated in the filter bottom element end cap. The filter element is completely disposable.

Safety First

Each spare filter element is including seals for the sealing between tank top mounted filter housing and filter element. Because all seals are pre-mounting, no risk that (incorrect) seals are not replaced.

PT Reservoir 'screw-in' solution to reduce costs and space

The PT applies In-to-Out Filtration, this ensures that captured contamination is retained. The PT element can be integrated directly into a co-polymer reservoir. Parker Filtration can provide cavity details to co-polymer reservoir manufacturers to support this innovative solution.

This cavity includes the integrated return line port and optional connection for the pressure switch.

Thanks to the complete screw-in style solution, typically over 30% of the first fit cost can be reduced, the reservoir surface remains flat and hence can support more compact solutions, in particular for mobile applications.

Compared to the traditional tank top mounted filter, improved sealing between the reservoir and the filter can be achieved, eliminating potential leakage areas by 50% typically.

Please consult Parker Filtration for engineered reservoir solutions

Maxiflow Series

Spin-on Filters

Max. 360 l/min - 10 bar

Designed for both suction and return application

Spin-on filters

The Maxiflow Series full flow filters for suction or return are designed to provide quality protection for hydraulic or lubrication systems.

Rated at a maximum pressure of 10 bar at 360 l/min, Maxiflow filters cover a wide range of mobile and industrial applications.

Pressure Drop Curves

The recommended level of the initial pressure drop for low pressure filters is max 0.5 bar.

If the medium used has a viscosity different from 30cSt, pressure drop over the filter can be estimated as follows:

$$\Delta p = (\Delta p_{30} \times \text{viscosity of medium used}) / 30\text{cSt}$$

The PAR FIT™ Fit

THERE'S ONLY ONE SOLUTION

When it comes to replacement hydraulic filter elements there is only one solution: The ParFit interchange element range.

With over 50,000 standard, off-the-shelf variations, there is a ParFit element to fit most sizes and makes of OEM filters on mobile, construction, agricultural and industrial plant.

Every ParFit filter element is manufactured in Europe to the highest standards and is backed by our unrivalled technical support and money-back guarantees.

That means that you can reduce stockholdings, cut costs and be sure of the ultimate performance, with long, trouble-free operating life.

ParFit filters are available from ParkerStores and authorised distributors throughout the UK. To find your nearest ParkerStore Email filtrationinfo@parker.com or find the ParFit you need using our element selector at www.parker.com/parfit.

ATZ Series

Suction Filters

Max. 300 l/min

When the ultimate protection is critical

Compact and robust cast aluminium filter design

The ATZ Series locate below tank oil level offering maximum protection for the hydraulic system pump. Pre-filtration takes place by means of a magnetic column. Maximum flow 300 l/min. Suitable for heavy duty industrial applications and recommended for reservoirs with high contamination ingress.

Contact Information:

Product Features:

- ATZ submersible suction filters locate below tank oil level.
- Pre-filtration takes place by means of a magnetic column.
- Maximum flow 300 l/min.
- In-to-Out filter stops contaminated oil leaking back into the system.

ATZ Series

Suction Filters

Features & Benefits

Features	Advantages	Benefits
Cast aluminium construction	Compact and robust durable construction	Suitable for heavy duty industrial applications
Integrated check valve	Filter element can be changed when the filter housing is submerged under the oil in the tank	Improved protection of sophisticated pumps
Magnetic pre-filtration	Removes ferrous particles, even during bypass conditions	Improved fluid cleanliness levels Extended element life time
In-to-Out filtration	All captured contamination retains inside the element	No recontamination of system during change of elements
Wide range of vacuum measurement devices	Continuous filter condition monitoring	Contributes to just-in-time service Improved protection of pump when pressure measurement device connected with pump drive management

Typical Applications

- Wool untangling machine
- Hydraulic winch
- Power packs with sophisticated pumps
- Drilling blocks

The Parker Filtration ATZ Series Submersible Suction Filters.

ATZ Filters are located below the tank's oil level, offering maximum protection for the hydraulic system pump. When removing the element, the check valve closes automatically, eliminating any chance of oil leakage. Pre-filtration takes place by means of a magnet column. Thanks to the 'In-to-Out' filter principle, contaminated oil cannot leak back into the system. ATZ Filters are capable of handling nominal flow rates up to 300 l/min.

Specification

Operating pressure:

Vacuum.

Assembly:

Suction line filter, mounted horizontally against tank side.

Connections:

Threads G1 $\frac{1}{2}$ (ISO 228) or flanges 2" SAE-300PSI.

Filter housing:

Aluminium.

Seal material:

Nitrile, neoprene, fluoroelastomer.

Operating temperature range:

Seal material Nitrile: -40° to +100°C.
Seal material Fluoroelastomer: -20° to +130°C.

Bypass valve:

Blocked.

Degree of filtration:

Determined by multipass test according to ISO 16889.

Flow fatigue characteristics:

Filter media is supported so that the optimal fatigue life is achieved.

Filtration media:

Microglass III.
10 μ cellulose and 40 μ Stainless Steel.

Element burst+ rating:

10 bar (ISO 2941).

Pressure indicator options:

0.15 bar or 0.30 bar (vacuum gauge).
125-250VAC (LI-0, 5A, Lr-2, 0A) (electrical vacuum switch).
12-28Vdc (Li-1, 0A, Lr-3, 0A) (electrical vacuum switch).

Features:

Unique check valve, enabling element change below oil level.

Filter element:

Element with steel end caps.

ATZ Series

Suction Filters

Specification (cont.)

ATZ-120

The Parker suction filters, type ATZ, are designed for submerged operation. The filters contain a unique check valve which automatically closes when the filter insert is removed from the housing, thus enabling element change below oil level. Construction is based on the field proven Parker Filter System.

ATZ-300

Pressure Drop Curves

The recommended level of the initial pressure drop for suction filters is 0.03 bar.

If the medium used has a viscosity different from 32cSt, pressure drop over the filter can be estimated as follows:

$$\Delta p = (\Delta p_{32} \times \text{viscosity of medium used}) / 32\text{cSt}$$

Filter housing and element pressure drop based on 32cSt fluid viscosity and 0.87 density.

Oil Conditioning Unit (OCU)

Off-line filtration for the removal of water or particulate from hydraulic and lube system fluids.

A cost-effective solution that helps ensure system reliability.

The Parker Oil Conditioning Units (OCU) are a family of off-line filtration packages designed to effectively remove water or particulate contamination from hydraulic and lube system fluids. The high performance, high capacity design enables the efficient removal of the very fine contaminants that cause premature wear in expensive hydraulic components. In addition, the precursors to varnish are also reduced or eliminated completely.

The compact, user-friendly OCUs are a cost effective method of reducing system contamination while helping to ensure the reliability of your hydraulic or lube system.

 - hydraulic equipment

Technology

Oil Conditioning Unit

The filter design allows the oil to flow under pressure through 114mm of engineered media with three distinct stages of filtration and water absorption.

The largest particles are retained in the top of the element (1), making for an excellent diagnostic tool. Smaller particles are trapped in the mid stage (2), and the smallest particles are trapped in the lower and most compressed part of the element (3).

The cellulose media allows water absorption of up to 200 millilitres within the filter, reducing the water concentration in oil to less than 100 parts per million typically.

Equally noteworthy is the efficiency of the media in removing resins, metals and oxidation products, all of which are extremely damaging to close-tolerance components.

Manufactured from a specifically engineered cellulose material wound onto a central core, the OCU combines filtration principles to achieve effective filtration – low flow, low pressure and depth loading axial filtration – flow direction from the top to the bottom.

A card sleeve compresses the lower part of the element to increase the density and a non-woven cloth protects the base and stops particle migration.

Features and Benefits

- Solid Partical Filtration
- Water Absorption
- Sludge, Resin, and Oxidation Absorption

The Parker OCU Benefits

- Removing up to 99% of all Solid Contaminates typically
- Reducing the Water Concentration to Less than 100 ppm typically
- Eliminating Resins and Oxidation Products
- Longer Life for Hydraulic Components
- Significant Reduction of Oil Consumption and Oil Disposal Cost
- Low Cost Full Flow Filter Cartridges
- Reduce Equipment Downtime
- Reduce Operating Cost
- Increase Profit

Features and Benefits Continued

Tool-less access and easy service via the T-handle.

The combination of chemically treated cellulose and synthetic layers of media presents a massive surface area to remove solid contamination and emulsified water. The result is both exceptional dirt holding capacity and removal of water concentration to less than 100 ppm.

The engineered base design at the bottom of the housing supports the element under high pressure and provides a channelled migration path for clean fluid to flow back into the primary stream.

The Oil Conditioning Unit is designed as a top load filter, but can be mounted at any angle using the heavy-duty mounting bracket.

The intricately channelled base provides a large footprint to fully support the element under pressure, ensuring uniform loading of the element. Ultra-clean oil flows through the channels into the clean oil stream.

Element Performance

Model OC1				
Media Grade	Part Number	Capacity @ 1.7 bar (25 PSID)	Capacity @ 3.5 bar (50 PSID)	Efficiency
2 Micron	942650	16.2 grams	23.3 grams	B2>400
10 Micron	942652	28 grams	44.3 grams	B10>400

Model OC2				
Media Grade	Part Number	Capacity @ 1.7 bar (25 PSID)	Capacity @ 3.5 bar (50 PSID)	Efficiency
2 Micron	942654	22 grams	45.8 grams	B2>400
10 Micron	942656	36.5 grams	61.6 grams	B10>400
Water absorption for the OC2 element (part number 942682) is typically 900 cc.				

Results typical from Multipass tests run per modified test standard ISO 16889 to 3.5 bar (50 PSID) terminal - 100 mg/L BUGL ISO Medium Test Dust was used as per the standard - User results will vary based on system particle distribution.

Dirt Holding Capacity results will typically improve with soft or sub-micron size particles due to reduced surface 'caking'.

Notes:

- When selection from Box 1 is "OC2", and selection from Box 2 is "X", "S08" **must** be selected for Box 7.
- "120" and "220" are available **only** when "OC2" is selected in Box 1.
- "WR" available for OC2 **only**.
- "S08" is **only** used when "OC2" is selected in Box 1 and "X" is selected in Box 2.

12CS Series

Coreless Spin-on Filter

Max. 75 l/min - 35 bar

Environmentally friendly alternative for spin-on filtration

Lightweight, non-metallic element that can be incinerated

The 12CS Series features a Parker, replaceable coreless Ecoglass III element in a re-usable bowl for easy used element removal and disposal. Maximum pressure 35 bar and the Ecoglass element offers a low environmental impact in landfills.

Contact Information:

Product Features:

- 12CS features a Parker quality, replaceable coreless Ecoglass III element.
- Re-usable bowl design for easy element removal.
- Maximum pressure 35 bar.
- An eco filter solution for hydraulic systems.

Coreless Spin-on Filters

12CS Series

WASTE.

500,000,000+

spin-on cans disposed of each year in North American landfills.

30,000,000

gallons of discarded residual waste oil.

250,000

tons of scrap metal.
Expensive disposal costs.

NOT.

The Smart Alternative to Spin-on Cans!

Features:

Parker engineers have developed an innovative alternative to the age old spin-on style can. This new design provides all of the benefits of high efficiency, long life Ecoglass III filtration, without the environmental impact.

The new environmentally-friendly 12CS hydraulic filters feature a reuseable bowl and a quality filter element constructed primarily of nylon and fiberglass. The element core is permanently attached as part of the filter bowl. When replaced, the element reduces costs, eliminates hot drain requirements, can be easily incinerated, and is better-suited for most landfills.

The 35 bar filter is rated up to 220 l/min, with premium Ecoglass III elements as standard offerings. The element design also prevents filter operation if the proper element is not in place.

Applications:

- Mobile Ag
- Mobile Construction
- Material Handlers
- Aerial Lifts
- Pilot lines
- Charge pump hydrostatic drives
- Industrial power units
- Machine tools

Specifications

Pressure Ratings:

Maximum Allowable
Operating Pressure (MAOP):
35 bar (500 psi)
Fatigue: 27.6 bar (400 psi)
1,000,000 cycles: 27.6 bar
Design Safety Factor: 2.5:1

Operating Temperatures:

Buna: -40°C to 107°C

Element Collapse Rating:

10.3 bar (150 psid)

Element Condition Indicators:

For predictive maintenance, 3 types of indicator are available: An electrical analogue or switch type indicator or a battery operated visual LED indicator.

Materials:

Head: die cast aluminium
Bypass valve: nylon with steel spring
Filter element: fibreglass and polyester
with nylon endcaps
Bowl: steel
Permanent core: steel

Weights (approximate):

Refer to Appendix for relationship to test standard ISO 4572.

Flow vs Pressure Loss

Coreless Spin-on Filters

12CS Series

Service Instructions 12CS

Filter Service

Filter element should be replaced as indicated by filter indicator gauge, or at specified service intervals recommended by the OEM.

Replacement element procedure

- A. Shut down system and release pressure in the filter line.
- B. Loosen bowl and remove rotating counter clockwise.
- C. Remove dirty element from filter head and discard.
- D. Lubricate element seals on clean element and install on filter head element locator.
- E. Install reusable bowl onto element and filter head.

15/40/80CN Series

Medium Pressure Filters
Max. 600 l/min - 70 bar

Premium performance for medium pressure applications

An economical 'multi-purpose' filter solution

The CN Series utilizes a cast aluminium head and spin-on bowl and can be specified with Microglass III or Ecoglass III filter media. Maximum pressure 70 bar. Maximum flow 600 l/min. Excellent performance value from a globally proven, reliable medium pressure filter.

Product Features:

- CN utilizes a cast aluminium head and bowl.
- Excellent fatigue pressure ratings.
- Maximum pressure 70 bar. Maximum flow 600 l/min.
- An economic 'multi-purpose' filter solution.

15/40/80CN Series

Medium Pressure Filters

Features & Benefits

Features	Advantages	Benefits
56 bar fatigue rating (eight times that of a spin-on)	Ability to provide reliable service under tough cyclic operating conditions	Reduced downtime due to premature filter failures
	Can be utilised in applications where high pressure filters may have been only option	Reduced costs, better "fit" for the application
Diametral (side) seal between head and bowl	Proven reliability in cyclic applications	No downtime, no leaks
	Reduced importance of bowl torque	Performs with "real world" service
Dust seal	Prevents contamination from building up on bowl/head threads	Easier service, eliminates thread galling
40CN-2 meets automotive HF3 standard	Automotive industry acceptance	Satisfies specifications without need for further testing and/or approval
15CN meets automotive HF2 standard		
Cast aluminium head	Low profile, lightweight and durable	Less weight, smaller envelop and cleaner appearance
Reinforced Microglass III replacement elements	Multi-layered design produced high capacity and efficiency	Great performance value
	Wire support reduces pleat bunching, keeps performance consistent	Reliable performance throughout element life Reduces downtime, maximises element life
Complete performance data disclosure	All pertinent information is provided in an easy-to-compare format	No hidden deficiencies
		Easy selection of proper filtration
Visual, electrical or electronic indicators available	Check element condition at a glance	Optimise element life, prevent bypassing
	Right style for the application	Matches your system electrical connections
Coreless Ecoglass III replacement elements	No metal content in element	Environmentally friendly disposal by incineration
	Reduced overall weight of 50%	Lower element replacement costs
	Easy compaction of used elements	Lower disposal cost
	Conversion kits available: new bowl with permanent core	Retrofit coreless design to housings already installed

Typical Applications

- Compressor lube oil
- Off-line filter loops
- Machine tools (Automotive standard)
- Hydrostatic drive charge pumps
- Mobile equipment
- Pilot lines for servo controls
- Oil patch drilling equipment
- Injection moulding

The Parker Filtration 15/40/80CN Series Medium Pressure Filters.

This partial list of applications for Parker "CN" Series Filters has a common factor, the need for an economical, medium pressure range filter with excellent fatigue pressure ratings. Prior to the availability of the "CN" filter, applications such as those listed were restricted by limitations of a spin-on can, or forced into the higher-cost range of high pressure filters.

The "CN" Series fills this gap and is now available with environmentally friendly Ecoglass III elements.

Specification

Pressure ratings:

Maximum allowable operating pressure: 70 bar
 Rated fatigue pressure: 56 bar

Connections:

Several threaded port options available, flange faced ports available on 80CN.

Connection style	Model	40CN	80CN
BSPF(G)	15CN, 3/4"	1 1/4", 1 1/2"	1 1/2", 2"
SAE	12, 16	16, 24	24, 32
ISO 6149	M27	M33	M42, M48
Metric 3000-M			2"

Filter housing:

Head material aluminium.
 Bowl material hard anodized aluminium.

Seal material:

Nitrile or fluoroelastomer.

Operating temperature range:

Seal material Nitrile: -40°C to +100°C.
 Seal material Fluoroelastomer: -20°C to +120°C.

Bypass valve & indicator settings:

Table following gives bypass valve and corresponding indicator setting.

Bypass	Indicator
1.7 bar	1.2 bar
3.5 bar	2.5 bar

Filter element:

Degree of filtration:

Determined by Multipass-test according to ISO 16889.

Flow fatigue characteristics:

Filter media is supported so that the optimal fatigue life is achieved (ISO 3724).

Microglass III (available by request)

Supported with epoxy coated metal wire mesh, end cap material reinforced composite and metal inner core. Collapse rating 20 bar (ISO 2941).

Ecoglass III

Supported with plastic net, end cap material reinforced composite. No metal parts. Collapse rating 10 bar (ISO 2941).
 Filter element can only be used together with bowl including Eco-adaptor.
 Note: Ecoglass III contributes to ISO 14001 quality.

Par-Gel:

Water removal media absorbent copolymer laminate media with ability to remove free water from mineral based and synthetic fluids available for 40CN and 80CN.

Indicator options:

- visual M3.
 - electronic F1 (PNP).
 - electrical T1.
 - electronic F2 (NPN).
- For indicator details see catalogue section 6.

Weights (kg):

Model	Length 1	Length 2
15CN	1.1	1.6
40CN	2.0	2.5
80CN	5.6	6.9

Fluid compatibility:

Suitable for use with mineral and vegetable oils, and some synthetic oils. For other fluids, please consult Parker Filtration.

Dimensions in mm (inch)

15/40/80CN Series

Medium Pressure Filters

80CN Flange Face Details (SAE 2" 3000-M)

Pressure Drop Curves

With 1.7 bar bypass the recommended initial pressure drop is max 0.5 bar.

With 3.5 bar bypass the recommended initial pressure drop is max 1.0 bar.

If the medium used has a viscosity different from 30 cSt, pressure drop over the filter can be estimated as follows:

The total $\Delta p = \text{housing } \Delta p_h + (\text{element } \Delta p_e \times \text{working viscosity}/30)$.

Medium Pressure Filters

Element Service

- A. Stop the system's power unit.
- B. Relieve any system pressure in the filter line.
- C. Drain the filter bowl if drain port option is provided.
- D. Loosen and remove bowl.
- E. Remove element by pulling downward with a slight twisting motion and discard.
- F. Check bowl o-ring and anti-extrusion ring for damage and replace if necessary.
- G. Lubricate element o-ring with system fluid and place on post in filter head.
- H. Install bowl by rotating counter clockwise and tighten to specified torque.
 - 15CN – 20-27 Nm (15-20ft. lbs)
 - 40CN – 57-68 Nm (42-50ft. lbs)
 - 80CN – 80-95 Nm (60-70ft. lbs)
- I. Confirm there are no leaks after powering the system.

45M/45 Eco Series

Medium Pressure Filters

Max 260 l/min - 40 bar

Ideal for harsh and demanding environments

Approved for engine rooms and mines

The 45M Series utilizes a cast iron head and steel bowl design and can be specified with Microglass III or Ecoglass III filter media. Maximum pressure 40 bar. Maximum flow 260 l/min. Lower element replacement costs and lower disposal costs

Product Features:

- 45M utilizes a cast iron head and steel bowl.
- Solves the problem of protecting system components at lower pressures.
- Maximum pressure 40 bar. Maximum flow 260 l/min.
- An ideal filter series for harsh environments.

45M/45 Eco Series

Medium Pressure Filters

Features & Benefits

Features	Advantages	Benefits
Cast iron head, steel bowl	Can be used in applications where aluminium is not allowed	Approved for engine rooms and mines
	Rugged construction	Reliable filtration in all conditions
Reinforced Microglass III replacement elements	Multi-layered design produced high capacity and efficiency	Great performance value
	Wire support reduces pleat bunching, keeps performance consistent	Reliable performance throughout element life Reduces downtime, maximises element life
Visual, electrical or electronic indicators available	Check element condition at glance	Optimise element life, prevent bypassing
	Right style for the application	Matches your system electrical connections
Test points in the filter head	Pressure measurement and Δp possible	Quick testing and maintenance
Coreless Ecoglass III replacement elements	No metal content in element	Environmentally friendly disposal by incineration
	Reduced overall weight of 50%	Lower element replacement costs
	Easy compaction of used elements	Lower disposal costs
	Eco adaptors available	Retrofit coreless design to housings already installed

Typical Applications

- Industrial power units
- Mobile construction equipment
- Forestry equipment

The Parker Filtration 45M/45 Eco Series Medium Pressure Filters.

The 45M/45 Eco Series of medium pressure filters offer an ideal solution to the problem of protecting system components at lower pressures.

The robust filter housing of the 45M allows the product to be applied in harsh environments. Filter bowl is designed for rapid element replacement. ECO Series elements reduces the waste over 50% due to the reusable element core.

Specification

Pressure ratings:

Maximum allowable operating pressure 40 bar.
Filter housing pressure pulse fatigue tested: 10⁶ pulses 0-40 bar.

Connections:

Threads G1, G1¹/₄ (ISO 228/1) or flange SAE 1¹/₂" 3000-M.

Filter housing:

Head material cast iron (GSI).
Bowl material steel.

Seal material:

Nitrile or Fluoroelastomer.

Operating temperature range:

Seal material Nitrile: -40° to +100°C.
Seal material Fluoroelastomer: -20° to +120°C.

Bypass valve:

Opening pressure 3.5 bar.

Filter element:

Degree of filtration:

Determined by Multipass-test according to ISO 16889.

Flow fatigue characteristics:

Filter media is supported so that the optimal fatigue life is achieved (ISO 3724).

Microglass III:

Supported with epoxy coated metal wire mesh, end cap material reinforced composite and metal inner core.
Collapse rating 20 bar (ISO 2941).

Ecoglass III:

Supported with plastic net, end cap material reinforced composite. No metal parts. Collapse rating 10 bar (ISO 2941).
Filter element can only be used together with reusable FEA Eco-adapter.
Note: Ecoglass III contributes to ISO 14001 quality.

Indicator options:

Indicating differential pressure: 2.5 ± 0.3 bar.

- visual M3.
- electrical T1.
- electronic F1(PNP).
- electronic F2(NPN).

For indicator details see catalogue section 6.

Fluid compatibility:

Suitable for use with mineral and vegetable oils, and some synthetic oils. For other fluids, please consult Parker Filtration.

45M/45 Eco Series

Medium Pressure Filters

Pressure Drop Curves

The recommended level of the initial pressure drop is max 1.0 bar.

If the medium used has a viscosity different from 30 cSt, pressure drop over the filter can be estimated as follows:

The total Δp = housing Δp_h + (element $\Delta p_e \times \text{working viscosity}/30$).

15P/30P Series

High Pressure Filters
Max 200 l/min - 207 bar

When it comes to lightweight filter solutions

Compact aluminium housing and lightweight design

The 15P/30P Series utilizes a compact aluminium housing with 2 head sizes and 2 bowl lengths, large ports and wide flow paths. Maximum pressure 207 bar. Maximum flow 200 l/min. Efficient filtration and maximized element life.

Product Features:

- 15P/30P utilizes a compact aluminium housing with 2 head sizes and 2 bowl lengths.
- Microglass III filter media.
- Maximum pressure 207 bar. Maximum flow 200 l/min.
- A quality filter for better control and long component life.

15P/30P Series

High Pressure Filters

Features & Benefits

Features	Advantages	Benefits
Compact aluminium housing	Light weight but still robust design	Reliable and continuous operation both in mobile and industrial applications
Two head sizes and two bowl lengths	Optimised sizing	Efficient filtration
		Right filter for each application
Large ports and wide flow paths	Low differential pressure across housing and element	Higher flow rates possible
		Less lost energy
Microglass III replacement elements	Multi-layered design produced high capacity and efficiency	Great performance value
		Reliable performance throughout element life
Visual, electrical and electronic indicators available	Wire support reduces pleat bunching, keeps performance consistent	Reduces downtime, maximises element life
	Check element condition at a glance	Optimise element life, prevent bypassing
	Right style for the application	Matches your system electrical connections

Typical Applications

- Saw mills
- Aircraft ground support equipment
- Asphalt pavers
- Hydraulic fan drives
- Power steering circuits
- Domestic refuse vehicles
- Cement trucks
- Servo control protection
- Logging equipment

The Parker Filtration 15P/30P Series High Pressure Filters.

These application examples have one thing in common...the need for clean hydraulic fluid.

Modern high pressure hydraulic systems are demanding. Better controls and long component life are expected. To deliver the high standards of performance, hydraulic components are built with tighter tolerances which increases their sensitivity to contamination.

That's where Parker pressure filters come into play. They filter out ingressed contamination before it jams a valve or scores a cylinder. They block pump generated debris before it gets to servo or proportional valves. Parker pressure filters are a key ingredient in meeting today's system demands.

Put your hydraulic systems in the care of Parker Filtration. We are committed to designing and building the best filters available to industry.

Specification

Pressure ratings:

Maximum allowable operating pressure 207 bar.
Filter housing pressure pulse fatigue tested: 138 bar.

Connections:

Inlet and outlet connections are threaded.

Connection style	Model	
BSPF(G)	15P	30P
ISO 6149	3/4"	1"
	M27	M33

Filter housing:

Head material extruded aluminium (anodised 6061-T6).
Bowl material impacted aluminium (anodised 6061-T6).

Seal material:

Nitrile or Fluoroelastomer.

Operating temperature range:

Seal material Nitrile: -40 °C to +100 °C.
Seal material Fluoroelastomer: -20 °C to +120 °C.

Bypass valve:

Opening pressure 3.5 bar.

Filter element:

Degree of filtration:
Determined by multipass-test according to ISO 16889.

Flow fatigue characteristics:

Filter media is supported so that the optimal fatigue life is achieved (ISO 3724).

Microglass III:

Supported with epoxy coated metal wire mesh, end cap material reinforced composite and metal inner core. Collapse rating 24 bar (ISO 2941).

High collapse elements:

High collapse elements available. For details please contact Parker Filtration.

Indicator options:

Indicating differential pressure: 2.5 ± 0.3 bar.

- visual M3.
 - electrical T1.
 - electronic F1 (PNP).
 - electronic F2 (NPN).
- For indicator details see catalogue section 6.

Weights (kg):

Model	Length 1	Length 2
15P	1.6	2.1
30P	2.9	3.9

Fluid compatibility:

Suitable for use with mineral and vegetable oils, and some synthetic oils. For other fluids, please consult Parker Filtration.

Pressure Drop Curves

The recommended level of the initial pressure drop is max. 1.2 bar.

If the medium used has a viscosity different from 30 cSt, pressure drop over the filter can be estimated as follows:

$$\Delta p = (\Delta p_{30} \times \text{viscosity of medium used}) / 30 \text{ cSt.}$$

100P Series

High Pressure Filters

Max 1000 l/min - 414 bar

When it comes to high flow capacity for high pressure systems

A high flow rate filter solution

The 100P Series design means on element change only the bowl end-cap has to be removed. Microglass III glassfibre media is standard. Maximum pressure 414 bar. Maximum flow 1000 l/min. An ideal solution where space is at a premium.

Product Features:

- 100P design, only the bowl end-cap is removed on element change.
- Microglass III glassfibre media is standard.
- Maximum pressure 414 bar. Maximum flow 1000 l/min.
- An ideal solution where space is at a premium.

100P Series

High Pressure Filters

Features & Benefits

Features	Advantages	Benefits
High 414 bar pressure rating	Strong and robust housing for heavy duty applications	Reliable and continuous operation for open and closed loop applications
Flow rates up to 1000 l/min	Pressure filtration possible for high flow rates	Excellent protection of high performance machinery
Optional reverse flow valve	Allows reverse flow and prevents back wash of element	Ideal for applications where back flow is expected
Bottom access bowl	Only bottom of the bowl must be opened for element change	Easy service
Microglass III replacement elements	Multi-layered design produced high capacity and efficiency	Great performance value
	Wire support reduces pleat bunching, keeps performance consistent	Reliable performance throughout element life
Visual and electrical indicators available	Check element condition at a glance	Reduces downtime, maximises element life
	Right style for the application	Optimises element life, prevents bypassing
		Matches your system electrical connections

Typical Applications

- Drilling rigs
- Power packs
- Oil/gas industry
- Flight simulators
- Test rigs

The Parker Filtration Model 100P High Pressure Filters.

The 100P Series is designed to meet the growing demand for high-pressure filters with a flow rate capacity of up to 1000 l/min at 414 bar working pressure. For systems where reverse flow can be expected, an optional integrated reverse flow valve avoids back wash of contamination. When changing the element, only the end cap of the bowl has to be removed. The filter is ideal for applications where space is at a premium. The filter media used in the elements is high quality Microglass III glass fibre.

Specification

Pressure ratings:

Maximum allowable operating pressure 414 bar.
Filter housing pressure pulse fatigue tested: 3×10^6 pulses 0 - 276 bar.

Connections:

Inlet and outlet connections are threaded internally or flange faced.
Threads G1½", G2" (ISO 228/1), SAE 24, SAE 32.
or flanges 1½" SAE 6000, 2" SAE 6000, 1½" SAE 6000-M, 2" SAE 6000-M.
*6000-M is a SAE style with appropriate metric fixing threads.

Filter housing:

Head material cast iron (GSI).
Bowl material extruded steel, max torque 200 Nm.

Seal material:

Nitrile or Fluoroelastomer.

Operating temperature range:

Seal material Nitrile: - 40 °C to +100 °C.
Seal material Fluoroelastomer: - 20 °C to +120 °C.

Bypass valve:

Opening pressure 7.0 bar.

Options:

Reverse flow valve, which directs back flow from port to port.

Filter element:

Degree of filtration:

Determined by Multipass-test according to ISO 16889.

Flow fatigue characteristics:

Filter media is supported so that the optimal fatigue life is achieved (ISO 3724).

Microglass III:

Supported with epoxy coated metal wire mesh, end cap material reinforced composite and metal inner core.
Collapse rating 20 bar (ISO 2941).

Indicator options:

Indicating differential pressure: 5.0 bar.
- visual indicator.
- electrical indicator.

Weights (kg):

100P-1: 37 kg.
100P-2: 47 kg.

Fluid compatibility:

Suitable for use with mineral and vegetable oils, and some synthetic oils. For other fluids, please consult Parker Filtration.

Installation Details

Note: For installation drawings of the SAE 1½" and 2" flanges, contact Parker.

Reverse Flow Condition

Pressure Drop Curves

The recommended level of the initial pressure drop is max. 2.3 bar.

If the medium used has a viscosity different from 30 cSt, pressure drop can be estimated as follows:

The total $\Delta p = \text{housing } \Delta p + (\text{element } \Delta p_e \times \text{working viscosity}/30)$.

100P-1 Empty Housing (G1½", SAE 24, SAE 1½")

EPF *iprotect*[®]

(Ecological Pressure Filter)

High Pressure Filters
Max 700 l/min - 450 bar

A compact, cost effective pressure filter solution

Designed with the *iprotect*[®] patented filtration technology

The Parker EPF *iprotect*[®] (Ecological High Pressure Filter) is designed to provide high quality filtration of hydraulic systems, providing new possibilities to reduce the cost of ownership by improving their productivity and profitability.

A radical, innovative approach was applied with the design of the EPF *iprotect*[®], suitable for a flow capacity up to 700 l/min at 450 bar working pressure.

A new patented design of the filter element allows integration of the bypass valve and element core as re-usable parts in the filter bowl.

This makes the product fool proof as there is no risk of forgetting to re-install re-usable parts.

With less space being available for filters, Parker has taken on board the requirement to provide more compact solutions. A unique feature is the filter element remains inside the filter bowl when changing the filter element. This can save over 500mm of space envelope in comparison with traditional high pressure filters.

Product Features:

The patented element design guarantees the quality of filtration, which directly impacts the oil cleanliness level as the usage of pirate type after market filters with unknown quality of filter media is excluded. This in-built safety has a direct, positive impact on the productivity and profitability of equipment.

- Guaranteed quality of filtration
- More compact solutions are possible
- Filter element remains in filter bowl during filter service
- Reduce waste of 50%
- No risk of installation mistakes due to a 'foolproof' design
- Unique OEM branding opportunities
- Easy to integrate into hydraulic manifold solutions

Features	Advantages	Benefits
Patented filter element	Avoid use of non-genuine parts	Guaranteed quality of filtration
Filter element remains in filter bowl	Less space needed to change/service filter	More compact solutions are possible Reduce service time for filter over 40%
Environmentally-friendly design	Reduces environmental waste over 50%	Lower disposal cost
Service-friendly product design	No handling of loose re-usable parts	No risk of making mistakes during change of element
Bypass valve integral part of filter bowl	Easy to integrate in manifold systems	More compact and lower cost of manifold (only one cavity is needed)
	Lower pressure lost across filter	Saving energy, improving system efficiency
Wide range of differential pressure indicators	Continuous feedback of condition filter elements	Optimizing filter element life
		Contributes to scheduled maintenance

Typical Applications

- Mobile working hydraulics
- Mobile drive system
- Pilot line filtration
- Servo controls
- Reverse flow valve applications
- Industrial working hydraulics
- Control systems

The Parker EPF *iprotect*[®] series patented bypass valve technology

Bypass settings are available up to 7 bar or completely blocked in conjunction with patented, high strength filter elements. The principle is

based on differential pressure measurement across the filter element. During bypass only a part of the mainflow is flowing through the bypass valve.

Epf *iprotect*[®] applies the latest generation of Microglass III filter media. The patented element design guarantees the quality of filtration.

Protecting your system and the environment

Protect your system performance and profit

The new *iprotect*® generation of filter elements provide high filtration performance combined with Parker technology. The bespoke design prevents the use of pirate type alternatives.

Less space needed to accommodate the filter

More compact solutions are possible as the filter element remains in the filter bowl during change of filter element. Compared to traditional solutions it does not only save space, it also reduces the required manual handling during the filter change process.

Saving cost and our environment

What does it take to introduce a new ground-breaking design which saves the environment? Parker's EPF *iprotect*® applies a re-usable element core and bypass, both integral parts of the filter bowl. This solution avoids the handling of re-usable parts during element change and reduces over 50% disposal weight.

Smart valve technology

Parker hydraulic control valve technology is applied for the reusable bypass valve. This leakage-free valve has a patented interface with the filter element, which ensures that genuine parts are always applied. With bypass settings up to 7 bar filtration during cold start conditions, more compact solutions, can be realised. The valve also optimizes the flow path, reducing the pressure lost across the filter.

Easier to integrate

Parker has set the trend to integrate filtration into manifolds. With Parker's EPF *iprotect*® we have taken the design one step further. Only one cavity is needed to accommodate the filter instead of two, this is because the re-usable bypass valve is integrated into the filter bowl, reducing space and cost.

Customized solutions

Parker's motion & control technologies provide new opportunities for our customers. Customized manifolds or duplex filters, as in this example offer complete automatic change-over. The EPF *iprotect*® contributes to realizing new solutions, improving your productivity and profitability.

A protective 'gene'

The performance and profitability of systems directly depends upon the filter media.

It goes without saying that Parker's products aim to avoid the use of unknown filter performance, jeopardizing safety and performance. Our Microglass III media is continuously upgraded and acts as a protective 'gene' in the system.

When going into reverse

Parker's EPF can be equipped with an optional reverse flow. This valve assembly is integrated in the element end cap and isolates the filter medium during reverse flow conditions.

A new design of the filter element allows integration of the bypass valve and element core as re-usable parts in the filter bowl. This results in cost reduction when integrating the high pressure filter in manifold type solutions. But it also reduces the waste when changing the filter element by over 50% as the element core is an integral part of the filter bowl.

The design of the EPF *iprotect*®, is unique, there is no need to re-install any re-usable parts as with some other filters in the market. This makes the product fool proof as there is no risk of forgetting to re-install re-usable parts.

Replacing the filter element:

- Drain the filter housing using the plugged drain port.
- Thanks to the filter lock the element remains in the bowl.
- Pull out the old element. The re-usable element core and bypass valve are integral parts of the bowl.
- Filtration is from 'Out to In,' the element core is located in the clean oil side.
- Just drop the new element in the bowl.
- Screw the bowl, including element into the filter head.

EPF *iprotect*® - Size 1 (Inline)

EPF *i*protect® Size 1 Pressure Drop Curves

With 3.5 bar bypass the recommended initial pressure drop max is 1.2 bar

With 7.0 bar bypass the recommended initial pressure drop max is 2.3 bar

If the medium used has a viscosity different from 30cSt, pressure drop over the filter can be estimated as follows:

The total $\Delta p = \text{housing } \Delta p_h + (\text{element } \Delta p_e \times \text{working viscosity}/30)$.

Note 1: For non-bypass please select High strength element type QIH
Note 2: For ATEX classified filters add EX after the code. ATEX certified filters with electrical indicator are available on request. Visual indicators are classified as Category 2, non electrical equipment. Filter assemblies with EX code will be supplied with a dedicated name plate.
Pis consult Parker Filtration for any questions related to the classification of our products.

EAPF iprotect®

(Ecological ATEX Pressure Filter)

High Pressure Stainless Steel Filters
Max 120 l/min - 690 bar

Safety is a process that never stops

Designed with the iprotect® patented filtration technology

The Parker EAPF iprotect® is designed to provide high quality filtration of hydraulic systems, providing new possibilities reduce the cost of ownership by improving their productivity and profitability.

Meeting the stringent demands of the Marine, Oil & Gas and process equipment markets, the EAPF iprotect® covers a range up to 120 l/min at 690 bar working pressure.

A radical, innovative approach was applied, utilising a new patented design of the filter element providing a high level of embedded safety. Thanks to the patented product design, a service-friendly product has resulted which avoids the use of pirate-type spare parts with unknown quality of filtration. The iprotect® product applies a re-usable element core which can be combined with a bypass valve, reducing the environmental impact over 50% typically.

The EAPF applies twin seal technology. One seal ensures that seawater and contamination cannot ingress the threaded connection between the filter head and bowl. A special hole pattern is applied in the bowl for decompression of the threaded area, this ensures maximum sealing performance of the main seal.

Combined with the flexibility of various connection types (NPT, BSP, Autoclave) and optional versions with integrated check valves to handle system back flushing, the modular EAPF range provides effective integration of high pressure filter solutions in hydraulic systems.

Product Features:

The patented element design guarantees the quality of filtration, which directly impacts the oil cleanliness level as the usage of pirate-type after market filters with unknown quality of filtration is excluded. This in-build safety has a direct, positive impact on the safety, productivity and profitability of equipment.

- Duplex stainless steel housing
- 690 bar rated filter housing
- Twin Seal concept for maximum protection and seal performance
- iprotect® patented filter element
- Wide range of fibreglass and stainless steel mesh filter media
- Optional versions for back-flush systems
- ATEX certified filter housing and indicators
- Coated filter housing to prevent grating of threaded connections

Features	Advantages	Benefits
Patented filter element	Avoid use of non-genuine parts	Guaranteed quality of filtration
Service element remains in filter bowl	Less space needed to change/service the filter	More compact solutions are possible
Environmentally-friendly design	Reduces environmental waste over 50%	Lower disposal cost
Service-friendly product design	No handling of loose re-usable parts	No risk of making mistakes while servicing the filter
Twin-Seal technology	Improved sealing of filter housing parts	Lower risk of leakage
		No corrosion of threaded connection filter head and bowl
Wide range of indicators	Continuous feedback of condition filter elements	Optimising filter element life time
		Contributes to scheduled maintenance
Coated filter housing	Prevents grating of threaded filter head and bowl	Long life time of filter housing

Typical Applications

- Drilling equipment
- Lifting equipment
- Sub sea systems
- Deck equipment
- Flushing rigs
- Chemical injection

The Parker EAPF *iprotect*® series patented bypass valve technology

Bypass settings are available up to 7 bar or completely blocked in conjunction with patented, high strength filter elements. The principle is based on differential pressure measurement

across the filter element. During bypass only a part of the main flow is flowing through the bypass valve.

Protecting your system and the environment

Protect your system performance and profit

The new *iprotect*® generation of filter elements provide high filtration performance combined with patented technology. The bespoke design prevents the use of pirate type alternatives.

Less space needed to accommodate the filter

More compact solutions are possible as the filter element remains in the filter bowl during change of filter element. Compared to traditional solutions it does not only save space, it also reduces the required manual handling during the filter change process.

Saving cost and our environment

What does it take to introduce a new ground-breaking design which saves the environment? Parker's EAPF *iprotect*® applies a re-usable element core and bypass, both integral parts of the filter bowl. This solution avoids the handling of re-usable parts during element change and reduces over 50% disposal weight.

Smart valve technology

Parker hydraulic control valve technology is applied for the reusable bypass valve. This leakage-free valve has a patented interface with the filter element, which ensures that genuine parts are always applied. With bypass settings up to 7 bar filtration during cold start conditions, more compact solutions, can be realised. The valve also optimises the flow path, reducing the pressure lost across the filter.

Easier to integrate

Parker has set the trend to integrate filtration into manifolds. With Parker's EAPF *iprotect*® we have taken the design one step further. Only one cavity is needed to accommodate the filter instead of two, this is because the re-usable bypass valve is integrated into the filter bowl, reducing space and cost.

Customised solutions

Parker's motion & control technologies provide new opportunities for our customers. Customised manifolds or duplex filters, as in this example offer complete automatic change-over. The EAPF *iprotect*® contributes to realizing new solutions, improving your productivity and profitability.

A protective 'gene'

The performance and profitability of systems directly depends upon the filter media.

It goes without saying that Parker's patented products aim to avoid the use of unknown filter performance, jeopardising safety and performance. Our III media is continuously upgraded and acts as a protective 'gene' in the system.

When going into reverse

Parker's EAPF can be equipped with an optional reverse flow. This valve assembly is integrated in the element end cap and isolates the filter medium during reverse flow conditions.

A new patented design of the filter element allows integration of the bypass valve and element core as re-usable parts in the filter bowl. This results in cost reduction when integrating the high pressure filter in manifold type solutions. But it also reduces the waste when changing the filter element by over 50% as the element core is an integral part of the filter bowl.

The design of the EAPF *iprotect*®, is unique, there is no need to re-install any re-usable parts as with some other filters in the market. This makes the product fool proof as there is no risk of forgetting to re-install re-usable parts.

Replacing the filter element:

- Drain the filter housing using the plugged drain port.
- Thanks to the filter lock the element remains in the bowl.
- Pull out the old element. The re-usable element core and bypass valve are integral parts of the bowl.
- Filtration is from 'Out to In,' the element core is located in the clean oil side.
- Just drop the new element in the bowl.
- Screw the bowl, including element into the filter head.

EMDPF *iprotect*[®]

(Manually Operated High Pressure Duplex Filter)

High Pressure Filters
Max. 300 l/min - 420 bar

A compact, cost effective pressure filter solution

Designed with the *iprotect*[®] patented filtration technology

The Parker EMDPF *iprotect*[®] duplex filter is designed to provide high quality filtration of hydraulic and lubrication type systems, providing new possibilities to reduce the cost of ownership by improving productivity and profitability.

A radical, innovative approach was applied with the design of the EMDPF duplex family. The standard range covers a flow capacity up to 300 l/min at 420 bar working pressure.

A new patented design of the filter element allows integration of the bypass valve and element core as re-usable parts in the filter bowl. This makes the product foolproof as there is no risk of forgetting to re-install re-usable parts.

Because the filter element remains in the bowl during service events, less space is needed to change the filter element.

The EMDPF features various safety functions such as integrated pressure equalizing line, pressure peak protection of the element indicator and low torque for switching the ball valve. High quality seal technology makes the change of the filter element possible with the system able to continue operating.

Product Features:

The Parker element design guarantees the quality of filtration, which directly impacts on the oil cleanliness level as the usage of pirate type after market filters with unknown quality of filter media is excluded. This in-build safety has a direct, positive impact on the productivity of equipment.

- Guaranteed quality of filtration
- Filter element remains in-bowl during service
- Maximum use of re-usable parts
- Integrated safety functions
- Unique OEM branding opportunities
- No risk of installation mistakes due to a foolproof design

EMDPF *iprotect*[®]

High Pressure Filters

Features	Advantages	Benefits
Patented filter element	Avoid use of non-genuine parts	Guaranteed quality of filtration
Filter element remains in filter bowl	Less space needed to change/service filter	More compact solutions are possible Reduce service time for filter by over 40%
Environmentally-friendly design	Reduces environmental waste over 50%	Lower disposal cost
Service-friendly product design	No handling of loose re-usable parts	No risk of making mistakes during change of element
Bypass valve integral part of filter bowl	Easy to integrate in manifold systems	More compact and lower cost of manifold (only one cavity is needed)
	Lower pressure loss across filter	Saving energy, improving system efficiency
Wide range of differential pressure indicators	Continuous feedback of filter element condition	Optimizing filter element life
		Contributes to scheduled maintenance

Typical Applications

- Servo controls
- Industrial working hydraulics
- Control systems

The Parker EMDPF *iprotect*[®] series patented bypass valve technology

Bypass settings are available up to 7 bar or completely blocked in conjunction with patented, high strength filter elements. The principle is

based on differential pressure measurement across the filter element. During bypass only a part of the main flow is flowing through the bypass valve.

EMDPF *iprotect*[®] applies the latest generation of Microglass III filter media. The patented element design guarantees the quality of filtration.

Protecting your system and the environment

Protect your system performance and profit

The new *i*protect® generation of filter elements provide high filtration performance combined with Parker technology. The bespoke design prevents the use of pirate type alternatives.

Less space needed to accommodate the filter

More compact solutions are possible as the filter element remains in the filter bowl during change of filter element. Compared to traditional solutions it does not only save space, it also reduces the required manual handling during the filter change process.

Saving cost and our environment

What does it take to introduce a new ground-breaking design which saves the environment? Parker's EMDPF *i*protect® applies a re-usable element core and bypass, both integral parts of the filter bowl. This solution avoids the handling of re-usable parts during element change and reduces over 50% disposal weight.

Smart valve technology

Parker hydraulic control valve technology is applied for the reusable bypass valve. This leakage-free valve has a patented interface with the filter element, which ensures that genuine parts are always applied. With bypass settings up to 7 bar filtration during cold start conditions, more compact solutions, can be realised. The valve also optimizes the flow path, reducing the pressure lost across the filter.

Easier to integrate

Parker has set the trend to integrate filtration into manifolds. With Parker's EMDPF *i*protect® we have taken the design one step further.

Only one cavity is needed to accommodate the filter instead of two, this is because the re-usable bypass valve is integrated into the filter bowl, reducing space and cost.

Customized solutions

Parker's motion & control technologies provide new opportunities for our customers. Customized manifolds or duplex filters, as in this example offer complete automatic change-over. The EMDPF *i*protect® contributes to realizing new solutions, improving your productivity and profitability.

A protective 'gene'

The performance and profitability of systems directly depends upon the filter media.

It goes without saying that Parker's products aim to avoid the use of unknown filter performance, jeopardizing safety and performance. Our Microglass III media is continuously upgraded and acts as a protective 'gene' in the system.

When going into reverse

Parker's EMDPF can be equipped with an optional reverse flow. This valve assembly is integrated in the element end cap and isolates the filter medium during reverse flow conditions.

A new design of the filter element allows integration of the bypass valve and element core as re-usable parts in the filter bowl. This results in cost reduction when integrating the high pressure filter in manifold type solutions. But it also reduces the waste when changing the filter element by over 50% as the element core is an integral part of the filter bowl.

The design of the EMDPF *i*protect®, is unique, there is no need to re-install any re-usable parts as with some other filters in the market. This makes the product fool proof as there is no risk of forgetting to re-install re-usable parts.

Replacing the filter element:

- Drain the filter housing using the plugged drain port.
- Thanks to the filter lock the element remains in the bowl.
- Pull out the old element. The re-usable element core and bypass valve are integral parts of the bowl.
- Filtration is from 'Out to In,' the element core is located in the clean oil side.
- Just drop the new element in the bowl.
- Screw the bowl, including element into the filter head.

EMDPF *iprotect*®

Circuit diagram

EMDPF *iprotect*®

Principle of Operation

The EMDPF *iprotect*® features a 3/2-way ball valve to control the main flow through the filter. This 3/2-way ball valve is manual operated.

To avoid excessive pressure peaks during the change-over process, Parker's EMDPF features an integrated equalizing line. Using a needle valve this equalizing line is opened before changing-over the main 3/2-way ball valve. After change-over this equalizing line needs to be closed.

Two one-way flow valves are integrated in the filter to avoid unwanted reverse flow of oil through the filter element.

Parker recommends applying a differential pressure indicator to obtain information about the condition of the filter element. A wide range of visual, electrical and electronic type indicators are available.

The differential pressure indicator is protected against excessive pressure peaks by using an integrated shutter valve in the sensing lines. Min and Mout are plugged measurement connection points.

Applying Innovation

EMDPF iprotect and the icount Condition Monitoring Family

EMDPF iprotect® and icount Particle Detection

Parker's worldwide experience in Fluid Condition Monitoring and Contamination Control

Parker's ability to provide engineered solutions is embedded in the modular product architecture when it comes to filtration and condition monitoring solutions.

Besides protecting the system against contamination by applying quality filtration, the importance of having real-time information about the system cleanliness level or oil condition is becoming more important.

Based on customized manifolds, unique opportunities are present to combine or integrate condition monitoring sensors with our filters.

icount Particle Detection

The icount PD Particle Detector from Parker represents the most up to date technology in particle detection. The robust design of

the housing allows operation in heavy duty environments.

The on-board laser based technology provides direct information about the fluid cleanliness level.

By implementing particle detection, important information about the system contamination trends can be obtained. Integrated LED or digital displays provide indication of low, medium and high contamination levels.

Moisture measurement

Moisture is the second largest source of contamination after solid type contamination. Both account for over 80% of failures of hydraulic systems.

High moisture levels accelerate the process of oil degradation, having direct negative impact on the fluid's performance. Hydraulic fluids are engineered to provide high performance lubrication, protection against corrosion and energy transfer. Oil degradation reduces the fluid life time and as a consequence, the life time of components when efficient lubrication is no longer provided.

By measuring the fluid's moisture level, adequate maintenance can be scheduled in time before system breakdowns or excessive wear & tear to system components occur.

The MS moisture sensor range can be integrated in customized manifold blocks.

The icount particle detector family can also be equipped with an optional moisture sensor.

EADPF *iprotect*® Series

High Pressure Duplex Filters

Max. 320 l/min - 350 bar

Automatic duplex filters increase safety

New patented duplex filter technology offers continuous automated protection

The EADPF Series utilizes a unique patented element design named *iprotect*®. The ecological design reduces environmental impact over 50% typically and covers flow rates up to 320 l/min at 350 bar. This 'smart' element is integrated into a duplex head featuring a fully automatic change over. One or two differential pressure indicators are used to control the duplex filter. A unique aspect is that the system pressure is used for the pilot lines operating the flow control valves, isolating or putting the filter bowl with the clean element into service.

Product Features:

- The quality of filtration is protected.
- Rated at 350 bar for flows up to 320 l/min.
- Multiple bypass settings up to 7 bar or blocked with 210 bar rated high collapse element.
- EADPF duplex filters feature fully automatic element change-over.
- For more information contact Parker Filtration.

Important Information

WARNING-USER RESPONSIBILITY

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

- This document and other information from Parker-Hannifin Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise.
- The user, through their own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety and warning requirements of the applications are met.

The user must analyse all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalogue and in any other materials provided from Parker or its subsidiaries or authorized distributors.

- To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems.

The operation of the products described here in is subject to the operating and safety procedures details of which are available upon request.

Sales conditions

The items described in this document are available for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. Any sale contract entered into by Parker will be governed by the provisions stated in Parker's standard terms and conditions of sale (copy available upon request)

18/28/38P Series

High Pressure Filters
Max 700 l/min - 414 bar

The all-round high pressure filter solution

Robust housing for heavy duty applications

The 18/28/38P Series features a range of head and bowl sizes and connection options. Microglass III glassfibre media is standard. Maximum pressure 414 bar. Maximum flow 700 l/min. A globally proven filter with optimized sizing for a wide range of industrial applications.

Product Features:

- Multiple bypass settings up to 7 bar.
- 18/28/38P features a range of head and bowl sizes and connection options.
- Microglass III glassfibre media is standard.
- Maximum pressure 414 bar. Maximum flow 700 l/min.
- A proven filter solution for 'heavy duty' hydraulic systems.

18/28/38P Series

High Pressure Filters

Features & Benefits

Features	Advantages	Benefits
Fatigue tested to full pressure rating	Strong and robust housing for heavy duty applications	Reliable and continuous operation both in mobile and industrial applications
Several head sizes	Optimised sizing	Efficient filtration Covers wide flow range
Several connection options	Easy mounting	Global design, global acceptance Right filter for each application
Microglass III replacement elements	Multi-layered design produced high capacity and efficiency	Great performance value
	Wire support reduces pleat bunching, keeps performance consistent	Reliable performance throughout element life Reduces downtime, maximises element life
Visual, electrical and electronic indicators available	Check element condition at a glance	Optimises element life, prevents bypassing
	Right style for the application	Matches your system electrical connections

Typical Applications

- Injection moulding
- Die casting
- Servo controls
- Machine tools
- Mobile equipment

The Parker Filtration 18/28/38P Series High Pressure Filters

Parker Filtration engineered the 18/28/38P series of high pressure filters to satisfy demanding applications in the mobile and industrial markets throughout the world. With metric mounting and optional ISO 6149 ports, this new series is truly a global design.

Installed downstream of the pump, this new series with their wide range of high capacity Microglass III elements, offer excellent protection to system components.

Standard filters come complete with industry proven spool type bypass valve. For more critical applications such as servo or proportional controls, a no bypass high strength element combination ensures maximum protection.

The modular low hysteresis differential pressure indicator fitted to this series is unrivaled in its performance. Tests prove its accuracy and foolproof design to be a major advance in indicator technology.

Specification

Pressure ratings:

Maximum allowable operating pressure 414 bar.
 Filter housing pressure pulse fatigue tested: 10⁶ pulses 0 - 414 bar.

Connections:

Inlet and outlet connections are threaded internally or flange faced.

Connection style	Model		
	18P	28P	38P
BSPF(G)	3/4"	1"	1 1/4", 1 1/2"
SAE	12	16	20, 24
ISO 6149	M27	M33	M42, M48
Flange SAE 6000	3/4"	1"	1 1/4"
Flange SAE 6000-M*	3/4"	1"	1 1/4"

*6000-M is a SAE style with appropriate metric fixing threads.

Filter housing:

Head material cast iron (GSI).
 Bowl material steel.

Seal material:

Nitrile or Fluoroelastomer.

Operating temperature range:

Seal material Nitrile: -40 °C to +100 °C.
 Seal material Fluoroelastomer: -20 °C to +120 °C.

Bypass valve & indicator settings:

Table below gives bypass valve and corresponding indicator setting.

Bypass	Indicator
3.5 bar	2.5 bar
7.0 bar	5.0 bar

Filter element:

Degree of filtration:

Determined by multipass-test according to ISO 16889.

Flow fatigue characteristics:

Filter media is supported so that the optimal fatigue life is achieved (ISO 3724).

Microglass III:

Supported with epoxy coated metal wire mesh, end cap material reinforced composite and metal inner core. Collapse rating 20 bar (ISO 2941).

High collapse elements:

(To be used when no bypass function in filter housing).
 Microglass III media supported with epoxy coated metal wire mesh on upstream and stainless steel on downstream, end cap material steel. Strong metal inner core. Collapse rating 210 bar (ISO 2941).

Indicator options:

Indicating differential pressure: 2.5 ± 0.3 bar or 5.0 ± 0.5 bar.
 - visual M3.
 - electrical T1.
 - electronic F1(PNP).
 - electronic F2(NPN).

For indicator details see catalogue section 6.

Weights (kg):

Model	Length 1	Length 2
18P	4.2	5.7
28P	6.7	9.2
38P	15.8	20.3

Fluid compatibility:

Suitable for use with mineral and vegetable oils, and some synthetic oils. For other fluids, please consult Parker Filtration.

Pressure Drop Curves

With 3.5 bar bypass the recommended initial pressure drop is max 1.2 bar.

With 7.0 bar bypass the recommended initial pressure drop is max 2.3 bar.

If the medium used has a viscosity different from 30 cSt, pressure drop over the filter can be estimated as follows:

The total Δp = housing Δp_h + (element $\Delta p_e \times \text{working viscosity}/30$).

Element Service

- A. Stop the system's power unit.
- B. Relieve any system pressure in the filter line.
- C. Drain the filter bowl if drain port option is provided.
- D. Rotate the bowl clockwise (left) and remove.
- E. Remove element by pulling downward with a slight twisting motion and discard.
- F. Check bowl o-ring and anti-extrusion ring for damage and replace if necessary.
- G. Lubricate element o-ring with system fluid and locate element in filter head.
- H. Install bowl by rotating counter-clockwise (right) and tighten to specified torque.
 - 18P - 22-27 Nm (16-20 ft. lbs.)
 - 28P - 35-40 Nm (25-30 ft. lbs.)
 - 38P - 80-95 Nm (60-70 ft. lbs.)
- I. Confirm there are no leaks after powering the system.

70/70 Eco Series

High Pressure Filters
Max 450 l/min - 420 bar

When flexibility meets reducing environmental impact

A proven filter offering reduced space and piping

The 70/70 Eco Series features a range of head and bowl sizes and connection options. Microglass III glassfibre and Ecoglass III media is available. Maximum pressure 420 bar. Maximum flow 450 l/min. A proven, strong and robust filter for heavy duty applications.

Product Features:

- 70/70 Eco features a range of head and bowl sizes and connection options.
- Microglass III glassfibre and Ecoglass III media is available.
- Maximum pressure 420 bar. Maximum flow 450 l/min.
- A proven filter offering high levels of system protection.

70/70 Eco Series

High Pressure Filters

Features & Benefits

Features	Advantages	Benefits
Fatigue tested to full pressure rating	Strong and robust housing for heavy duty applications	Reliable and continuous operation both in mobile and industrial applications
Several head options and connection sizes	Easy mounting	Reduced space and piping Right filter for each application
Several bowl lengths	Optimised sizing	Efficient filtration
Microglass III replacement elements	Multi-layered design produced high capacity and efficiency	Great performance value
	Wire support reduces pleat bunching, keeps performance consistent	Reliable performance throughout element life Reduces downtime, maximises element life
Coreless Ecoglass III replacement elements	No metal content in element	Environmentally friendly disposal by incineration
	Reduced overall weight of 50%	Lower element replacement costs
	Easy compaction of used elements	Lower disposal costs
	Eco adaptors available	Retrofit coreless design to housings already installed
Visual, electrical and electronic indicators available	Check element condition at a glance	Optimise element life, prevent bypassing
	Right style for the application	Matches your system electrical connections

Typical Applications

- Forestry equipment
- Industrial power units
- Pulp and paper
- Port handling equipment
- Mining and quarrying equipment

The Parker Filtration 70/70 Eco Series High Pressure Filters.

High quality 420 bar in-line pressure filters designed to offer high levels of protection at flows up to 450 l/min.

Dirt sensitive systems can be protected with confidence using the 70 Series high pressure filters.

The 70 Series also available with environmentally friendly Ecoglass III elements.

Specification

Pressure ratings:

Maximum allowable operating pressure 420 bar (350 bar Length 4).
Filter housing pressure pulse fatigue tested: 10^6 pulses 0 - 414 bar.

Connections:

Threads G1, G1 $\frac{1}{4}$, G1 $\frac{1}{2}$ (ISO 228/1).
or flanges 1 $\frac{1}{4}$ " SAE 3000-M, 1 $\frac{1}{2}$ " SAE 3000-M, 1 $\frac{1}{4}$ " SAE 6000-M, 1 $\frac{1}{2}$ " SAE 6000-M.

Filter housing:

Head material cast iron (GSI).
Bowl material steel. Max torque 40 Nm.

Seal material:

Nitrile or Fluoroelastomer.

Operating temperature range:

Seal material Nitrile: -40 °C to +100 °C.
Seal material Fluoroelastomer: -20 °C to +120 °C.

Bypass valve:

Opening pressure 3.5 bar.

Filter element:

Degree of filtration:

Determined by Multipass-test according to ISO 16889.

Flow fatigue characteristics:

Filter media is supported so that the optimal fatigue life is achieved (ISO 3724).

Microglass III:

Supported with epoxy coated metal wire mesh, end cap material reinforced composite and metal inner core.
Collapse rating 20 bar (ISO 2941).

Ecoglass III:

Supported with plastic net, end cap material reinforced composite.
No metal parts.

Collapse rating 10 bar (ISO 2941).

Filter element can only be used together with reusable FEA Eco-adapter.

Note: Ecoglass III contributes to ISO 14001 quality.

High collapse elements:

(To be used when no bypass function in filter housing).

Microglass III media supported with epoxy coated metal wire mesh on upstream and stainless steel on downstream, end cap material steel. Strong metal inner core. Collapse rating 210 bar (ISO 2941).

Indicator options:

Indicating differential pressure: 2.5 ± 0.3 bar or 7.0 ± 0.5 bar.

2.5 bar indicators to be used with 3.5 bar bypass valve and 7.0 bar indicators with no bypass function.

- visual M3.
- electrical T1.
- electronic F1 (PNP).
- electronic F2 (NPN).

For indicator details see catalogue section 6.

Fluid compatibility:

Suitable for use with mineral and vegetable oils, and some synthetic oils. For other fluids, please consult Parker Filtration.

SAE Flange Dimensions					
Type	K	H	DL	DT	G
1.1/4 SAE 3000 psi	58,7	30,2	Ø 36	31,8	M10-15
1.1/2 SAE 3000 psi	69,9	35,7	G1.1/4	38,1	M12-18
1.1/4 SAE 6000 psi	66,7	31,7	Ø 30,3	31,8	M14-19
1.1/4 SAE 6000 psi	79,4	36,5	G1.1/4	38,1	M16-21

Spare Eco adaptors that are needed for use with or changing to Eco elements are as follows

Filter Type	Eco Adaptor	Part Number
70-1	FEA7005.B	911042090
70-2	FEA7006.B	911042087
70-3	FEA7007.B	911042091
70-4	FEA7008.B	911042092

Pressure Drop Curves

With 3.5 bar bypass the recommended initial pressure drop is max 1.2 bar.

If the medium used has a viscosity different from 30 cSt, pressure drop over the filter can be estimated as follows:

The total Δp = housing Δp_h + (element $\Delta p_e \times \text{working viscosity}/30$).

70 Series Empty Housing

- A: 70T with G16 connections
- B: 70T with G20 connections and 70L with G16 connections
- C: 70L with G20 connections and 70B
- D: 70T with G24 connections
- E: 70L with G24 connections

22PD/32PD Series

High Pressure Duplex Filters

Max 260 l/min - 210 bar

A duplex design with a wide application capability

Designed to offer continuous operation during element change

The 22PD/32PD Series utilizes a duplex design with integrated balancing valve and vent ports. Microglass III glassfibre media is standard. Maximum pressure 210 bar. Maximum flow 260 l/min. A changeover valve operates on the upstream side of the filter, ensuring a contamination free system.

Product Features:

- 22PD/32PD utilizes a duplex design with integrated balancing valve and vent ports.
- Microglass III glassfibre media is standard.
- Maximum pressure 210 bar. Maximum flow 260 l/min.
- Designed to offer continuous operation during element change.

22PD/32PD Series

High Pressure Duplex Filters

Features & Benefits

Features	Advantages	Benefits
Duplex design	Element service possible during operation	Allows to keep machine running with full contamination protection
Integrated balancing valve	No external piping required	Safety and reliability
Vent ports	Purges all trapped air in filter	Get the maximum performance from the elements Prevents a "flabby" system
Microglass III replacement elements	Multi-layered design produced high capacity and efficiency	Great performance value Reliable performance throughout element life
	Wire support reduces pleat bunching, keeps performance consistent	Reduces downtime, maximises element life
Visual, electrical and electronic indicators available	Check element condition at a glance	Optimises element life, prevents bypassing
	Right style for the application	Matches your system electrical connections

Typical Applications

- Ship steering systems
- Continuous operation industrial systems
- High flow flushing systems

The Parker Filtration 22PD/32PD Series High Pressure Duplex Filters.

Specially designed to offer continuous operation, even during element change.

A changeover valve operates on the upstream side of the filter, ensuring a contamination free system.

Specification

Pressure ratings:

Maximum allowable operating pressure 210 bar.
Filter housing pressure pulse fatigue tested: 10⁶ cycles 210 bar.

Connections:

Inlet and outlet connections are threaded.

Connection style	Model	
BSPF(G)	22PD	32PD
Flange SAE 3000-M	1" 1/4"	1 1/2"

*3000-M is a SAE style with appropriate metric fixing threads.

Filter housing:

Head material cast iron (GSI).
Bowl material steel.

Seal material:

Nitrile or Fluoroelastomer.

Operating temperature range:

Seal material Nitrile: -40 °C to +100 °C.
Seal material Fluoroelastomer: -20 °C to +120 °C.

Bypass valve:

Opening pressure 3.5 bar

Filter element:

Degree of filtration:

Determined by multipass-test according to ISO 16889.

Flow fatigue characteristics:

Filter media is supported so that the optimal fatigue life is achieved (ISO 3724).

Microglass III:

Supported with epoxy coated metal wire mesh, end cap material reinforced composite and metal inner core. Collapse rating 20 bar (ISO 2941).

High collapse elements:

(to be used when no bypass function in filter housing).
Microglass III media supported with epoxy coated metal wire mesh on upstream and stainless steel on downstream, end cap material steel. Strong metal inner core. Collapse rating 210 bar (ISO 2941).

Indicator options:

Indicating differential pressure: 2.5 ± 0.3 bar.

- visual M3.
- electrical T1.
- electronic F1 (PNP).
- electronic F2 (NPN).

For indicator details see catalogue section 6.

Weights (kg):

Model	Length 1	Length 2
22PD	22	27
32PD	44	50

Fluid compatibility:

Suitable for use with mineral and vegetable oils, and some synthetic oils. For other fluids, please consult Parker Filtration.

22PD/32PD Series

High Pressure Duplex Filters

Pressure Drop Curves

The recommended level of initial pressure drop is max. 1.2 bar.

If the medium used has a viscosity different from 30 cSt, pressure drop over the filter can be estimated as follows:

$$\Delta p = (\Delta p_{30} \times \text{viscosity of medium used}) / 30 \text{ cSt.}$$

The total Δp = housing Δp_h + (element $\Delta p_e \times \text{working viscosity}/30$).

Indicators Series

FMU Δp -Indicators and Pressure Indicators
Max 420 bar

Measuring critical system parameters is essential

Reliable and continuous control of the filter in all applications

The FMU range of filter condition indicators are designed for use on a wide range of Parker filters and competitive interchange filters. Maximum pressure 420 bar. A comprehensive range of high quality indicators for mobile, industrial and marine applications.

Product Features:

- The FMU range of filter condition indicators, designed for use on a wide range of Parker filters.
- Accurate visual, electronic or electrical filter condition feedback.
- Maximum pressure 420 bar.
- Mobile, industrial and marine applications.

Indicators Series

FMU Δp -Indicators and Pressure Indicators

Features & Benefits

Features	Advantages	Benefits
Indicators fatigue tested to full pressure rating	Reliable indicators for heavy duty applications	Reliable and continuous control of the filter in all applications
Cartridge screw-in type indicators	Easy mounting	Reliable sealing, no leakage
Visual, electrical and electronic indicators available	Check element condition at a glance	Optimises element life, prevents bypassing
	Right style for the application	Match your system's electrical connections
Several indication settings	Optimized for each bypass setting	Right indicator for application
Visual indicators	Local monitoring of the element condition	Reliable low cost indicator
Electrical indicator with change-over switch	Option of Normally Open (N.O.) and Normally Closed (N.C.) function	Approved for low voltage and high voltage use including machine control systems and PLC's
Electrical indicator with 4 LEDs	Thermal lock-out	No false alarm because of low temperature oil
	Visual early warning with yellow LED	Allows time to schedule element change
	Pre-alarm with yellow LED and wired output	Indicates upcoming element change
	Alarm with red LED and wired output	Clear indication for element change
Programmable and ATEX certified indicators available	Right indicators for special applications	Improved machine surveillance

Typical Applications

- Industrial equipment
- Mobile equipment
- Marine/offshore applications

The Parker FMU Series Differential Pressure Indicators

The FMU range of filter condition indicators, are designed for use on a wide range of Parker filters and suitable for competitive interchange (consult Parker Filtration for details).

Ideal for giving accurate visual, electronic or electrical feedback of filter element condition, in order to facilitate effective maintenance and ensuring hydraulic systems, marine/mobile or industrial are protected from particulate contamination.

Specification

Maximum operating pressure:

420 bar (250 bar for aluminium).

Maximum differential pressure:

210 bar.

Working temperature range:

-20°C to +85°C with fluoroelastomer seals, -40°C to +85°C with nitrile and EPDM seals.

Material of housing:

Brass, aluminium or stainless steel.

Seals:

Fluoroelastomer, Nitrile or EPDM.

Mounting torque:

max. 75 Nm

(max. 50 Nm for aluminium indicator body & filter housing)

The differential pressure values of standard indicator models:

1.2 bar ± 0.2

1.5 bar ± 0.2

2.5 bar ± 0.3

5.0 bar ± 0.5

7.0 bar ± 0.5

8.5 bar ± 0.5

(Indicators for other differential pressure values are optional).

FMU Δp – Indicators are typically used with the following filters:

Heavy duty filters: GS, SF1040, DF2035, DF2050, DFH2060, DF2070, DF2089, DF2110 Note: FMU-Block is required to connect indicator to filter.	U12H	1.0 and 1.5 bar
Medium pressure filters series: 45M. High pressure filters series: 70L, 70T, 70B, 5000, 7100 and 7200. Heavy duty filter series: 130M, DF2145.	U12H	2.5 bar
High pressure filters without bypass valve: 70L, 70T, 70B, 7100 and 7200.	U12H	7.0 bar
Medium and low pressure filter series; Note for PD Range only 2.5 bar indicators are available: 15CN, 40CN, 80CN, 22PD, 32PD, 15P, 30P, 40RF, 50RF, IL8, 12M, 22M, 16P, 26P, 36P. Also heavy duty filter DF40.	U14M	1.2 and 2.5 bar
High pressure filters 18P, 28P, 38P, FDA, FDB	U14H	2.5 and 5.0 bar

*Indication output	max. 300 mA/36 Vdc
Output type:	N.O. or N.C./NPN or PNP

Note: Do not connect output terminals 1 or 2 directly (without load) to power supply terminals, because this will damage the equipment.

Safety feature: The 250 bar U14M indicator does not fit into the U14H cavity, which is used in 420 bar filters

FMUL1 Programmable

Dimensions: see FMUF electronic Δp-indicator

Programmable Δp-indicator

All settings adjustable (settings made via PC) Connections cable and software available from Parker

- 4 LEDs giving visual indication:
 - Green (G): Power ON
 - Yellow 1 (Y1): Pre-alarm 1 (presetting 50%)
 - Yellow 2 (Y2): Pre-alarm 2 (presetting 75%)
 - Red (R): Indication (presetting 100%)
- two independently programmable indication outputs
 - can be set independently from each other and LED setting
 - output type: NPN or PNP
 - switching type: N.O. or N.C.
- setting range: 0,5 ... 10 bar
- thermal lock-out range: 0 ... 100°C
- includes a microchip with memory logs
 - number of alarms: max 65535
 - time indication on (output 1): max 1092 hours
 - time power on (running hours): max 7 1/2 years
 - upload and reset via PC

FMUX ATEX Approved Electronic

Specification:

- Equipment category 2 (for zone 1): Ex II 2 GD Eex m II T6
- Max temperature 85°C
- Supply Voltage: 10 – 36 Vdc
- Current 300 mA (max)
- I_{kmax}: 1A
- Halogenfree cable

FMUX Indicator Information (see left)

Indicator type X1: ATEX Δp-indicator

Electronic indicator accordant with ATEX 94/9/EC directive: (Ex) II 2 GD Eex m II T6.

Degree of protection IP66. X1 refers to PNP, N.O.

Other output options X2, X3 and X4 are available by request.

(Refer to electronic F Type).

L1 Indicator Information (see previous page)

Connection cable + software for programmable indicator L1

Connection cable for PC serial connection and software for indicator settings and utilising memory logs.

GS Series

Medium Pressure Filters
Max. 350 l/min. - 40 bar

In-line peace of mind

Three different housing sizes and several media options allow a wide range of applications. Cast iron housings are operable up to 40 bars. Pre-filtration with magnets is available as well as several connection options.

Typical application examples. At the top of each product section, a 'typical application' photo example has been included.

Applications:

- Industrial gear boxes
- Heavy fuel oil filter for diesel engines
- Suction filter for fuel systems
- Medium pressure hydraulic filter

Providing heavy duty filtration solutions

Parker can provide correct filtration solutions for a multitude of fuel, gas, hydraulic oil and lubrication systems. A wide selection of low and medium pressure multi-purpose filters that offer several different filter elements – environmentally sound choices too – allowing highly customized solutions. Duplex filters and the ability to bank multiple filters together enables continuous filtration during element changes. Parker's heavy duty solutions for clean fluids and peace of mind.

Specification

Assembly:

In-line filter

Maximum operating pressure:

40 bar. For DN80 flanges 16 bar.

Nominal flow rate (30cSt):

350 l/min (21 m³/h)

Connections:

Threads G1 for GSN3 and G1½ for GS6 and GS7. GS7 is available also with flanges DN80/PN16.

Seal material:

Fluoroelastomer or optionally nitrile

Operating temperature:

-40°C...+100°C with Nitrile seals, -20°C...+120°C with Fluoroelastomer seals, -20°C...+160°C with metal mesh elements and Fluoroelastomer seals.

Housing material:

Cast iron

Weight:

See dimensions table

Magnet pack:

Available as option

Bypass valve:

Standard opening pressure 1.6 bar, optionally with blocked bypass

Indicator options:

Visual, electrical or electronic indicator requires an indicator block. For details see indicator options table on product description page and catalogue section 4.

Filtration materials:

- Glassfibre Microglass III
- Cleanable metal mesh

Fluid compatibility:

Suitable for use with regular hydraulic and lubrication oils and fuel oils. For other fluids consult Parker Filtration.

GS Series

Pressure Drop Curves

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

The recommended level of the initial pressure drop for this filter is maximum 0.5 bar.

Δp -curves are measured at 30 cSt.

If the medium used has a viscosity different from 30 cSt, pressure drop over the element can be estimated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}} \times \frac{\text{working viscosity}}{30 \text{ cSt}}$$

GA Series

Medium Pressure Filters

Max. 230 l/min. 30 bar

Contamination-proof and customizable filter solution

Designed for various applications. In-out filter principle means there is no possibility for contaminated leak back into the system. Supplied with magnetic pre-filtration. Customizable for filter coolants thus ideal for metal cutting equipment. Visual or electronic differential pressure indicators and environmentally friendly filtration elements available.

- Bypass filtration
- Stone crushers
- Lube oil systems
- Metal cutting equipment

Specification

Assembly:

In-line filter

Maximum operating pressure:

30 bar

Nominal flow rate (30 cSt):

230 l/min (13.8 m³/h)

Connections:

Threaded BSP ports. SAE ports available by request.

Seal material:

Nitrile, optionally Fluoroelastomer or Neoprene

Operating temperature:

-40°C...+100°C with Nitrile seals, -20°C...+120°C with Fluoroelastomer seals. For other temperatures consult Parker Filtration.

Housing material:

Aluminium

Weight:

See dimensions table

Bypass setting:

Opening pressure standard 1.5 bar, optionally 0.8 bar, 2.0 bar or blocked bypass

Filtration materials:

- Ecoglass for *LEIF*® element with reusable metal element sleeve. *LEIF*® contributes to ISO14001.
- Glassfibre Microglass III
- Resin impregnated cellulose paper 10 µm nominal
- Cleanable metal mesh

Magnetic pack:

Standard

Differential pressure indicators:

Visual or Visual-electrical indicator

Setting 1.2 bar (for 2.0 bar and 1.5 bar bypass) or 0.7 bar (for 0.8 bar bypass)

Fluid compatibility:

Suitable for use with regular hydraulic and lubrication oils. For other fluids consult Parker Filtration.

BGAH Series

Medium Pressure Filters

Max. 500 l/min. 25 bar

In-line solution for a straight pipeline

Pre-filtration by magnet column and a full-flow bypass with low hysteresis. Contamination-proof in-out filter principle. In- and outlet configuration allows integration in a straight pipeline. Nominal flow rate up to 500 l/min. Highly customizable for different applications.

10 bar

Nominal flow rate (30 cSt):

2000 l/min (120 m³/h)

Connections:

Flanges SAE 3" 3000-M

Seal material:

Nitrile, optionally Fluoroelastomer

Operating temperature:

-40°C...+100°C with Nitrile seals, -20°C...+120°C with Fluoroelastomer seals. For other temperatures consult Parker Filtration.

Housing material:

Upper housing aluminium, lower housing steel

Weight:

BGLS 4-1000: 56 kg

BGLS 4-1500: 65 kg

BGLS 4-2000: 75 kg

Bypass setting:

Opening pressure standard 1.5 bar, optionally 0.8 bar, 2.0 bar or blocked bypass

Filtration materials:

- Ecoglass for *LEIF*[®] element with reusable metal element sleeve. *LEIF*[®] contributes to ISO14001.
- Glassfibre Microglass III
- Resin impregnated cellulose paper 10µm nominal
- Cleanable metal mesh

Magnetic pack:

Standard

Differential pressure indicators:

Visual or Visual-electrical indicator, see page 200. (In ordering code, replace 155 with 178).

Setting 1.2 bar (for 2.0 bar and 1.5 bar bypass) or 0.7 bar (for 0.8 bar bypass).

Fluid compatibility:

Suitable for use with regular hydraulic and lubrication oils. For other fluids consult Parker Filtration.

Indicator details, see page 16.

Type	H	L	F

2000	1520	1180	1280

BGLS Series

Pressure Drop Curves

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

The recommended level of the initial pressure drop for this filter is maximum 0.5 bar.

Δp -curves are measured at 30 cSt.

If the medium used has a viscosity different from 30 cSt, pressure drop over the element can be estimated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}} \times \frac{\text{working viscosity}}{30 \text{ cSt}}$$

SF1040 Series

Low Pressure Filters
Max. 1400 l/min. 10 bar

Multi-purpose filter for gas and high flow fluid systems

Strong welded steel construction housing features DN80 or DN100 connections. Several media options including PED 3 classified versions for gas applications. As options available safety filter to secure filtration even in by pass situations, and differential pressure indicator for accurate operation control.

Contact Information:

(from AT, BE, CH, CZ, DE, EE, ES,
FI, FR, IE, IT, PT, SE, SK, UK)
filtrationinfo@parker.com

www.parker.com/hfde

Applications:

- Lubricating oil filter for industrial systems
- Gas fine filter for combustion engines
- Fuel oil filter for high flow systems
- Large in line low-pressure filter for hydraulic systems

Specification

Assembly:

In-line filter, vertical installation or optionally horizontal installation. Includes 2 elements.

Maximum operating pressure:

10 bar

Nominal flow rate (30 cSt):

1400 l/min (84 m³/h)

Connections:

Flanges DN80/PN16 or DN100/PN16

Seal material:

Fluoroelastomer

Operating temperature:

-20°C...+120°C, with Fluoroelastomer seals,

-20°C...+160°C with metal mesh elements and Fluoroelastomer seals.

Housing material:

Steel or stainless steel

Weight:

100 kg

Bypass valve:

Standard without bypass. Optionally opening pressure 2.0 bar.

Filtration materials:

- Glassfibre Microglass III
- Resin impregnated cellulose paper 15 µm nominal
- Cleanable metal mesh

Indicator options:

Visual, electrical or electronic indicator requires an indicator block. For details see indicator options table in product description page and catalogue section 4.

Fluid compatibility:

Suitable for use with regular hydraulic and lubrication oils and fuel oils. For heavy fuel oil applications, please specify option P2 (see table 8 in product description) which ensures that filters are delivered with documentation according PED 97/23/EC category II. Respectively for combustible gas applications, specify option P3 for PED category III. For other fluids consult Parker Filtration.

Eco130 Series

Medium Pressure Filters
Max. 1400 l/min. 30 bar

Modular system for industrial applications

High flow return filters for industrial use on hydraulic or lubrication systems. High flow and pressure up to 30 bar in single units. Ability to bank multiple filters together enables continuous filtration during element changes. Coreless Ecoglass III elements.

Contact Information:

Applications:

- Paper production plants
- Steel mills
- Aluminium mills
- Industrial power packs
- Lubrication systems
- Power generation

Specification

Assembly:

In-line filter as a single filter, a dual unit, a parallel unit or a filter system with L-bore selecting valve assembly (only one side in use). Vertical installation.

Maximum operating pressure:

Single filter: 30 bar

Dual and parallel units and filter systems: 16 bar

Nominal flow rate (30 cSt):

Single filter: 1000 l/min (60 m³/h)

Dual and parallel units and filter systems: 1400 l/min (84 m³/h)

Connections:

Single filter: Flanges SAE 2" 3000-M, SAE 2½" 3000-M or with adaptor threads G1½ or G2.

Dual units: Flanges SAE 3" 3000-M or with adaptor threads G2.

Parallel units and filter systems: DN80/PN16 or DN100/PN16.

Seal material:

Nitrile or optionally fluoroelastomer

Operating temperature:

-40°C...+100°C with Nitrile seals, -20°C...+120°C with Fluoroelastomer seals. For other temperatures consult Parker Filtration.

Housing material:

Aluminium

Weight:

See a table in dimension drawing

Bypass valve:

Opening pressure 3.5 bar

Filtration materials:

- Glassfibre Microglass III
- Environmentally friendly Ecoglass III. No metal parts.
- Cleanable metal mesh

Indicator options:

For details see indicator options table on product description page and catalogue section 4.

Differential pressure indicators:

Visual indicator always included to each column, setting 2.5 bar. Optional electrical or electronic indicators to be mounted on lower indicator port.

Fluid compatibility:

Suitable for use with regular hydraulic and lubrication oils. For other fluids consult Parker Filtration.

918045062	NITRILE SEAL KIT 130S VALVE

HFS and HFD Series

High Flow Single and Duplex Filters
Max. 11200 l/min. 10 bar

Heavy Duty Reliability

New High Flow Single and Duplex Filters ensure reliability in industrial, marine, and power generation applications up to DN350 and flow rates up to 11200 l/min. One filter element size allows standardisation in multi-element housings. Equalising valve eases changeover of flow direction in filter housings. Parker's angular sealing arrangement aids installation of elements.

Contact Information:

Parker Hannifin
Hydraulic Filter Division Europe

European Product Information Centre
Freephone: 00800 27 27 5374
(from AT, BE, CH, CZ, DE, EE, ES, FI, FR, IE, IT, PT, SE, SK, UK)
filtrationinfo@parker.com

www.parker.com/hfde

Applications:

- Steel industry, paper mills, marine applications and power generation
- Lubricating systems
- Fuel filtration
- Coolant filtration

Specifications:**Assembly:**

In-line filter as a single filter or a duplex filter. Single filters are available with connections on the same side or on opposite sides. Duplex filters are available either with a L-bore ball valve in upstream and downstream lines or with two butterfly valves in the upstream line and two flap-type check valves in the downstream line.

Maximum operating pressure:

10 bar

Nominal flow rate (30 cSt):

Up to 11200 l/min (672 m³/h).

Connections:

Flanges: DN50 – DN350 / PN10
ANSI flanges upon request.

Seal material:

Nitrile
Other seal materials upon request.

Operating temperature:

0°C...+100°C

Housing material:

Steel
Stainless steel upon request.

Weight:

See a table on page 241.

Bypass valve:

Opening pressure 3,5 bar or without a bypass.

Filter elements:

Environmentally friendly Ecoglass III.
Resin impregnated heavy duty cellulose paper
15 µm nominal.
Cleanable wire mesh.

Differential pressure indicators:

Filter can be equipped with a visual, electrical or electronic indicator with setting 2,5 bar.

Fluid compatibility:

Suitable for use with regular hydraulic and lubrication oils. For suitability with other fluids consult Parker Filtration.

Filter vessels with multiple standardized elements. Bypass valves are fixed on the center tube inside the housing.

Optional safety cover prevents opening of a pressurized housing. Vent line comes with a ball valve.

In large connection sizes the change-over is made with a hand wheel that operates two butterfly valves. Either valve is always open to ensure flow to the system.

HFS and HFD Series

Pressure Drop Curves

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

The recommended level of the initial pressure drop for the filter is maximum 0.8 bar.

Δp -curves are measured at 30 cSt.

If the medium used has a viscosity different from 30 cSt, pressure drop over the filter can be estimated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}} \times \frac{\text{working viscosity}}{30 \text{ cSt}}$$

FMB

Modular Filter Manifold Block

Modular manifold – ease of installation and capacity increase

Parker FMB – filter manifold block with integrated system pressure and temperature control boasts easy to install modular design. It makes exceptionally easy to increase capacity just by adding more blocks.

Intergrated block design minimizes the risk of leakages and saves installation time. Extra benefit of compact design is low pressure drop.

Features:

- Light weight aluminium design
- Easy to connect secondary pump – integrated non return valves
- Optional offline polishing filter

Applications:

- Wind turbine gearboxes
- Industrial gearboxes
- Industrial lube systems

Specification

Maximum operating pressure:..... 30 bar

Operating temperature:..... -20°C....+100°C

Survival temperature: -40°C....+100°C

Housing material: aluminum

Weight:

-1 filter block 80 kgs

-2 filter block 110 kgs

-extension block 50 kgs

Seal material: Nitrile

System pressure relief valve: Opening pressure 10, 15 or 20 bar

Thermal valve: Opening temperature 40°C, 45°C or 55°C

Bypass valve: 5 or 7 bar

Indicator options: Visual, electrical or electronic switch type indicator

Filtration material:

- main element..... Glassfibre Microglass III

- by pass element Metal mesh

Fluid compatibility: Suitable for use with regular hydraulic and lubricating oils.
For other fluids consult Parker Filtration

DF2145

Duplex Filters

Max. 80 l/min. 30 bar

Duplex safety for fuel, lube and hydraulic systems

Duplex operation for security and continuous flow. Several filtration media options include environmentally friendly Ecoglass III elements and allows wide selection of applications. Integrated differential pressure switch connection with shut off valve. Sturdy cast iron housing with pressure rating up to 30 bar. Block mounting available.

Contact Information:

Parker Hannifin

filtrationinfo@parker.com

www.parker.com/hfde

Applications:

- Diesel engine fuel systems
- Industrial lube oil systems
- Industrial medium pressure hydraulic systems

Specification

Duplex filter:

Change-over valve with open center position. Handle locking device for both end positions. Vent valves with secured outlets on both sides. Integrated indicator port with test connections.

Maximum operating pressure:

30 bar

Connections:

Two sets of threads G^{3/4} or M26 x 1.5. Connections on flange are plugged with steel plug.

Seal material:

Fluoroelastomer

Operating temperature:

-20°C...+120°C with Fluoroelastomer seals,
-20°C...+160°C with metal mesh elements and Fluoroelastomer seals.

Housing material:

Cast iron (GJS)

Weight:

15 kg

Nominal flow rate (30 cSt):

80 l/min (4,8 m³/h)

Bypass valve:

Standard without bypass, optional opening pressure 3.5 bar

Filtration materials:

- Glassfibre Microglass III
- Environmentally friendly Ecoglass III. No metal parts. Ecoglass III contributes to ISO14001.
- Cleanable metall mesh
- Resin impregnated fine cellulose paper 10 µm nominal

Differential pressure indicators:

Integrated indicator port. Filter can be equipped with visual, electrical or electronic differential pressure indicator. Setting 2.5 bar, other settings available. For details see indicator options table on product description page and catalogue section 4.

Fluid compatibility:

Suitable for use with regular hydraulic and lubrication oils & light fuel oils (diesel). For heavy fuel oil applications, please specify option P2 (see table 8 in product description) which ensures that filters are delivered with documentation according PED 97/23/EC category II. For other fluids consult Parker Filtration.

DF2145

Pressure Drop Curves

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

The recommended level of the initial pressure drop for this filter is maximum 1.0 bar.

Δp -curves are measured at 30 cSt.

If the medium used has a viscosity different from 30 cSt, pressure drop over the element can be estimated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}} \times \frac{\text{working viscosity}}{30 \text{ cSt}}$$

DFBO Series

Duplex Fuel Filters
Max. 90 l/min. 10 bar

Continuous diesel filtration in Marine applications with DFBO duplex filter:

The new DFBO duplex filter brings Racor® FBO filters to engine room environment. The new duplex design ensures that fuel is efficiently filtered all the time. The cast iron head and steel bowls mean that it can be used in Marine applications.

The DFBO comes with two bowl lengths allowing diesel flows up to 90 l/min. Depending on the elements inside the unit can be used as a prefilter, a water separator/particle filter or a water absorptive filter. Easy service, no special tools are required.

Contact Information:

www.parker.com/hfde

Applications:

- Fuel systems on diesel engines
- Marine fuel docks
- Diesel fuel dispensing system

Specification

Duplex filter:

Change-over valve with open center position. Locking device for both end positions and center position. Manual vent valves and drain valves.

Maximum operating pressure:

10 bar (Marine assemblies 7 bar)

Connections:

Threaded ports M30 x 1,5 or optionally G1" facing downwards.

Seal material:

Fluoroelastomer

Operating temperature:

0°C...+80°C (Marine assemblies 0°C...+60°C), for other temperatures consult Parker Filtration.

Housing material:

Head material cast iron, bowl material steel.

Weight:

40 kg

Nominal flow rate (3 cSt):

DFBO-10: 70 l/min (4.2 m³/h)

DFBO-14: 90 l/min (5.4 m³/h)

Bypass valve:

No bypass

Filter elements:

Filter separator elements with micron ratings 10 µm and 25 µm remove water and contaminants from fuel streams. Other types of FBO elements and other ratings are available, see replacement element table on the following page.

Fluid compatibility:

Suitable for use with diesel fuel, jet fuel, gasoline, kerosene, JP4, JP5 and JP8.

DF40

Duplex Filters

Max. 200 l/min. 40 bar

Cast iron duplex filter for Marine applications:

The new DF40 duplex filter gives you extra flexibility in installation because it can be serviced from the top or the bottom. The durable cast iron housing makes it an especially good fit for engine room applications.

The DF40 with flow up to 200 l/min and pressure up to 40 bar contains Eco elements which help to save the environment and reduce the customer's disposal costs as no metal parts are included. This filter also disposes of a double indicator port and test connections which can be isolated with shut-off valves for possible assembly and maintenance.

Contact Information:

Parker Hannifin
Hydraulic Filter Division Europe

**European Product
Information Centre**
Freephone: 00800 27 27 5374
(from AT, BE, CH, CZ, DE, EE, ES,

filtrationinfo@parker.com

www.parker.com/hfde

Applications:

- Fuel filter for diesel engines up to 10 MW
- Lubrication filter for gearboxes and propulsion systems
- Medium pressure duplex filter in hydraulic systems
- In-line return duplex filter in hydraulic systems

Specification

Duplex filter:

Change-over valve with open center position. Locking device for both end positions. Element change is possible by opening either the top cover or the bowl in the bottom. Safety guards ensure that pressure is released prior opening the filter.

Maximum operating pressure:

40 bar

Connections:

Flanges SAE 1½" 3000-M as standard. Optional thread connections G1½ and G1¼ available with flange adapters.

Seal material:

Fluoroelastomer

Operating temperature:

-20°C...+120°C with Fluoroelastomer seals,
-20°C...+160°C with metal mesh elements and Fluoroelastomer seals.

Housing material:

Cast iron (GJS)

Weight:

52 kg

Nominal flow rate (30 cSt):

200 l/min (12 m³/h)

Bypass valve:

Standard without bypass, optional opening pressure 3.5 bar

Indicators:

Integrated indicator port. Filter can be equipped with visual, electrical or electronic differential pressure indicator. Setting 2.5 bar, other settings available. Additional indicator port and isolation valves which also enable indicator testing are available by request. For details see indicator options table on product description page and catalogue section 4.

Filter elements:

- Environmentally friendly Ecoglass III elements, micron ratings(abs): 2 µm, 5 µm, 10 µm and 20 µm. Ecoglass III elements contribute to ISO14001 because they do not include metal parts.
- Glassfibre Microglass III elements, micron ratings(abs): 2 µm, 5 µm, 10 µm and 20 µm.
- Cleanable metal mesh elements, micron ratings(abs): 35 µm and 60 µm

Fluid compatibility:

Suitable for use with regular hydraulic and lubrication oils & light fuel oils. For heavy fuel oils and other fluids consult Parker Filtration.

DF40

Pressure Drop Curves

DF2089

Duplex Filters

Max. 350 l/min. 30 bar

Heavy duty duplex operation

Cast iron housing with pressure rating up to 40 bar features in-to out flow to keep the particles away even during the filter change. Differential pressure switch mounted on the filter for easy access. Several media options allow lube, fuel and hydraulic use – pre-filtration with magnets as option.

Contact Information:

(from AT, BE, CH, CZ, DE, EE, ES,
FI, FR, IE, IT, PT, SE, SK, UK)
filtrationinfo@parker.com

www.parker.com/hfde

Applications:

- Propulsion system lube oil filter
- Heavy fuel oil safety filter
- Medium pressure hydraulic systems

Specification

Duplex filter:

One reservoir can be closed for service, vertical installation.

Connections:

Square flanges with port size 60 mm. Standard delivery includes blind counter flanges. Optionally available with SAE 2" -3000M flange adapters.

Maximum operating pressure:

30 bar

Seal material:

Fluoroelastomer

Operating temperature:

-20°C...+120°C with Fluoroelastomer seals,
-20°C...+160°C with metal mesh elements and Fluoroelastomer seals.

Housing material:

Cast iron (GJS)

Weight:

65 kg

Nominal flow rate (30 cSt):

350 l/min (21 m³/h)

Bypass valve:

Standard bypass opening pressure 2.0 bar, optional opening pressure 1.6 bar or blocked bypass

Indicator options:

Visual, electrical or electronic indicator requires an indicator block. For details see indicator options table in product description page and catalogue section 4.

Filtration materials:

- Glassfibre Microglass III
- Cleanable metal mesh

Fluid compatibility:

Suitable for use with regular hydraulic and lubrication oils and fuel oils. Filters are delivered with documentation according PED 97/23/EC category II (required for heavy fuel oils). For other fluids consult Parker Filtration.

With X60 flange	232
With R32 adapter	245

DF2089

Pressure Drop Curves

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

The recommended level of the initial pressure drop for this filter is maximum 0.5 bar.

Δp -curves are measured at 30 cSt.

If the medium used has a viscosity different from 30 cSt, pressure drop over the element can be estimated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}} \times \frac{\text{working viscosity}}{30 \text{ cSt}}$$

DF60

Duplex Filters

Max. 350 l/min. 30 bar

Heavy duty lubrication

This heavy duty lubrication filter offers maximum performance especially in those applications using high viscosity lubricating oil. Filtration area has been enlarged to minimize element pressure drop. A perfect choice for a gearbox lubrication system where duplex filter is needed for continuous operation.

WARNING – USER RESPONSIBILITY

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

- This document and other information from Parker-Hannifin Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise.
- The user, through its own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalogue and in any other materials provided from Parker or its subsidiaries or authorized distributors.
- To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems.

DF65

Duplex Filters

Max. 800 l/min. 25 bar

Efficient Duplex filter for limited spaces.

The DF65 duplex filter has been designed especially for applications where space is limited. The unique design allows the installation of the filter in almost any position. For very tight height limitations, horizontal mounting position will save on critical available space. New purpose-designed iprotect® elements contain a broad filtration area providing low pressure loss, long service life and maximum protection even in cold conditions. The duplex arrangement allows continuous operation and element service to be made when most suitable for the maintenance staff.

filtrationinfo@parker.com

www.parker.com/hfde

Applications:

- Gearbox lubrication systems
- Turbine lubrication systems
- Propulsion systems

Specification

Duplex filter:

Change-over valve with an open centre position. A locking device for both end positions and the middle position. Safety guards ensure that pressure is released prior to opening the filter.

Flow direction:

From out to in.

Connections:

Flanges SAE 2" 3000-M or SAE 2½" 3000-M. Inlet and outlet pressure connections 3/8" for an external differential pressure transmitter.

Maximum operating pressure:

25 bar

Seal material:

Fluoroelastomer

Operating temperature:

-20 ... +120°C

-20... + 160°C when using metal mesh elements

Housing material:

Cast iron (GSI)

Weight:

135 kg

Nominal flow rate (30 cSt):

800 l/min (48 m³/h)

Bypass valve:

Standard bypass opening pressure 3.5 bar, optional opening pressure 1.7 bar or a blocked bypass.

Indicator options:

Integrated indicator port. Filter can be equipped with a visual, an electrical or an electronic differential pressure indicator. Standard indicator setting 2.5 bar used with 3.5 bar and blocked bypass; and setting 1.2 bar with 1.7 bar bypass.

Filter elements:

- iprotect® glassfibre elements, micron ratings(abs): 2 µm, 5 µm, 10 µm and 20 µm
- iprotect® cleanable metal mesh elements, micron ratings(abs): 35 µm and 60 µm

Fluid compatibility:

Suitable for use with regular hydraulic and lubrication oils and light fuel oils. For heavy fuel oils and other fluids consult Parker Filtration.

Parker's iprotect® family of filter elements represent the next generation of patented filter elements.

iprotect®

- Thanks to the patented construction of every iprotect element, the quality of filtration is guaranteed, as no 'pirate spare parts' can be used. This ensures that the iprotect element remains the truly protective 'DNA' of hydraulic & lubrication systems.
- In addition to the ultimate protection of the system, the iprotect family ensures that any environmental impact is minimised, by the retention and reuse of the filter element support core.
- Finally, 'iprotect' the environment by reducing environmental waste, typically, by 50%.

Dimensions and other details may be changed without notice. Please contact Parker for the latest information.

DF65

Pressure Drop Curves

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

The recommended level of the initial pressure drop for this filter is maximum 0.8 bar.

Δp -curves are measured at 30 cSt.

If the medium used has a viscosity different from 30 cSt, pressure drop over the filter can be estimated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}} \times \frac{\text{working viscosity}}{30 \text{ cSt}}$$

DF2110 Series

Duplex Filters

Max. 1200 l/min. 30 bar

Heavy duty performance

High dirt holding capacity yet low pressure drop. Heavy duty cast iron housing and several media options means a multitude of suitable applications. Maximum flow rate up to 1200 l/min and extended housing available for high viscosity oils and longer service intervals. DN80 PN 25 connection.

Applications:

- Marine gear lubricating systems
- Propulsion systems
- Diesel engine lubricating systems
- Heavy fuel oil safety filter

Specification

Duplex filter:

One reservoir can be closed for service, vertical installation.

Connections:

Standard flange size DN80/PN25. Delivered without counter flanges.

Maximum operating pressure:

30 bar

Seal material:

Fluoroelastomer

Operating temperature:

-20°C...+120°C with Fluoroelastomer seals,

-20°C...+160°C with metal mesh elements and Fluoroelastomer seals.

Housing material:

Cast iron (GJS)

Weight:

Length 1: 200 kg

Length 2: 240 kg

Nominal flow rate (30 cSt):

Length 1: 1000 l/min (60 m³/h)

Length 2: 1200 l/min (72 m³/h)

Bypass valve:

Standard bypass opening pressure 2.0 bar, optional opening pressure 3.0 bar or blocked bypass

Indicator options:

Visual, electrical or electronic indicator requires an indicator block. For details see indicator options table in product description page and catalogue section 4.

Filtration materials:

- Glassfibre Microglass III
- Cleanable metal mesh

Fluid compatibility:

Suitable for use with regular hydraulic and lubrication oils and fuel oils. For heavy fuel oil applications, please specify option P2 (see table 8 in product description) which ensures that filters are delivered with documentation according PED 97/23/EC category II. For other fluids consult Parker Filtration.

Applications:

- Marine gear lubricating systems
- Propulsion systems
- Diesel engine lubricating systems
- Heavy fuel oil safety filter

Specification

Duplex filter:

One reservoir can be closed for service, vertical installation. Length 2 includes 2 elements/side and length 3 includes 3 elements/side.

Connections:

Standard flange size DN80/PN25. Delivered without counter flanges.

Maximum operating pressure:

30 bar

Seal material:

Fluoroelastomer

Operating temperature:

-20°C...+100°C with elements with Nitrile seals,
-20°C...+160°C with metal mesh elements and
Fluoroelastomer seals.

Housing material:

Cast iron (GJS)

Weight:

Length 2: 200 kg

Length 3: 240 kg

Nominal flow rate (30 cSt):

Length 2: 900 l/min (54 m³/h)

Length 3: 1000 l/min (60 m³/h)

Bypass valve:

Standard with blocked bypass. Optional opening pressure 1.7 bar

Indicator options:

Visual, electrical or electronic indicator requires an indicator block. For details see indicator options table in product description page and catalogue section 4.

Filtration materials:

- Resin impregnated heavy duty cellulose paper 15µm nominal
- Glassfibre Microglass III
- Cleanable metal mesh

Secondary filter:

- Filtration material cleanable wire mesh
- Filtration degree 60 µm

Fluid compatibility:

Suitable for use with regular hydraulic and lubrication oils and fuel oils. For heavy fuel oil applications, please specify option P2 (see table 8 in product description) which ensures that filters are delivered with documentation according PED 97/23/EC category II. DF2035 Series

Duplex Filters

Max. 600 l/min. 8 bar

Light weight, high capacity

Several media options and high dirt holding capacity – up to three filter elements per reservoir. Aluminium housing offers light weight combined to considerably high capacity. Two different housing options.

(from AT, BE, CH, CZ, DE, EE, ES,
FI, FR, IE, IT, PT, SE, SK, UK)
filtrationinfo@parker.com

www.parker.com/hfde

Applications:

- Industrial gear systems
- Diesel engine lubricating systems

Specification

Duplex filter:

One reservoir can be closed for service, vertical installation. Length 2 includes 2 elements/side and length 3 includes 3 elements/side.

Connections:

Square flanges with DN65/PN16 dimensioning. Standard delivery includes blind counter flanges according to DIN 2527.

Maximum operating pressure:

8 bar

Seal material:

Fluoroelastomer

Operating temperature:

-20°C...+100°C. For other temperatures consult Parker Filtration.

Housing material:

Aluminium

Weight:

Length 2: 49.0 kg

Length 3: 62.5 kg

Maximum flow rate:

600 l/min (36 m³/h)

Indicator options:

Visual, electrical or electronic indicator requires an indicator block. For details see indicator options table in product description page and catalogue section 4.

Primary filter:

- Length 2: two filter elements per reservoir
- Length 3: three filter elements per reservoir
- Filtration materials
 - Resin impregnated heavy duty cellulose paper 15µm nominal
 - Glassfibre Microglass III
 - Cleanable metal mesh

Secondary filter:

- Filtration material cleanable metal mesh
- Filtration degree 60µm

Fluid compatibility:

Suitable for use with regular hydraulic and lubrication oils. For other fluids consult Parker Filtration.

Type	A
Length 2	590
Length 3	775

DF2035 Series

Pressure Drop Curves

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

The recommended level of the initial pressure drop for this filter is maximum 0.5 bar.

Δp -curves are measured at 30 cSt.

If the medium used has a viscosity different from 30 cSt, pressure drop over the element can be estimated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}} \times \frac{\text{working viscosity}}{30 \text{ cSt}}$$

DF2035 housing

Length 2 element pack (2 pcs)/one side in use

Length 2 element pack (2 + 2 pcs)/both sides in use

Length 3 element pack (3 pcs) one side in use

Length 3 element pack (3 + 3 pcs) both sides in use

DFH2060 Series

Duplex Filters

Max. 2200 l/min. 10 bar

Maximum performance – minimum height

Slim welded housing construction with cast iron change over valve section. Horizontal mounting makes assembly easier in cranked positions. High dirt holding capacity and low pressure drop. Several media options. One reservoir can be closed for service.

Applications:

- Heavy duty diesel engine lubricating systems
- High flow industrial lubricating systems

Specification

Duplex filter:

One reservoir can be closed for service, horizontal installation. 1300 mm (1.3 m) free space must be reserved in front of the filter for filter element removal. Filter includes 3 elements/side.

Connections:

Square flanges with port size $\text{Ø}160$ mm. Standard delivery includes blind counter flanges.

Maximum operating pressure:

10 bar

Seal material:

Fluoroelastomer

Operating temperature:

-20°C...+100°C with elements with Nitrile seals,
-20°C...+160°C with metal mesh elements and Fluoroelastomer seals.

Housing material:

Steel/cast iron (GJS)

Weight:

390 kg

Nominal flow rate (30 cSt):

2200 l/min (132 m³/h)

Bypass valve:

For the primary filter only, opening pressure 2.0 bar

Indicator options:

Visual, electrical or electronic indicator requires an indicator block. For details see indicator options table in product description page and catalogue section 4.

Primary filter:

- Three filter elements per reservoir
- Filtration materials
 - Resin impregnated heavy duty cellulose paper 15 μm nominal
 - Glassfibre Microglass III
 - Cleanable metal mesh

Secondary filter:

- One filter element per reservoir
- Filtration material cleanable wire mesh
- Filtration degree 60 μm

Fluid compatibility:

Suitable for use with regular hydraulic and lubrication oils. For other fluids consult Parker Filtration.

DF2070 Series

Duplex Filters

Max. 1800 l/min. 10 bar

Big and tall for high flow

Welded housing construction with cast iron change over valve section. Compact, low-depth duplex construction for vertical mounting. High flow and good dirt holding capacity combined to low pressure drop. Several media options for heavy fuel oil and lube systems.

Together, we can change the course of hydraulic and lube maintenance history aboard ship and in dock.

DF40 Duplex Filters

EPF "iprotect" high pressure filter

iCountPD

Parker is the first name for filtration aboard ship, offshore and on the dock with a unique blend of marine fuel and lube filtration products and innovative customer solutions. Everything from on-deck winches and cranes, power generators to the engine room and steering hydraulics require Parker quality filtration. For predictive maintenance needs there's the Parker Fluid Contamination Monitoring programme with particle analysers, detectors and bottle sampling models for maximum portability.

ENGINEERING YOUR SUCCESS.

Par-Test™

Laboratory Analysis Service

System performance does not rely on luck. Best practice for reducing cost of ownership

Oil Analysis service

The Par-Test service is a complete and comprehensive laboratory analysis performed on a small quantity of fluid supplied by the customer. Contamination monitoring and reporting of fluids has never been more important as part of the predictive maintenance and system monitoring programme.

Contact Information:

Parker Hannifin
Hydraulic Filter Division Europe

European Product Information Centre
Freephone: 00800 27 27 5374
(from AT, BE, CH, CZ, DE, EE, ES, FI, FR, IE, IT, PT, SE, SK, UK)

www.parker.com/hfde

Product Features:

- The Par-Test service is a complete laboratory analysis service.
- Analysis is performed on a small quantity of fluid supplied by the customer.
- Parker Filtration has 3 European laboratory locations.
- The resulting Par-Test report is comprehensive in its detail.

Par-Test™

Laboratory Analysis Service

Changes to ISO Standards

The impact on filter performance reporting and the contamination code.

The changes to ISO contamination and filtration standards were brought about to solve accuracy, tracability, and availability issues. It is important to remember that both real world hydraulic system cleanliness levels and actual system filter performance remain unchanged.

However, the reporting of cleanliness levels and filter performance has changed due to the new particle counter calibration and multi-pass test procedures.

The actual calibration method.

ISO 11171 is the new particle counter calibration method and utilises calibration fluid made from ISO Medium Test Dust (ISO MTD) suspended in MIL-H-5606. The calibration fluid is traceable to the National Institute of Standards and Technology (NIST) and is designated by NIST as Standard Reference Material (SRM) 2806. ISO 11171 is replacing ISO 4402 which is based on obsolete AC Fine Test Dust (ACFTD)

It is important to note that the ISO 11171 calibration method is based on a distribution of particles measured by their equivalent area diameter, whereas ISO 4402 is based on distribution of particles measured by their longest chord. Also, the NIST work utilised scanning electron microscopy for particles below 10µm in size, whereas sizing distribution on ACFTD utilised optical microscopy.

The charts to the right show the approximate particle size relationship between the calibration methods.

Chart 1 - ISO Comparison

Former two-digit ISO 4406:1987
 $\frac{5\mu\text{m} / 15\mu\text{m}}{14 / 11}$

Former three-digit ISO 4406:1987
 $\frac{2\mu\text{m} / 5\mu\text{m} / 15\mu\text{m}}{17 / 14 / 11}$

New three-digit ISO 4406:1999
 $\frac{4\mu\text{m} (c) / 6\mu\text{m} (c) / 14\mu\text{m} (c)}{18 / 14 / 11}$

Chart 2 - Particle Size Comparison

ACTFD size (per ISO 4402:1991) µm	NIST size (per ISO 11171:1999) µm (c)

25	21.2
30	24.9
40	31.7

Laboratory Analysis Service

The Par-Test service is a complete laboratory analysis performed on a small quantity of fluid supplied by the customer.

Provision of a sampling bottle of known cleanliness and a pre-addressed bottle container, both of which are designed to be suitable for mailing, is part of the service.

Most contaminant in hydraulic or lube oil systems are invisible

Damage causing particles range from 5 to 40 micrometers in size, but the limit of human visibility is only 40 micrometers. Harmful particulate matter is often invisible, even in very high concentration. Also, acids, water and other fluid oxidation by-products cannot be easily detected by human senses. Some other means must be used to monitor fluid conditions.

Fluid analysis is the only method to check fluid conditions

Fluid analysis services may be as simple as a sample batch comparison. Or, a full laboratory treatment may be used to indicate the sources and quantity of contamination. In either case, important test results are achieved. Parker offers both types of services to fit your specific needs.

Ordering Information

Par-Test: laboratory fluid analysis

The purchase price for the Par-Test sample kit includes the pre-cleaned and sealed sample bottle, mailing tube with a pre-addressed label, sample information data sheet to be completely filled out by the end user and the complete laboratory analysis.

Par-Test: complete laboratory analysis

Par-Test is a complete laboratory analysis, performed on a small quantity of fluid. The test results are very comprehensive, and can include the following critical analysis:

- Spectrochemical analysis of over 20 wear metals and additives.
- Particle count reported over five size ranges. The particle count is expressed as an ISO cleanliness code. It is also plotted on a graph for better comparisons.
- Viscosity at 40°C, 100°C, Viscosity Index and TAN are reported.
- Water content is expressed as a % of volume. Many hydraulic systems may tolerate up to 300 ppm (.03%) of water contamination. Some bearing or lube oil systems must strictly limit water content.
- Analysis recommendations summarises Par-Test results and indicates what action should be taken to prevent any potential problems.
- Fast turnaround—test results are mailed back to you within 24-48 hours after receiving your fluid sample. Tests including Spectro-chemical analysis allow 7 days.

Par-Test: concise and complete

The Par-Test report you receive is neatly organised. You may quickly analyse the test results — or compare them to a previous sample. Using the same “unit number” on your sample information form will allow up to four test results listed on a single Par-Test report form. Par-Test belongs in your regular maintenance program. Comprehensive and accurate fluid analysis will help you prevent major hydraulic or lube oil system problems. Order Par-Test today (see below details) and see how easy and complete—fluid analysis can be.

Par-Test laboratory analysis service - Holland (Email: filtration.netherlands@parker.com) (all options)

Option	Reference code	Sample bottle included	Scope of analysis
1	6084000001	Yes	Particle count/Membrane/Water content/Microscopic photo
2	6084000003	Yes	Particle count/Water content/Spectro-chemical
3	6084000006	Yes	Particle count/Membrane/ Spectro-chemical/ Water content/Microscopic photo
Option	Reference code	Sample bottle included	Scope of supply
	6084000000	Yes	Empty bottle kit

Please consult your local Parker Hannifin representative for ordering your fluid analysis kit.

Environmental regulations may vary among countries with respect to shipment of oil samples. For Central European countries analysis is conducted in The Netherlands. Parker has multiple laboratories to cover other regional areas like Scandinavia and the United Kingdom.

Note: Please allow 24-48 hours of laboratory time plus mailing/shipping time to receive your test results.

Making portable system cleanliness available all the time

A 'use anywhere' fluid transfer solution

The Guardian portable filtration system is designed to 'clean' new oil and deliver it to a system or carry out a clean up of used fluid to its original condition. Maximum pressure 3.4 bar. Maximum flow 15 l/min. A water removal element option is also available.

Product Features:

- Guardian is designed to 'clean' new oil and deliver it to a system.
- Carries out a clean up of existing fluid to its original condition.
- Maximum pressure 3.4 bar. Maximum flow 15 l/min.
- Filters petroleum based oils, water emulsions and diesel fuels.

Guardian

Portable Hydraulic Filtration Systems

Features & Benefits

Features	Advantages
Portable and robust design	Guardian is designed to be used anywhere. Take it to the system or transfer new oil from the drum.
Lightweight design	Only 10.6 kg
Quick disconnect hose connections	Storage is simple. Guardian's compact design means it is easily stowed.
Visual indicator	Operational condition is constantly monitored
110VAC or 220/240VAC options	Guardian's power flexibility means it can be used anywhere.
A range of clean-up elements	A user can specify the media that will best achieve his clean up/filtering requirements.
Water removal element option	Water removal from the system is an important requirement for fluid efficiency.

Note: 15 l/min / Fluid transfer at a controlled rate

- Fluid transfer
- Offline reservoir clean-up
- Injection moulding machines
- Royal navy surface fleet systems
- Paper mills
- Industrial equipment
- Mobile equipment
- Marine system support

The Parker Filtration Guardian portable filtration systems.

Guardian is a portable filtration system with two main functions: to ensure that new 'dirty' fluid often contaminated during handling, is delivered to the system at a specific cleanliness; and to permit periodic clean up of existing fluid to original condition.

Recommended fluids: Petroleum based oils, water emulsions and diesel fuels.

Application Example

A hydraulic system reservoir had become heavily contaminated and the hydraulic system was in danger of a catastrophic failure from particulate and water contamination. These contaminants were introduced from various points – airborne, wear and introduction of new 'dirty' fluids. The Guardian filtration system was installed into the hydraulic systems reservoir and run completely off-line for a period of time until acceptable contamination levels were achieved.

This off-line attachment allowed the hydraulic system to continue operating without costly downtimes. Additionally a Water Removal (WR) Element was also fitted to the Guardian, which radically reduced the water contamination within the entire system.

This customer will 'only now' introduce new fluids into his hydraulic application by using the Guardian filtration system and in addition utilises the Guardian off-line option to maintain and protect his system.

Contamination levels are monitored by an LCM202022 which controls the Guardians operation.

Result: reliability and complete confidence restored.

Product Features:

- Filtration unit offers both permanent and offline fluid cleaning where higher levels of contamination are expected.
- Lightweight design. Spin-on 10 micron Abs. element.
- Maximum pressure 6 bar. Maximum flow 15 l/min.
- Robust construction.

Filtration Unit

Hydraulic Service Equipment

Features & Benefits

Features	Advantages	Benefits
Single phase and three phase motor options	Flexibility of power output	End user choice dependent on application
15 l/min flow	Fluid transfer at a controlled rate	Reliable fluid transfer from drum to system
Red/green visual indicator	Clear indication of condition during operation	High visibility during operation
Robust construction	Reliability designed in	Designed to be used even in the most demanding conditions
Spin-on element	Easy change element	10 micron Abs. elements
Lightweight design	Easy to locate when and where required	Take the unit to the application. It's that easy

Typical Applications

- Fluid transfer
- Small lubrication systems
- Constant flushing loops
- Maintenance flushing
- Offline filtration in circuits where pressure and flow pulses are expected

The Parker Filtration Service Equipment.

Designed to offer both permanent and offline cleaning where higher levels of contamination are expected and portable additional clean-up capability as part of your preventative maintenance package.

Specification

Electric motor

Frame Size: IEC Frame 63. Foot and flange 'D' (Flange IEC.F115). Totally enclosed fan cooled.

Windings: 380/420 volt 3 ph/50 Hz, 220 Volt 1 ph/50 Hz 110 Volt 1 ph/50 Hz.

Power: 0.18 kW (1/4 hp).

Speed: 1400 rev/min.

It is recommended that the Unit is wired independently from the main system when permanently installed, to facilitate the simple changing of the filter element without interrupting the main system.

Filtration unit description

The Parker 'Filtration Unit' consists of an electric motor directly coupled to a hydraulic pump, which has a built in bypass fitted and spin on filter element. Fluid drawn in at pump inlet is circulated through the filter element and is thus cleaned before being delivered from the outlet port. A built in bypass valve safeguards the element in the event of blockage and returns oil to the pump inlet, this ensures that all fluid output from the unit is filtered, whatever the operating conditions. A visual element condition indicator is fitted to the pump. A unit is available without electric motor for customers who prefer to supply their own. See installation notes and part numbers for ordering.

Pump and bypass valve

Pump: Lobe type for quiet running.

Flow: 15 l/min.

Connections: Inlet G¹/₂ (1/2" BSP).
Outlet G³/₈ (3/8" BSP).

Bypass Valve: Cracks at 1.5 bar approximately. Bypassed oil is recirculated within the pump. Bypassed oil is reintroduced into the inlet port and does not pass the filter. Bypass operates when the element is contaminated and needs replacing. This condition will be made clear by the visual indicator. The Bypass Valve could also open when being used with high viscosity fluids, thus effectively reducing the unit output.

Filter and condition indicator

Filter Type: Rapid replacement spin-on can with 10µ cellulose element. Ensure that end clearance (20mm) is available to permit element withdrawal. 10µ absolute. MXR8550

Visual indicator

Has green and red zones on the dial. Needle in the green zone indicates normal operation. When the needle enters the red zone, the bypass valve will permit a flow of oil to return to the pump inlet – The element will then need to be replaced. The bypass is fully open when the needle is at the extreme of the red sector.

Sound level

The Filtration Unit under normal conditions will operate at a sound pressure level of approximately 65 dBA.

Installation Details

Filtration Unit

Hydraulic Service Equipment

Sectioned Detail

Installation and Operational Notes

The Filtration Unit is suitable for mineral based oils. Maximum viscosity at start up condition 850 centistokes-minimum viscosity 8 centistokes. Note that at 850 centistokes output will be reduced due to opening of bypass. Maximum operating temperature +90°C (194°F).

The inlet pipe should be as large and as short as convenient to reduce inlet depression to a minimum. It should not be less than 12mm (0.47") internal diameter.

Suction element SE75111110 is supplied with all assemblies and must be installed. Ensure that a minimum 75mm (2.95") head of oil is maintained above the suction element.

The outlet pipe should be as large as possible to reduce the possibility of delivery pressure exceeding the bypass valve setting. It should not be less than 10mm (0.39") internal diameter. The discharge end of this pipe should always be below the oil surface to minimise aeration. It is equally important, to ensure the ends of the inlet and outlet pipes are as far apart as possible. It is recommended that a baffle be positioned between the suction and return pipes, to give maximum circulation of oil.

Installation details – 2742

The Filtration Unit is available without an electrical motor, any type motor may be used of identical frame, flange and shaft size to that stated in the specification. Remove the key, fitted to electric motor shaft. There are four nuts and bolts M8-1.25mm thread supplied loose, the pump housing is complete with a shaft adaptor with internal drive pin.

To fit pump to electric motor simply insert drive shaft of motor into the pump drive adaptor ensuring the drive pin engages in shaft keyway and that the locating spigot are correctly engaged. Complete the assembly by fitting the four nuts, bolts and washers.

Ideal Application

Ordering Information

Standard products table

Part number	Description	Weight	Replacement elements

10MFP Series

with Moduflow *Plus*
Portable Filtration Trolley

The ideal way to pre-filter and transfer fluid

Transfer fluid from drums or storage tanks

Using a Parker portable filter trolley is the most economic way to protect your system from the harm that can be caused by contamination. *Option.* Consider specifying an icountPD particle detector to allow accurate detection of particulate when transferring oil.

The CE marked 10MFP filtration trolley will operate with a maximum recommended viscosity of 800 cSt.

Product Features:

- 10MFP hydraulic trolley is the ideal way to pre-filter and transfer fluids into reservoirs or to clean up a system.
- Heavy-duty frame but still lightweight and portable.
- Maximum flow 38 l/min.
- CE marked.
- 10MFP trolley operating viscosity range - use below 800 cSt. (Note: icountPD recommended viscosity level is 108 cSt.)
- Par-Gel water removal elements available.
- icountPD particle detector with MS Moisture Sensor option.

10MFP Series

Portable Filtration Trolley

Applications for Portable Filtration Trolley

- **Filtering new fluid before putting into service**
- **Transferring fluid from drums or storage tanks to system reservoirs**
- **Conditioning fluid that is already in use**
- **Complimenting existing system filtration**
- **Removing free water from a system**
- **For use with fluids such as hydraulic, gear and lube oils**
- **Maximum viscosity is 800 cSt. The icountPD configuration with an online STI size 0 sensor allows a fluid viscosity range of 1 to 108 cSt**

Parker portable filter trolleys are the ideal way to prefilter and transfer fluids into reservoirs or to clean up existing systems.

Fluid should always be filtered before being put into use. New fluid is not necessarily clean fluid. Most new fluids (right out of the drum) are unfit for use due to high initial contamination levels. Contamination, both particulate and water, may be added to a new fluid during processing, mixing, handling and storage.

Water is removed by installing Par-Gel elements in the outlet filter. Par-Gel elements are made from a polymer which has a very high affinity for free water.

Once water comes into contact with this material, it is removed from the system.

The Parker portable filter trolley uses two high capacity ModuFlow Plus filters for long element life and better system protection. The first stage (inlet) filter captures larger particles, while the second stage (outlet) filter controls finer particles or removes water. A rugged industrial quality gear pump gets the job done fast.

Using a Parker portable filter trolley is the most economical way to protect your system from the harm that can be caused by contamination.

Features	Advantages	Benefits
<ul style="list-style-type: none"> • Two filters instead of one w/ 2.5 times increased DHC 	<ul style="list-style-type: none"> • Pump protection and long element life 	<ul style="list-style-type: none"> • Element cost savings and trouble-free service

Features

Hose & wand assembly

- Ready to use
- Flexible hoses for tight spots
- Kink-resistant hose prevents pump cavitation

icountPD

- Independent monitoring of system contamination trends
- ISO code range 7 - 22
- Self diagnostic software
- Moisture sensor [%] RH

Service cover

- Top-accessible for easy changing of elements

Visual indicator

Heavy Duty frame

Dual filters “Moduflow” type

- Two stage, double length filtration for long element life and pump protection

Elements (see ordering information)

- Available for both particulate and Water Removal (WR) options

Electrical Box

- 10MFP motor/pump current trip limiter set to 240V unit = 3.50 Amps
110V unit = 6.00 Amps

Gear pump

- Industrial quality
- Quiet operation
- Dependable, long life

Drip tray

- Helps keep the work area safe and clean

Technical specification

Dimensions (Approx.) (mm / inches)	A - Height : 1029mm / 40.5" B - Width : 648mm / 25.5" C - Depth : 483mm / 19"
Weight (Approx.) (Kg / lbs)	62kg / 137lbs
Principle of operation IPD	Laser diode for optical detection of actual particulates
International codes	ISO 7 - 22
icountPD calibration	By recognised online methods confirmed by the relevant ISO procedures: MTD - via a certified primary ISO 11171 automatic particle detector using ISO 11943 principles, with particle distribution reporting to ISO 4406:1996
icountPD recalibration	Every 12 months: commoninfo@parker.com
Unit Ambient storage temperature	-26°C to +70°C (-79°F to + 158°F)
Unit operating environment	DO NOT use the filtration trolley in wet or damp environmental conditions
Recommended fluid operating viscosity	Up to 108 cSt (500 SUS) (0.85 Specific Gravity)
Filter trolley operating viscosity range	Use below 800 cSt (3880 SUS)

Pump Flow Rate	38 l/min (10 GPM)
1st stage filtration (Suction / Inlet Filter)	Micron rating specified in part number, visual indicator (Optional), 0.2 bar (3 psi) bypass preventing pump cavitation
2nd stage filtration (Pressure / Outlet Filter)	Micron rating specified in part number, visual indicator, 1.7 bar (25 psi) prevents excessive pressures
Suction / Pressure Hose	PVC (Standard, 1 metre (39"))
Suction Pressure Wand	PVC (Standard, 1 metre (39"))
Certification	IP22 rating EN61326-1-2006 Electrical equipment for measurement, control and laboratory EN61029-1-2009 + A11:2010 Modified Safety of transportable motor operated electric tools 2006/42/EC Machinery Directive
Construction	Cart frame = Steel Filter head = Aluminium Filter bowl = Steel Hoses = PVC (std.) Wands = PVC (std.) Steel tube
Electrical Motor	10MFP - ¾ hp@ 3450 rpm, O.D.P. Thermal overload protection.

New feature!

'SmartCart'

A diagnostic filter trolley - the 'SmartCart'. The icountPD particle detector can be mounted to the standard frame of the filter cart for enhanced monitoring of your hydraulic system.

Oil Type versus Recommended Kinematic Viscosity Chart for icountPD operation*.

Oil Type	Kinematic Viscosity @ 40°C in cSt	Kinematic Viscosity @ 30°C in cSt	Kinematic Viscosity @ 20°C in cSt	Kinematic Viscosity @ 10°C in cSt
ISO 7	7	9.5	13	19
ISO 10	10	14	20	32
ISO 15	15	25	35	60
ISO 22	21.6	35	60	108

ISO 220	220	400	850	2000

* yellow boxes= the work range of 10MFP and icountPD operation

Typical Fluid Cleanliness Level Requirements

Many manufacturers of hydraulic components have established fluid cleanliness levels for their components. Using a portable filter trolley can be a very effective way to reach and maintain these cleanliness levels.

Component	ISO Cleanliness Level
Servo control valves	16/14/11
Proportional valves	17/15/12
Vane and piston pumps/motors	18/16/13
Directional and pressure control valves	18/16/13
Gear pumps/motors	19/17/14
Flow control valves cylinders	20/18/15
New fluid	20/18/15

Filter Trolley Element Performance

Media Code	Filter Media	Capacity (Grams)
40W	Woven Wire	*
40SA	Synthetic	*
20Q	Microglass III	140
10Q	Microglass III	135
05Q	Microglass III	130
02Q	Microglass III	110

Notes: Multipass test run @ 80 l/pm to 3.5 bar terminal - 5 mg/l BUGL.

Filter Trolley Performance

Fluid cleanliness levels are a function of initial contamination levels, contamination ingress rates, reservoir size and filter element efficiency. The chart below lists approximate time requirements to achieve certain cleanliness levels based on the assumptions noted.

Reservoir Capacity (Litres)	Time Required (Hours)	Projected Cleanliness Level (ISO)
190	0.5	20/18/15
190	1.0	17/15/12
190	2.5	16/14/11
378	1.5	18/16/13
378	2.5	17/15/12
378	4.0	16/14/11
757	2.5	19/17/14
757	3.5	18/16/13
757	5.0	17/15/12

Notes:

The results in the chart are based on the following assumption:

1. Initial contamination level is 500,000 particles greater than 10 micrometers per 100 ml of fluid (10MFP trolley).
2. Inlet filter fitted with 40SA element; outlet with 20Q element.
3. System ingress rate equal to 1×10^6 particles greater than 10 micrometers entering the system per minute.

Par-Gel Media Water Capacity

Model	Fluid Viscosity	Capacity
10MFP	14cSt	500 ml
	43cSt	300 ml

Notes:

1. Par-Gel elements are designed to remove "free water", which is defined as water that is above a particular fluid's saturation level.
2. Capacity is very dependent on flow rate and viscosity. Not recommended with fluids in excess of 108 cSt (500 SUS).

Assembly

1. Install hoses to inlet and outlet filters by threading the hose end with the straight thread o-ring seal fitting into the filter flange.
2. Connect the PVC tube wands to the swivel fitting on the hose end. When servicing the PVC tube wand, do not over-torque the metal fittings going into the PVC coupling. Over-torque will result in cracking the coupling. Generally, 1/4 turn beyond hand-tight is sufficient.

Operating Instructions

1. Insert the inlet wand assembly into the supply fluid receptacle (drum/reservoir). The RFP filter is the inlet filter.
2. Insert the outlet wand assembly into the clean fluid receptacle (drum/reservoir). The ILP filter is the outlet filter.

Caution: Do not kink the hose assemblies, this may result in excessive vacuum or pressure at the pump.

3. Verify that the ON/OFF switch is OFF and plug the cord into the proper grounded power source (3 wire).
4. Turn switch to ON position and check outlet wand for oil flow. Allow 30 to 60 seconds for filters to fill with oil. If repeated attempts to obtain oil flow fail, check pump inlet fittings for tightness, remove inlet filter access cover and verify the cover sealing o-ring is in place. For very viscous fluids it may be necessary to pour 1 or 2 quarts of fluid into the RFP inlet filter housing to prime pump initially.
5. The condition of the filter element should be monitored by observing the cleanliness indicator on the outlet filter. When the indicator is in the CHANGE position, both inlet and outlet filter elements MUST be replaced to prevent fluid from going through the bypass in the filters.

6. The inlet filter element is provided with a 0.2 bar bypass spring, and prevents the pump from cavitating if the element is not changed. The outlet filter element is provided with a 2.4 bar bypass spring to prevent excessive pressure which may be harmful to personnel or to the filter trolley.

Warning: The filter bypass spring acts as a relief valve for the pump. Do not restrict the outlet hose with a shut-off valve which will defeat the function of the bypass valve, causing excessive pressure, which may be harmful to personnel or to the filter trolley.

7. The cleanliness indicator works on differential pressure and will indicate the condition of the element (CLEAN, CHANGE, or BYPASS).

NOTE: The filter trolley must be in operation for the indicator to read properly.

Maintenance Instructions

1. Turn switch to OFF position and unplug cord from electrical outlet.
2. Remove tube wands from oil to prevent siphoning.
3. Loosen hex head screws on filter cover. Turn cover to clear screws, remove cover.
4. Pull filter element from the filter head.

a) Replace the synthetic or Microglass III elements. Verify replacement.

b) Wire mesh elements can be cleaned. Ultrasonic cleaners provide best results.

5. Make sure element o-rings seat properly into the head, making sure that the notch on the element lines up with the notch in the head.
6. Inspect the cover o-ring and replace if necessary.
7. Relocate the cover and tighten hex head screws until they are snug. Do not over-torque these screws (Max torque is shown in maintenance leaflet). Do not interchange the inlet filter cover with the outlet filter cover. (The inlet filter has a "RFP" prefix, the outlet filter has a "ILP" prefix).
8. Contact the Parker HFDE regarding IPD calibration.
9. IPD removal: remove oil lines from the IPD at the two fittings closest to the IPD. Disconnect the two cables from the IPD. Remove IPD from trolley via two screws. The trolley can be used without the IPD as long as the sample hoses are removed from the System 20. Protect sampling connectors from contamination.

Trouble Shooting

Problem	Cause	Solution
Does not start	ON/OFF Switch No electrical power Defective motor	Turn switch ON, replace switch if defective Plug in cart Contact service department
No oil flow or erratic pump noise	Filter housing not filled with oil Suction leak Defective pump	Allow pump to run 30 to 60 seconds Check tightness of inlet fittings Check o-ring in inlet filter cover for nicks Kink or restriction in inlet hose Add 1 or 2 quarts of oil to inlet filter Contact service department
Indicator reads CHANGE or BYPASS	Element dirty Oil extremely cold or viscous	Replace or clean elements (both filters) Change element to coarser micron rating
Indicator does not seem to move	No outlet element 40 micron element installed in outlet filter	Install element Check trolley model number to verify correct element. The inlet filter has a rating RFP prefix; the outlet filter has an ILP prefix

PVS Series - Models 185, 600, 1200, 1800 and 2700

Portable Purification Systems

Reduce the catastrophic results of water contamination

Eliminate water from the hydraulic system

The PVS Series Portable Purification Systems, available in several models, is used to draw water contaminated fluid out of a system, remove the water content and return the 'clean' fluid to the reservoir. Maximum flow 170 l/min (PVS2700). Reduce the catastrophic results of water contamination.

Product Features:

- PVS draws water contaminated fluid out of a system.
- Removes water, air and particulate content and returns the 'clean' fluid to the reservoir.
- Maximum flow 170 l/min (PSV2700).
- Reduce the catastrophic results of water contamination.

PVS Series

Portable Purification Systems

Effects of Water Contamination

Water is one of the most common and destructive contaminants in a fluid system. When water contaminates a system, it can cause serious problems such as:

- Corrosion by etching metal
- Fluid breakdown, reduction of lubricating properties, additive precipitation, and oil oxidation
- Reduced dielectric strength
- Abrasive wear in hydraulic components

Typical saturation points		
Fluid type	PPM	%
Hydraulic fluid	300	.03%
Lubrication fluid	400	.04%
Transformer fluid	50	.005%

Free water occurs when oil becomes saturated and cannot hold any more water. This water is usually seen as cloudy oil or puddles of water at the bottom of an oil reservoir. Water which is absorbed into the oil is called dissolved water. At higher temperatures, oil has the ability to hold more water in the dissolved stage due to the expansion of oil molecules. As the oil cools, this ability reverses and free water will appear where not visible before. In addition to temperature, fluid type also determines the saturation point for your system (see chart above).

Principles of Operation

Contaminated oil is drawn into the Parker portable purification system by a vacuum of 25 In/Hg. The oil passes through the in-line low watt density heater/s where the oil is heated to an optimum temperature of 66°C (150°F).

The oil then enters the distillation column where it is exposed to the vacuum through the use of dedicated dispersal elements. This increases the exposed surface area of the oil and converts the water to a vapor form, which is then drawn through the condenser by the vacuum pump. The vapour returns to water and drops into the condensate holding tank - this can then be drained off at a later stage.

The water-free oil falls to the bottom of the vacuum chamber and is passed through a final particulate removal filter by a heavy duty lube oil pump.

Clean dry oil re-enters the reservoir/system via the outlet port.

Applications for PVS Portable Purification Systems

- **Paper mills**

- Dryer lubrication
- Hydraulic
- Compressor lubrication
- Calenders

- **Steel mills**

- Bearing lubrication
- Continuous casters
- Press roll lubrication

- **Power generation**

- Turbine oil
- Transformer oil
- EHC systems

- **Industrial/aerospace**

- Test stands
- Machine tools

Features	Advantages	Benefits
Variable flow circuit	Allows oil to heat to required temperature quickly	Starts removing water quickly
Moisture sensor	Real-time water content indication	Indicates when safe water content level is obtained
Condensate holding tank	Captures removed water/solvents Large enough to provide long service interval	Eliminate potential hazard of exhausting to atmosphere Reduced maintenance costs
Compact size	Smallest envelope in the industry Ease of portability	Fits through doorways and down narrow aisles Increased use
Forklift guides Lifting eyes	Provides safe and secure method to lift unit	Employee safety Easily transported
Programmable thermostat	Maintains oil within 1°C Prevents overheating oil	Unattended operation Increases oil life
Automatic operation	Unattended use	Reduced labour costs Increased running time
Reverse pole switch/phase fail	Change motor rotation for different power source locations	Flexibility, less maintenance Prevents incorrect rotation
High temperature safety circuit	Shuts down heater if primary contactors fail Oil can never exceed 120°C (250°F)	Prevents system damage Worker safety
Circuit breakers utilised in electrical panel	No fuses to replace Simple diagnostics	Fewer spare parts, increased uptime Reduced maintenance
Available with EPR seals and stainless steel	Phosphate ester compatible	Specifically designed for application
Solid state heater contactor	Longer more reliable service life	Reduced downtime

PVS Series

Portable Purification Systems

Potential contaminant	PVS performance
Solid particulate 14/13/10 attainable	ISO cleanliness code*
Water 80-90% of dissolved water.	Removes 100% of free water,
Air 90% of dissolved air.	Removes 100% of free air,
Gases 90% of dissolved gases.	Removes 100% of free gases,

* When utilising 2Q media

PVS (Vacuum dehydration) compared to other technologies

Centrifuge units – Removes free water only; has difficulty breaking stable emulsions; larger envelope dimensions but lower flows; higher initial and operating costs.

Desiccant units – Have limited water removal capability due to absorbing material; only removes air ingressed particles; expensive compared to the volume of water removed.

Coalescer units – Removes free water only; has difficulty breaking stable emulsions; does not work well in viscous fluids (>23cSt); much larger in size compared to PVS.

Typical Performance

Tank size	227 litres (50 gallons)
Run time	62 minutes
Parker model	PVS 600 (37.9 l/min)
Water content (ppm)	Start: 10,000 PPM (1.0%) Stop: 50 PPM(0.005%)
Contamination level	Start: ISO 21/18/16 Stop: ISO 16/14/11

Start

Stop

Estimated Water Removal Time 5000 ppm (0.5%) to 150 ppm (0.015%)

PAR◇FIT™

Hydraulic and Lubrication
Interchangeable Element Range

Over 50,000 reasons to choose PAR◇FIT™

Quality interchange elements with a proven record

The Parfit range offers end users, maintenance engineers and manufacturers a range of over 50,000 Parker Parfit quality interchangeable elements using Microglass III and Ecoglass III media. Reduce stockholding, cut costs and ensure reliable and quality filter performance.

Contact Information:

Product Features:

- **PAR◇FIT™** elements are manufactured to the same exacting standards as Parker original elements using Microglass III and Ecoglass III media.
- Quality backed by Parker's unrivalled technical resources.
- Reduce stockholding and costs by sourcing all your replacement elements from Parker.
- Interchange elements for Pall, Hydac, Mahle, Internormen, MP Filtri, Donaldson and over 300 more manufacturers.
- Cross reference information available for over 50,000 part numbers.

Hydraulic and Lubrication Interchangeable Element Range

Specification

Features	Advantages	Benefits
Microglass III replacement elements	Multi-layered design producing high dirt holding capacity and high efficiency	Great performance value
	Wire support reduces pleat bunching and keeps performance consistent	Reliable performance throughout element life
		Reduces downtime and maximizes element life
Coreless Ecoglass III replacement elements	No metal content in element	Environmentally friendly disposal by incineration
	Overall weight reduced by 50%	Lower element replacement costs
	Easy compaction of used elements	Lower disposal costs
	Eco adapters available	Retrofit coreless design to housings already installed
Complete performance data disclosure	All pertinent information is provided in an easy to compare format	No hidden deficiencies
		Easy selection of correct interchange part number
Elements manufactured to exacting standards of original elements	Performance guarantee as good if not better than original fit	Durable, rugged and reliable construction with high quality standards

Typical Applications

- Industrial power units
- Mobile construction equipment
- Forestry equipment
- Marine power plants
- Agricultural equipment
- Lorry mounted cranes
- Waste management trucks
- Wheeled loaders
- Lift trucks

There's only one solution

When it comes to replacement hydraulic and marine filter elements there is only one solution: The **PAR◇FIT™** interchangeable range.

With over 20,000 stocked, off the shelf variations, there's a **PAR◇FIT™** element to fit most sizes and makes of filters on mobile, construction, agricultural and industrial plant.

Every **PAR◇FIT™** element is manufactured in Europe to the highest standards and is backed by our unrivalled technical support and money back guarantees.

That means that you can reduce stockholdings, cut costs and be sure of the ultimate performance, with long, trouble free operating life.

PAR◇FIT™ filters are available from ParkerStores and authorised distributors throughout Europe.

Hydac interchange element range

- The latest interchange elements range added are for the latest Hydac "R" type elements.
- Replacement sizes available are for Hydac: 0030, 0060, 0075, 0110, 0160, 0165, 0240, 0330 0500, 0660, 0850, 0950, 1300, 1700 and 2600.
- Featuring Fluroelastomer seals as standard for optimum performance.
- Top and bottom end caps manufactured from glass reinforced nylon.
- Top end cap includes integrated bypass assembly.
- Bottom end cap features a bayonet locking lug for use with the re-useable contamination retainer (Not supplied).
- Elements are suitable for use with the following Hydac housings: RD, RFD, RFM, RFL, RFLD, NF, NFD and oil service units as well as many OEM applications.

Marine PAR◇FIT™

Interchangeable Element Range

The marine replacement solution

New to the **PAR◇FIT™** family is a range of Marine Parfit Elements for a number of the most popular marine element competitors. Every Marine **PAR◇FIT™** element is manufactured in Europe to the highest standards and is backed by our unrivalled technical support.

You can reduce stockholdings, cut costs and be sure of the ultimate performance. Parfit filters are available from ParkerStores and authorised distributors throughout Europe.

Typical Applications:

- Industrial power units
- Central lubrication systems
- Diesel engine lubrication
- Marine fuel systems
- Power plants
- Gearboxes
- Wind turbines

FEATURES	ADVANTAGES	BENEFITS
Microglass III replacement elements	Multi-layered design producing high dirt holding capacity and high efficiency	Great performance value
	Wire support reduces pleat bunching and keeps performance consistent	Reliable performance throughout element life
		Reduces downtime and maximizes element life
Coreless Ecoglass III replacement elements	No metal content in element	Environmentally friendly disposal by incineration
	Reduced overall weight of 50%	Lower element replacement costs
	Easy compaction of used elements	Lower disposal costs
	Eco adaptors available	Retrofit coreless design to housings already installed
Complete performance data disclosure	All pertinent information is provided in an easy to compare format	No hidden deficiencies
		Easy selection of correct interchange part number
Elements manufactured to exacting standards of original elements	Performance guarantee as good if not better than original fit	Durable, rugged and reliable construction with high quality standards

Static control filter elements

Filtration technology improving
safety and oil life time

Static-free is a promise difficult to fulfil

It is not only a filter - the overall portfolio of system components, circuit layout, oil brand and type and environmental conditions have an important influence on the electro-static process in systems and if it occurs to a level that can cause damage.

Parker Static Control Media is an effective method of reducing the overall impact of the electro-static process. **For a static free solution, the complete system and its environment needs to be considered and evaluated, not just the filter in isolation.**

Parker Filtration offers support with analysis of the system oil, wear & tear on system components and the condition of the filter elements.

- Parker Static Control Filter media supports the reduction of varnish sealed in an oil system.
- Parker Static Control elements typically extend the oil life time.
- Using Parker Static Control Filter elements offers end-users no compromise in efficiency, dirt holding capacity or flow pressure drop.
- No vessel modifications are required.
- A 'drop-in' solution for system designers and maintenance engineers.
- Available in a wide range of element configurations.

Static-electric charging of oil reduces oil and system life time

Parker is pleased to present new patent-pending solutions to eliminate the negative impact of electro-static charging. Hydraulic fluids can be sensitive to electro-static charging when being pumped through a system or flowing through a fibrous synthetic filter media structure. The particles/molecules in the hydraulic fluid can gain electro-static load. The problem is related to the negative impact of discharging this load.

Electro-static charging can result in a sudden static discharge (sparks in oil) that, as a consequence, creates local micro hot spots in the oil. Like lightning the discharge occurs in milli-seconds and is associated with very high, localised increases in the temperature of the oil. This temperature increase causes damage to the molecular structure of the oil and hence affects its performance. The process of electro-static charging can eventually cause varnishing in the system.

Example of holes burned in the filter media

Because the discharge often occurs directly downstream of the filter element, the sparks can burn holes in the filter media. This directly influences the filter efficiency.

Fluid with good conductivity

Electro-static charging can occur anywhere in the system. A conductive fluid is able to prevent the local accumulation of electro-static charge. In various components connected to earth a streaming current can be measured.

Fluid with reduced conductivity

When the fluid conductivity is too low, the amount of Electro-static energy can achieve a level which is sufficient to create a sudden discharge. Just as a balloon can accumulate a specific volume of air, the lower the fluid conductivity the more electro-static energy can build up before a discharge (sparks in the oil) occurs.

Impact of oil groups

Differences amongst the base oil groups can have an impact on the presence of the electro-static discharge process in systems.

Group I oils usually apply a mixture of different hydrocarbon chains with limited or no uniformity. Typically these oils are used in basic applications.

Group II and III oils are in general more applied for demanding applications. **The lower zinc content can have a negative impact on the fluid conductivity.** Group III oils are commonly mixed with additives and positioned as synthetic or semi-synthetic oils. Oil manufacturers can decide to add additives to improve the fluid conductivity.

Group IV are more often applied for automotive and industrial applications, using chemical engineered base stocks like Polyalphaolefins (PAO's).

Group V includes Esters and Polyolesters, these are not used as base oils but added to other base oils. This influences the conductivity amongst the oils covered by this group.

Static-free is a promise difficult to fulfil

The electro-static phenomena can occur anywhere in the system. A filter can generate static electricity but other system components such as pumps, valves, hoses and piping can as well.

The parameters influencing the electro-static phenomena are mainly:

- Type of oil
- Oil temperature
- Air content of the oil
- Relaxation time of the oil in the hydraulic reservoir
- Fluid velocity in the system
- Electro-static energy created by components with rotating parts
- Conductivity & earthing of hoses and piping
- Weather conditions (not mathematically defined)

Table I: Typical element properties by oil group

	Group	I	II	III	IV	V
Element	P	+/- 0,05%	<0,05%	+/- 0,02%	Not included	Not included
Element	Zn	+/- 0,08%	<0,03%	<0,03%	Not included	Not included
Element	S	>0,03%	<0,03%	<0,03%	Not included	Not included
Viscosity Index	VI	80-120	80-120	>120	Not included	Not included
Saturation	%	<90%	>90%	>90%	Not included	Not included

Note: All given values are indicative

Studies have been conducted and these suggest that varnish is formed due to the thermal degradation and oxidation of the hydraulic oil. The discharge process in the oil can create thermal degradation of the oil. In addition to this, the discharge process can cause pitting of component surfaces.

Varnish can cause system damage and lower system productivity by:

- Varnish build-up on surfaces, blocking flow path of components like heat exchangers
- Causing sticking (servo-) valves
- Slower response of system components with moving parts
- Plugging filters

Varnish can block flow channels or cause 'stick-effect' in valves

Varnish is attracted to metal surfaces, the result is an overall decrease in productivity.

Parker filters available with static control media

TTF Series

Tanktop Mounted Return Line Filters, Max 500 l/min - 10 bar

- Aluminium filter head housing
- In-to-out flow
- ATEX certified version available
- Multiple - return ports (on request)

15/40/80CN Series

Medium Pressure Filters, Max 600 l/min - 70 bar

- Aluminium filter head housing
- In-to-out flow
- ATEX certified version available
- Multiple - return ports (on request)

STF Series

Tanktop Mounted Return Line Filters, Max 500 l/min - 10 bar

- Steel filter housing
- In-to-out flow
- ATEX certified version available
- Multiple - return ports (on request)

EPF iprotect® (Ecological Pressure Filter)

High Pressure Filters, Max 700 l/min - 450 bar

- Steel filter housing
- Patented filter element and reduction of waste typically over 50%
- Reduced surface area
- ATEX certified version available

BGT Series

Tanktop Mounted Return Line Filters, Max 2400 l/min - 10 bar

- Aluminium filter housing
- In-to-out flow
- ATEX certified version available
- Multiple - return ports (on request)

Other filter types available on request.

WARNING

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorised distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyse all aspects of your application, including consequences of any failure, and review the information concerning the product or system in the current product catalogue. Due to the variety of operating conditions and applications for these products or systems, the user, through their own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met.

The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice. **Offer of Sale** Please contact your Parker representation for a detailed "Offer of Sale".

The Par-Gel Filter

Water Removal Filter Elements

Stopping free water causing system damage

Increases system efficiency and machine productivity

The Par-Gel filter elements are an effective tool in controlling water related problems in hydraulic power and lubrication systems. Increases system efficiency and machine productivity and reduces the chance of catastrophic system failure.

Product Features:

- Par-Gel elements control water related problems in hydraulic power and lubrication systems.
- Helps reduce component wear and system downtime.
- Increases system efficiency and machine productivity.
- Reduces the chance of catastrophic system failure.

The Par-Gel Filter

Water Removal Filter Elements

Par-Gel filter elements are an effective tool in controlling water related problems in hydraulic power and lubrication systems.

There is more to proper fluid maintenance than just removing particulate matter. You need to remove water as well. Parker has developed Par-Gel water removal elements to be used in combination with particulate filters to provide significant benefits.

- Less component wear, consequently less component generated contaminants.
- Significant reduction of costly downtime and replacement of failed components.
- Increased efficiency of the system, thereby improving machine productivity.
- Less frequent replacement and disposal of contaminated fluid.
- Reduced chance of catastrophic failure.

Water as a contaminant.

Whether you used a mineral-base or synthetic fluid, each will have a water saturation point. Above this point, the fluid cannot dissolve or hold any more water. This excessive water is referred to as 'free' or emulsified water. As little as .03% (300 ppm) by volume can saturate an hydraulic fluid. Many mineral-base and synthetic fluids, unless specifically filtered or treated in some way, will contain levels of water above their saturation point.

Water is everywhere!

Storage and handling. Fluids are constantly exposed to water and water vapour while being handled and stored. For instance, outdoor storage of tanks and drums is common. Water settles on top of tanks and drums and infiltrates the container, or is introduced when the container is opened to add or remove fluid.

In-service. Water can get into the system via worn cylinder and actuator seals, or through reservoir openings. Water can come into contact with these entry points through water based cutting fluids or when water and/or steam are used for cleaning.

Specification

Condensation is also a prime water source. As fluid cools in a reservoir, the temperature drop condenses water vapour on interior surfaces, which in turn causes rust. Rust scale in the reservoir eventually becomes particulate contamination in the system.

Microbial growth as a contaminant.

Once water enters a system, growth of micro-organisms begins. Since water is one of the end products of the breakdown of hydrocarbon fluid, once started, the process is somewhat self-sustaining.

Slime is evidence of microbial growth, as is the apparent increase in viscosity of the fluid, obnoxious odour and discoloured fluid. The results are: short fluid life, degraded surface finish and rapid corrosion.

Water generated damage and operating problems.

- Corrosion
- Accelerated abrasive wear
- Bearing fatigue
- Additive breakdown
- Increased acid level
- Viscosity variance
- Electrical conductivity
- Forms of water in fluid
- Dissolved water – below saturation point
- Free water – emulsified or in droplets*.

Water in the system creates oxides, slimes and resins. Corrosion is an obvious by-product and creates further contaminants in the system.

The effect is compounded, as you now have both particulate contaminant and water working together.

The particulate contamination can be as simple as rust flaking from reservoir walls. Anti-wear additives break down in the presence of water and form acids. The combination of water, heat and dissimilar metals encourages galvanic action. Pitted and corroded metal surfaces and finishes result.

Further complications occur as temperature drops and the fluid has less ability to hold water. As the freeze point is reached, ice crystals form, adversely affecting total system function. Operating functions may become slowed or erratic.

Electrical conductivity becomes a problem when water contamination weakens insulating properties of fluid (decreases dielectric kV strength).

Testing your fluid for water.

A simple 'crackle test' will tell you if there is water in your fluid. Simply take a metal dish or spoon with a small amount of fluid. Apply a flame under the container with a match. If bubbles rise and 'crackle' from the point of applied heat, you have free water.

ParTest fluid analysis. For complete analysis, Parker offers Par-Test fluid analysis. Your Parker representative can supply you with a fluid container, mailing carton and appropriate forms to identify your fluid and its use. An independent lab performs complete spectrometric analysis, particle counts, viscosity and water content.

Results are sent directly to the requester.

* Excessive free water must be removed from the system before filtering is attempted. In systems with gross amounts of water (1% to 2% by volume), settling or vacuum dehydration should be considered before using Par-Gel filter elements.

The Par-Gel Filter

Water Removal Filter Elements

Features & Benefits

Removing water.

Using a Par-Gel water removal element is an effective way of removing free water contamination from your hydraulic system. It is highly effective at removing free water from mineral-base and synthetic fluids.

The Par-Gel filter media is a highly absorbent copolymer laminate with an affinity for water. However, hydraulic or lubrication fluid passes freely through it and the water is bonded to the filter media.

Photo above shows 'dry' Par-Gel filter media and the same media swollen with absorbed water.

Parker technology and expertise at your disposal.

Choosing the correct filters can save money and minimise problems caused by particulate and water contaminants in hydraulic and lubricating fluids. Parker provides hard data and advice on choosing from a wide range of filter configurations, flow patterns and flow pressure capabilities.

How many filter elements will I need?

Suppose you would like to remove water from contaminated oil stored in a 750 litre tank. The tank is found to have 1000 ppm of water (very contaminated). The circulation rate will be 40 lpm for the 40cSt fluid.

Example: How many single length 80CN elements will be needed to reduce the water to normal saturation levels. To find the answer, use the conversion charts and capacity curves for the 80CN-1 element.

- 1000 ppm start – 300 ppm finish = 700 ppm removed
- 700 ppm water x 0.0001% = .07%
.07% x 750 litres = 0.525 litres water total
- Capacity = 89cc at 40cSt & 40 lpm to pressure drop of 1.7 bar.
89cc per element x 0.001 litres per cc = 0.089 litres per element
- $\frac{0.525 \text{ litres total water}}{0.089 \text{ litres per element}} = 6 \text{ elements}^*$

* The replacement value of this fluid may range from €1500.00 to €4500.00 (€0.50 to €1.25 litre). An estimated element cost of €150.00 each, the saving could be as much as €3600.00!

Using Par-Gel filter elements saves money in fluid and replacement component costs. Also, the frequency of fluid disposal and the problems associated with it are greatly reduced.

Filter capacity. There are no accepted and approved water capacity testing or reporting standards. Consequently, there is virtually no way to compare one element capacity with another. It is also difficult to simulate a specific application in testing... making it hard to predict field performance.

Why the discrepancies? Water removal media capacity is the result of the interplay of four variables: flow rate, viscosity, bypass setting and the media itself.

Here's an example: two identical elements, testing the same fluid, varying only the flow rate.

This is a 15% reduction in capacity, due to changing only the flow rate! Now, look at what happens when the test flow rate is the same and the viscosity is changed.

	Element A	Element A'
Flow rate:	11 lpm	38 lpm
Viscosity:	15 cSt	15 cSt
Test capacity:	425 ml	360 ml

Twice the capacity can be achieved just by manipulating the test viscosity!

	Element B	Element B'
Flow rate:	76 lpm	76 lpm
Viscosity:	40 cSt	15 cSt
Test capacity:	250 ml	550 ml

Naturally, having a lower bypass valve setting limits the capacity. Since the life of the element is measured in pressure drop, using higher bypass valve settings will increase apparent life (all other conditions equal).

We recommend 1.7 bar bypass valves to get adequate life from Par-Gel filter elements.

Capacity also depends on the media itself. That's why Parker spent two years researching the media used in Par-Gel filter elements. We tested all known media, and worked closely with our suppliers to achieve maximum water absorbency.

Specification

How we report:

Our goal is to give our customers usable data. Why show test results at a lower viscosity (13cSt for example), if the typical application uses 41cSt fluid? So, we report at 41cSt to give typical field application capacity, and 15cSt for competitive comparisons. But keep in mind when comparing, you still have to consider flow rate.

What it all means:

You deserve to know how an element will work for you in your applications. So, we test and report our data in such a way that it helps you predict element performance and life.

Be wary of claims that say... "this element holds one litre (or 5 litres) of water". What was the test flow rate? fluid viscosity? bypass valve setting? Was it run as a 'single pass' or 'multipass' test?

Rely on Parker to give you the facts and data you need. Our goal is to better protect your systems and components...and we start up-front by telling you what you need to know.

Is there any other way to do business?

Add it all up.

Broad selection, competitive prices, off-the-shelf availability, on-time delivery, high-efficiency filter media, reduced system contaminant and longer component life. When you add it all up, we think you'll agree...

Conversion Factors

Co-Polymer and Steel Reservoirs

Hydraulic Reservoir Solutions

Features & Benefits

Parker hydraulic tank solutions are applied to a wide variety of markets		
Hyd. & lube oil filtration	Co-polymer tanks	Steel tanks
Agriculture	X	X
Construction equipment	X	X
Marine		X
Material handling	X	
Mining		X
Road building equipment	X	X
Transportation	X	X
Waste management / Environmental control	X	X

An introduction to Parker Hydraulic Reservoir Solutions

Parker's experience in designing fluid power equipment will help a system designer to save costs at every stage of hydraulic system development.

Co-polymer tank example

Original Equipment Manufacturers are continually looking to reduce manufacturing costs and increase operating efficiency and it's here that Parker Hannifin's European Filtration Division offers complete solutions. Beside high quality steel tanks supplied by Parker and featured in this brochure, Parker also designs and supplies revolutionary, lightweight co-polymer reservoirs with tank top mounted or integrated filter and tank air filter options.

Steel tank example

Both tank types can typically represent a significant contribution to cost savings. Because of the differing features and benefits between the metal and co-polymer tanks, Parker is able to offer customers the most appropriate tank concept to meet their specific requirements.

Saving costs with complete Parker Hydraulic Tank Solutions

- A partnership in supply chain management reduces costs
- An integration of reservoir functions
- Reduction of component parts
- Integrated hydraulic filter and air filter benefits
- Integrated oil level measurement benefits
- Standard & customised solutions offered
- Flexibility related to shape & dimension of each tank
- Leak-proof connections
- Parker element for guaranteed quality filtration

Typical Applications

Unique tank solutions designed to meet customer needs

Today Parker steel tank solutions are typically applied to commercial vehicle applications for example waste management and the transportation market. Customers manufacturing hook-arm systems, truck manufacturing or vehicle body builders are further examples of potential customers for a complete steel tank assembly. A more common use of co-polymer tanks can be seen in materials handling equipment, agricultural and construction equipment markets. Typical applications are warehouse trucks, smaller sized wheeled loaders, telescopic handlers, dumpers, mini excavators and agricultural machinery.

Suitable for heavy duty equipment	X	X

Design note: All customised tanks are engineered solutions based on detailed analysis of customer requirements and specifications. Detailed knowledge of co-polymer materials, implies that customised materials can be made available to meet specific demands. Depending on technical and commercial requirements, Parker is able to advise each customer individually, about the most suitable and economical reservoir solution, made from co-polymer or steel.

Co-Polymer Reservoirs

Hydraulic Reservoir Solutions

Features, Benefits & Specifications

Where a tailormade tank design is the solution

The lightweight co-polymer tank is an all-in-one solution that keeps in mind a customer's specific design requirements. Each tank is unique in terms of shape, dimensions and integrated functions. It is equipped with an integrated tank top mounted return line filter and tank air filter. All filters and air filters are supplied as standard with the patented, environmentally friendly *LEIF*[®] element.

Reliable connections

Reliable, leak-proof connections have always been a critical aspect for co-polymer tanks. Parker has developed a technology using metal attachment components. All metal attachment components are moulded in with the co-polymer tank wall, ensuring a reliable, leak-proof connection between the tank and the components that are attached to it.

Parker Filtration has designed high tech sealing solutions for tank top mounted filters.

These attached connections (e.g. a suction connection for pumps, drains, vents, or a filler opening) can easily be achieved, as well as providing indications for minimum and maximum oil levels. Metal attachment connections can be made available for hose couplings, a flange attachment or thread attachment.

Co-polymer reservoirs are designed to meet the stringent demands of our customers. All relevant aspects are analysed, from material properties and operational conditions to dynamic load and requirements for equipment servicing.

*Customised integrated metal attachment
"Tank also features integrated level measurement"*

Level measurement

Oil level indication can be fully integrated into the tank design. This feature eliminates the need for level glasses, which are fragile and an additional potential source of leakage when mounted incorrectly.

Example of customised co-polymer tank

Features, Benefits & Specifications

Example of a customised tank with an integrated return line filter and air filter

The ultimate all-in-one design

A more frequent use of co-polymer tanks located on the outside of mobile equipment often results in specific requirements relating to styling.

Despite the compact design of Parker tank top mounted filters and air filters, these parts can influence aspects related to styling or cabin accessibility.

This concept is ideal for applications where space is at a premium.

Parker Filtration's unique all-in-one design, where the return line filter and air filter are both located under one cover is a concept that offers great possibilities related to tank styling. The high quality of the co-polymer material ensures a long-term stability of the chosen colour.

This all-in-one design features the IN-AGB type return line and integrated air filter with labyrinth. The labyrinth prevents oil leakage through the air filter. The connection(s) for return line(s) and filler port are integrated in the tank. This avoids having to have hydraulic hoses placed on top of the tank.

Environmentally friendly

Parker considers care for the environment as a social obligation. The environmentally friendly *LEIF*[®] element (Low Environmental Impact Filter) is applied to the return line filters and breathers type ABL and EAB.

What makes this element so special is that the metal sleeve can be re-used. As a result, this filter element component no longer ends up in the waste disposal; only the contaminated filter medium is disposed of as chemical waste. With *LEIF*[®] filter elements, the disposal and processing cost may be reduced by as much as 50%.

The *LEIF*[®] concept safeguards the use of genuine Parker parts.

LEIF[®] elements:

- Environmentally friendly filtration
- Re-usable steel element sleeve
- Patented elements result in guaranteed quality of filtration
- Saves element disposal costs typically by up to 50%
- Supports ISO 14001 certification

IN-AGB with *LEIF*[®] element

Cost-effective

The advantages of this co-polymer concept are obvious:

- Lightweight
- Flexibility with respect to tank shapes
- Characteristics of plastic material can be customised to meet specific requirements
- Integration of several functions limits the use of individual components
- The tank can be purchased and supplied as a complete unit

Steel Reservoirs

Hydraulic Reservoir Solutions

Features, Benefits & Specifications

Parker steel reservoirs withstand extreme conditions

Standard steel tanks are often specified for commercial vehicle side mounting. Parker steel tanks are built to last in extreme conditions. Extreme weather conditions and heavy duty vehicle movements can be resisted by our tank design.

Quality design

As with co-polymer tanks, steel tanks offer leak proof connections and are vigorously tested against leakage. Additionally, they are painted with primer and topcoat to ensure maximum protection against corrosion.

To help reduce dirt build-up, our steel tanks are designed with smooth corners and the upper front part of the tank can be sloped which offers extra benefits:

- Easier service access for the filter and tank air filter
- Dirt, water, snow and ice will not adhere to the tank surface next to the breather and filter

Suction port(s), covered with anti-vortex plate(s), allow low oil levels giving the operator an increased operational capacity. Before delivery the steel tanks are thoroughly washed inside and ready for system assembly.

Steel tank with with customised chassis mounting straps

Diverse tank size options are available

With space at a premium in most truck chassis configurations and the need to deal with toolboxes, compressed air reservoirs and other equipment, tank dimensions are always an issue. To meet the specific environment requirements Parker Filtration offers several tank sizes.

Steel tanks are fully equipped. Our customers can choose from a wide choice of filter options. Parker considers care for the environment. The environmentally friendly *LEIF*[®] element is also applied to steel tank solutions. Additionally, Parker steel reservoirs are equipped with an efficient air filter, a level gauge, plugs, a suction kit and mounting brackets. The level gauge can be re-located on the other side of the tank if user visibility is an issue.

Note: For further information about Parker steel reservoir solutions, contact your local Parker Sales Company.

Product Features:

- EAB Series – air flows up to 1500 l/min. Visual gauge option.
- ABL Series – 3 micron Abs. *LEIF*® element. 2 sizes.
- 2 environmental breather options suitable for most applications.

EAB Series

Reservoir Equipment

Typical Applications

- Agricultural machines
- Articulated dump trucks
- Forestry equipment
- Wheeled loaders
- Lubricating systems
- Excavators
- Mobile cranes
- Industrial power units

Technical Data

The filter has been designed to achieve a low pressure drop and high dirt holding capacity with airflows up to 1500 l/min. A compact EAB10 with airflows up to 1000 l/min is also available.

Construction:

Glass reinforced composite housing with Eco-element.

Filter media options:

P020: High quality polyester media. 2µm (abs).

C015: Polyester media with water-resistant layer. 1.5µm (abs)

Q010: Glass fibre media. 1.0µm (abs)

Mounting options:

With 6 screws. Includes machine and plate screws, a strainer and gaskets.

External threads G^{3/4}" , G1".

Internal thread G^{3/4}".

Options:

Visual gauge type vacuum/pressure indicator.

Overpressure valve, pressure setting 0.2 bar.

EAB10 cannot be specified with an overpressure valve and vacuum/pressure gauge at the same time.

Advantages of the EAB filters:

Easy maintenance.

Indicator states the need for element change.

Quick and easy element change (no tools required).

Environmentally friendly:

EAB elements contains no metal parts: therefore it can be crushed and burned minimising the volume of waste material.

Other features:

The optional indicator is located in a safe place inside the housing.

Housing includes mounting holes for a padlock, which allows you to increase the security against theft and vandalism.

Suitable for temperatures -20°C to +80°C.

Pressure Drop Curves

$\Delta p_{total} = \Delta p_{housing} + \Delta p_{element}$. The recommended level of the initial pressure drop for this filter is max 0.02 bar (2.0 kPa).

Filter media is supported so that the optimal fatigue life is achieved.

Vacuum indicator:

ABL-1 on request only, ABL-2 0.04 bar. Visual with latch out memory.

Breather housing:

High impact strength composite.

Filter element:

LEIF[®] element.

Options:

- Adaptor with filter connection.
- Single adaptor.
- Breather with integrated pressure relieve valve for pressurised tank on request only.

LEIF[®] elements can be used for hydraulic fluids and HEES type fluids only. For other fluids contact Parker Filtration.

Triceptor

Desiccant Type Breather

Keeping water and dust out of the reservoir

A disposable air breather solution

Triceptor desiccant type breathers are easy to fit and disposable as soon as the silica gel inside turns to pink. Triceptor breathers have three main functions; besides the removal of small solid contamination they absorb water due to the high performance silica gel desiccant. The third function is to reduce oil mist leaving the reservoir and going into the atmosphere.

www.parker.com/hfde

Product Features:

- Triceptor desiccant type breathers remove contamination, absorb water in the fluid and reduce oil mist leaving the reservoir into the atmosphere.
- Triceptor breathers are easy to fit and disposable when the silica gel turns to pink.
- Cost effective Triceptor breathers are suitable for a wide range of mobile and industrial applications.

Breathers Desiccant Type

Reservoir Equipment

Specification

Materials:

Casing: Clarified copolymer polypropylene.

Cap: Copolymer polypropylene.

Stand pipe: PVC.

Filtration Element: Polyester, silica gel.

Operating Temperatures: -29°C (- 20°F) to 121°C (250°F).

Seals: None.

Maximum Allowable Operating Pressure (MAOP): .34 bar (5 psi).

Particle Removal Efficiency:

98.7% (beta 75) @ 3 micron

99.5% (beta 200) @ 4 micron

99.9% (beta 1000) @ 5.3 micron

Weight:

934330T .57 kg (1.25 lbs.) each.

934331T .79 kg (1.75 lbs.) each.

934332T 1.02 kg (2.25 lbs.) each.

Features

Foam Pads

Isolates the removal materials from contact with heavy reservoir mist and securely holds materials in place.

Filter Pads

Specially designed filter pads remove solid particulate on upstream side and then regenerate by releasing those particles when air flow reverses direction. Lower pad removes airborne contamination and second pad protects against any migration of desiccant.

Air Intakes

A total of eight air intakes may be exposed to allow air to freely flow in and out of the Triceptor.

Silica Gel Desiccant

Has the highest removal capability by volume of any adsorption method. Indicates condition by changing color.

Foam pad

Insures filter pad is properly positioned and protects it from external damage.

Molded Housing

Durable shock absorbing casing provides reliable service and simple press in mounting.

Triceptor

Desiccant Type Breather

Installation

Triceptor breathers are designed for simple installation on most equipment, regardless of mounting connection. Since TriCeptor breathers are disposable, the threaded connection allows for quick and easy maintenance. Several mounting adapters (shown below) are available to provide the desired mounting. The installation/replacement process consists of four easy steps:

1. Remove from protective plastic wrap.
2. Remove 25mm blue cap from standpipe.
3. Remove foil label to expose the necessary amount of air intake holes.
4. Twist Triceptor into mounting adapter.

Servicing the Triceptor breather is also very easy. When the silica gel changes colour from blue to a pink, the breather is no longer active and needs to be replaced. Simply remove the unit and discard properly.

Linear Measurement = $\frac{\text{mm}}{\text{in}}$

Note: Triceptor breathers comply with European REACH regulations

Air Flow Performance

The curves below show the air flow performance of the three Triceptor breathers. To insure the longest life possible, the initial clean pressure drop should not exceed 0.103 bar.

Model	Part Number	Quantity
127mm Breather	934330T	6 pcs.

Glass-Filled Nylon and Metal Breathers

IP65 Rated, Metal, Screw-on and Lockables Reservoir Equipment

Compact and lightweight reservoir solutions

IP65 Co-polymer breathers and metal breathers

The IP65 rated range of moulded, non-corrodible, glass-filled nylon air breathers combine strength with a lightweight design. Single hole, 6-hole, 3-hole and screw-on options are available; plus metal air breather, filler breather and lockable options are a proven range of quality reservoir solutions.

Product Features:

- Moulded in non-corrodible, glass-filled nylon – strong and light.
- Single hole, 6 hole and 3 hole installation.
- Screw-on breather range – G $\frac{1}{2}$ and G $\frac{3}{4}$ options.
- Compact range – G $\frac{1}{4}$, G $\frac{3}{8}$, R $\frac{1}{2}$ and R $\frac{3}{4}$ options.
- Metal filler breathers – pressurized threaded type.
- Metal filler breathers – unpressurized threaded type.
- Filter flange type.
- Lockable range for reservoir security and oil protection.

IP65 Rated Filler Breathers

Reservoir Equipment

Specification for Single and 6 Hole Installation

Option 1

Construction:
Moulded in non-corrodible glass-filled nylon combining strength with a lightweight design.

Options:
(1) single (63mm dia) hole Filler breather installation that eliminates drilled and tapped holes using self-locking clamps.
(2) 6 hole Filler Breather Installation that uses 6 x No 10 thread forming screws.
(3) 3 hole filler breather utilises 3 x zinc and clear chromate plated steel screws.

Strainers:
Unique design diffuses oil flow into the reservoir.
(1) Single length in polypropylene (95mm length)
(2) 2-piece telescopic in polypropylene (195mm length max.)

Filtration element:
Expanded polyurethane foam, 10 micron Absolute.

Seals:
Nitrile.

Working temperature:
-30°C to +90°C.

Pressurised filler breathers:
Available in 3 pressure options to maintain a positive pressure in a reservoir.

Pressurisation options:
0.2, 0.35 and 0.7 bar crack pressure.

Pressurisation valve:
Nylon/Nitrile.

Dipstick:
Available for use with options 1 and 2. Dipsticks are available in 2 lengths and in packs of 10.

Dipstick material:
ABS.

Hi/Lo indicators:
Acetal. Adjustable Red/Green level indicators.

Dipstick lengths:
200mm and 400mm.

Breather weight:
0.2Kg.

Anti-splash feature:
The unique design anti-splash feature is standard on all options 1 and 2 and allows for a dipstick to be fitted if required.

Option 1 Filler Breathers (Single Hole Installation)

Option 1. Single Hole Filler Breathers – Pressurised

Part number	Supersedes	Description 10µ abs.
AB98212011	AB.98212011.UC	Pressurised 0.2bar with 95mm strainer
AB98213011	AB.98213011.UC	Pressurised 0.35bar with 95mm strainer
AB98212001	AB.98212001.UC	Pressurised 0.2bar without strainer
AB98212021	AB.98212021.UC	Pressurised 0.2bar with telescopic strainer
AB98213001	AB.98213001.UC	Pressurised 0.35bar without strainer
AB98213021	AB.98213021.UC	Pressurised 0.35bar with telescopic strainer
AB98217001	AB.98217001.UC	Pressurised 0.7bar without strainer
AB98217011	AB.98217011.UC	Pressurised 0.7bar with 95mm strainer
AB98217021	AB.98217021.UC	Pressurised 0.7bar with telescopic strainer

Note 1: Part numbers featured with bold highlighted codes will ensure a 'standard' product selection.

Note 2: Alternate displayed part number selection will require you to contact Parker Filtration for availability.

AB98XXX Pressurised Pressure Drop Curves

AB98XXX Non-Pressurised Pressure Drop Curves

Option 1. Single Hole Filler Breathers – Non-Pressurised

Part number	Supersedes	Description 10µ abs.
AB98210011	AB.98210011.UC	Filler breather with 95mm strainer
AB98210021	AB.98210021.UC	Filler breather with telescopic strainer
AB98210001	AB.98210001.UC	Filler breather without strainer

Note 1: Part numbers featured with bold highlighted codes will ensure a 'standard' product selection.

Note 2: Alternate displayed part number selection will require you to contact Parker Filtration for availability.

Filler Breathers (6 Hole Installation)

Option 2

Note 1. Un-pressurised 6 hole fixing:

Form 6 off tank mounting holes between $\text{Ø}4.0$ and 4.4mm (dependent on the material and thickness – see guide below) equispaced on $70\text{-}73\text{mm}$ P.C.D. to suit supplied No.10 thread forming screws.

Note 2. Pressurised 6-hole fixing:

Form 6 off tank mounting holes between $\text{Ø}4.0$ and $\text{Ø}4.4\text{mm}$ (dependent on the material and thickness – see guide below) equispaced on 73mm P.C.D. to suit supplied No.10 thread forming screws.

Note 3. Reservoir mounting guide

Sheet thickness mm	Hole size mm
1.2	4.0
2.0	4.10
3.15	4.30
4.0	4.30
5.0	4.40

Telescopic Strainer

The telescopic strainer design is ideal, where reservoir depth allows, to increase the surface area of the strainer, improving still further its straining ability, oil flow-through and allowing for longer dipstick lengths.

Option 2. 6 Hole Filler Breathers – Pressurised

Part number	Supersedes	Description 10 μ abs
AB98817011	AB.98817011.UC	Pressurised 0.7bar with 95mm strainer
AB98812001	AB.98812001.UC	Pressurised 0.2bar without strainer
AB98812011	AB.98812011.UC	Pressurised 0.2bar with 95mm strainer
AB98812021	AB.98812021.UC	Pressurised 0.2bar with telescopic strainer
AB98813001	AB.98813001.UC	Pressurised 0.35bar without strainer
AB98813011	AB.98813011.UC	Pressurised 0.35bar with 95mm strainer
AB98813021	AB.98813021.UC	Pressurised 0.35bar with telescopic strainer
AB98817001	AB.98817001.UC	Pressurised 0.7bar without strainer
AB98817021	AB.98817021.UC	Pressurised 0.7bar with telescopic strainer

Note 1: Part numbers featured with bold highlighted codes will ensure a 'standard' product selection.

Note 2: Alternate displayed part number selection will require you to contact Parker Filtration for availability.

Option 2. 6 Hole Filler Breathers – Non-Pressurised

Part number	Supersedes	Description 10 μ abs
AB98810001	AB.98810001.UC	Filler breather without strainer
AB98810011	AB.98810011.UC	Filler breather with 95mm strainer
AB98810021	AB.98810021.UC	Filler breather with telescopic strainer

Note 1: Part numbers featured with bold highlighted codes will ensure a 'standard' product selection.

Note 2: Alternate displayed part number selection will require you to contact Parker Filtration for availability.

Filler Breathers

Reservoir Equipment

Option 3 Filler Breathers (3 Hole Installation)

New Options Fully Tested

As part of the design development programme for the new IP65 Filler Breathers, extensive performance and endurance testing was carried out to ensure durability and efficiency.

3-hole Filler Breathers (6-hole available)

Part number	Description 10µ abs
AB68110	Filler breather without strainer
AB68118	Filler breather with 95mm strainer

Note 1: Part numbers featured with bold highlighted codes will ensure a 'standard' product selection.

Note 2: Alternate displayed part number selection will require you to contact Parker Filtration for availability.

Note 3: Not suitable for use with B.68206/207

Note 4: 6-hole AB.68910/AB.68918 option available.

Note: Form 3 off tank mounting holes between Ø4.0 and Ø4.4mm (dependent on the material and thickness – see chart for guide) equispaced on 41.3 P.C.D. to suit No. 10 thread forming screws supplied.

Dipstick Options

Dipstick Ordering

Part number	Supersedes	Description
B68206	DIP.206	10 x 200mm Dipsticks
B68207	DIP.207	10 x 400mm Dipsticks

Note 1: Part numbers featured with bold highlighted codes will ensure a 'standard' product selection.

Note 2: Alternate displayed part number selection will require you to contact Parker Filtration for availability.

Dipsticks

The dipstick, available in 2 lengths – 200mm and 400mm, can be cut to the required length or left as it is and the Hi/Lo indicators moved and positioned on the dipstick itself by squeezing the sides of the indicator and repositioning along the dipstick.

Screw-On Type Air Breathers

Reservoir Equipment

Standard Screw-On Breathers - Specification

Option 1- G^{1/2} and G^{3/4} (Ø101)

Construction:

Moulded in non-corrodible glass-filled nylon combining strength with a lightweight design.

Option 1:

2 screw on type air breathers are available – G^{1/2} or G^{3/4} threaded base models.

Filtration element:

Expanded polyurethane foam, 10 micron absolute.

Seals:

Nitrile.

Working temperature:

-30°C to +90°C.

Pressurised air breathers:

Available in 3 pressure options to maintain a positive pressure in a reservoir.

Pressurisation options:

0.2, 0.35 and 0.7 bar crack pressure.

Pressurisation valve:

Nylon/Nitrile.

Dipstick:

Available for use with all options. Dipsticks are available in 2 lengths and in packs of 10.

Dipstick material:

ABS.

Hi/Lo indicators:

Acetal. Adjustable red/green level indicators.

Dipstick lengths:

200mm and 400mm.

Breather weight:

0.2Kg.

Anti-splash feature:

The unique design anti-splash feature is standard on option 1 and allows for a dipstick to be fitted if required.

Pressure Drop Flow Curve

AB98XXX Screw-on Non-Pressurised Pressure Drop Curves

Spin-On Air Breathers

Reservoir Equipment

High capacity air breathers

Ideal for high flow heavy contamination systems

Spin-on air filters for tank mounted breathing solutions offer high capacity, disposable air breathers to remove airborne contamination. 2 x 5 micron models are available – 700 l/min and 1500 l/min ideal for high flow heavy contamination systems.

Product Features:

- High capacity air breathers to remove airborne contamination.
- Disposable, 5 micron nominal quality elements.
- Models – 700, 1500, 1700 and 3000 l/min.
- Ideal for high flow heavy contamination systems.

Spin-On Air Breathers

Reservoir Equipment

Specification

- High capacity air breathers designed for the removal of airborne contamination in hydraulic systems to support environmental maintenance.
- Ideal for high flow systems and heavily contaminated environments.
- Disposable spin-on elements quickly and easily replaced.
- 5 micron nominal quality filtration elements.
- 2 models available – 700 l/min and 1500 l/min.
- Available with a pressurised valve in the mounting adaptor.

Standard spin-on air breather stem

Pressurised spin-on air breather stem

Note: Spin-on air breather elements can also be mounted directly on to any suitable length of 3/4" BSP threaded pipe.

Ordering Information

Note 1: Part numbers featured with bold highlighted codes will ensure a 'standard' product selection.

Note 2: Alternate displayed part number selection will require you to contact Parker Filtration for availability.

Note 3: Reservoir must be capable of withstanding pressurisation.

Mounting face for standard and large breather

- High capacity air breathers and filler/breathers designed for the removal of airborne contamination in hydraulic systems to support environmental maintenance.
- Ideal for high flow systems and heavily contaminated environments.
- Disposable spin-on elements quickly and easily replaced.
- 3 micron absolute quality filtration elements.
- Models available – 1700 l/min and 3000 l/min.

Specification

Maximum operating temperature:
-20°C to +90°C.

Construction materials:
Epoxy coated steel components to resist corrosion.
resistant paint finish on large breathers.

Fluid compatibility:
Suitable for use with mineral oils and water oil emulsions.

Weights:

Large: H00834001 1.0 Kg
H00834002 1.65 Kg
H00834003 1.90 Kg

Each breather filler is supplied with mounting gaskets and self-tapping screws.

Fluid Level Measurement

Fluid Level/Temperature Gauges

Reservoir Equipment

A proven solution for tank oil level measurement

Universal fixing designed for front or rear tank mounting

Fluid level/temperature gauges are available in 3 sizes each with 2-hole mounting at 76mm, 127mm and 254mm mounting centres. The high-visibility viewing lens is a one-piece design for added security, moulded in shatterproof, transparent polyamide.

Contact Information:

Parker Hannifin
Hydraulic Filter Division Europe

European Product Information Centre
Freephone: 00800 27 27 5374
(from AT, BE, CH, CZ, DE, EE, ES, FI, FR, IE, IT, PT, SE, SK, UK)
filtrationinfo@parker.com

www.parker.com/hfde

Product Features:

- 3 sizes of fluid level/temperature gauge. 2 hole mounting.
- 76mm, 127mm and 254mm mounting centres.
- A one-piece design, high-visibility viewing lens for added security.
- Moulded in shatterproof, transparent polyamide.

Specification

Construction:

Lens Transparent polyamide.
Lens base Nylon 66.
Shroud High impact polystyrene.
 No aluminium content.

Bolts:

Steel.

Seals:

Nitrile.

Maximum working pressure:

1 bar.

Working temperature:

-30°C to +90°C.

Fluid compatibility:

Mineral and petroleum based oils.

Note:

A 500mm model with metal shroud finished in black available.

Recommended bolt tightening torque:

10 Nm maximum.

Thermometer scale range:

+30°C to +90°C.

Temperature Indicator:

Blue alcohol.

Note:

1. Locate seals in mounting recess before fitting.
2. Select the size required by studying the installation details to determine a part number.

Size 1 Installation Details

For 'through hole' mounting:

Hole size	-Thread-	
	M10	M12
Preferred	11.0	13.0
Maximum	13.0	14.0
Torque = 10Nm max		

For tapped holes:

Holes to be tapped square to mounting face.
 Tolerance on hole centres: +0.5
 -0.2

For welded back nuts:

The above details should be combined.

Installation and Application Information

Simple to Install

The universal fixing is designed for either front or rear fixing. Just two holes in the tank – threaded for front fixing – and the gauge is ready to install. After positioning the gauge the bolts are simply tightened to provide a secure seal. There is no fear of leakage with the square section seals and the two-point mounting system eliminates problems with tank distortion. M10 and M12 bolt thread options are available.

Easy to Read

The high-visibility lens is one-piece for added security and moulded in shatterproof, transparent polyamide for an accurate and clear oil level and temperature indication. Further gauge protection is provided by a specially designed shroud moulded in high-impact, black polystyrene.

Reservoir Float & Level Switches

Reservoir Equipment

Cost effective reservoir solution

Float switches designed for on-site adjustment

A range of high quality, adjustable float switches. A reliable design using reed switches and available in 3 lengths – 500mm, 1000mm and 1500mm. additionally a capacitive level switch is available designed to detect the loss of fluid below its position in the tank.

Contact Information:

Parker Hannifin
Hydraulic Filter Division Europe

European Product Information Centre

(from AT, BE, CH, CZ, DE, EE, ES, FI, FR, IE, IT, PT, SE, SK, UK)
filtrationinfo@parker.com

www.parker.com/hfde

Product Features:

- Adjustable float switches – 3 lengths available.
- Capacitive level switch designed to give a low level alarm.
- High quality, adjustable float switches available in 3 lengths – 500mm, 1000mm and 1500mm.
- Capacitive level switch – rugged construction, simple to install and with no moving components.
- Cost effective reservoir solutions with many applications.

FL Series

Adjustable Float Switch Reservoir Equipment

Features & Benefits

The **FL Series** is a range of vertically mounted, single float level switches operating on the proven reed switch and magnet principle.

The **FL Series** float switch can be tailored by the user for a particular application, by adjusting the length of the float switch tube. It is also possible for the user to select the switching configuration by inverting the float, giving either open on rise or close on rise operation.

The unit is supplied part assembled, with detailed instructions for the user to complete assembly to the specifications of the application and to install the unit.

Float Switch Features Include:

- Float switches can be adjusted on site
- Reliable design using reed switches
- 3 lengths available, 500mm, 1000mm and 1500mm

The **FL Series** is designed to be adjusted by the user to fit their tank. The unit consists of a stem with the reed switch and float already set in position. The customer can cut the stem to fit their tank, and assemble it to the header. The unit is then ready to be fitted to the tank.

The unit has a factory set "Open On Rise" switching configuration, but this can be changed by reversing the float.

Note: FL Series switches supplied as loose parts so no IP class applies. If assembled correctly by the customer, the IP class is IP67.

Typical Specification

Installation

Mounting: 1" BSP threaded header
Gasket: 2.0mm thick sealing washer
Length: Adjustable up to 1500mm

Electrical specification

Supply voltage: 240 Vac maximum
300 Vdc maximum
Switching current: 0.5A

Material specification

Header: Brass Stem: Brass
Float: Polypropylene Gasket: Klingersil grade C4324
to BS7531 grade Y

Other parameters

Fluid types: Any liquids compatible with brass and polypropylene

CLS46

Capacitive Level Switch Reservoir Equipment

Features & Benefits

The **CLS46 Liquid Level Switch** is an active device which is designed to give an alarm signal if fluid falls below a preset level. It will only give an output signal after a few seconds of low level to eliminate false alarms due to turbulence. The fact that the **CLS46 Series** has no moving parts and incorporates a built in delay means that it is ideal in applications where mechanically operated switches mis-trigger due to vibration and fluid turbulence.

Features Include:

- Rugged construction
- Simple to install
- Delay circuitry prevents false alarms
- Purely electronic, no moving components
- Integrated test feature

The **CLS46 Capacitive Level Switch** is designed to detect the loss of fluid below its position in the tank.

The **CLS46 Series** has no moving parts and it is therefore suitable for all applications, particularly where space and access inside a vessel is at a minimum.

The **CLS46 Series** compliments the existing range of level measurement instrumentation supplied by Parker Hannifin.

Technical Specification

Dimensions: See drawing

Electrical rating:

Supply voltage: 7-40 Vdc Supply current: 3.0mA
Max. load current: 1.0A Alarm delay time: 10.0 seconds

Connections:

V+: Positive power supply
GND: Negative power supply or GND
Output: Transistor switched to GND on alarm
Test: Ground to operate
Body: Connected to ground

Fluid types:

Mineral oils, typically used in engines or hydraulic actuators compatible with brass, PTFE and NBR.

Construction:

Body: Brass Probe: PTFE
Terminals: SAE CA210 brass, tin plated
Seals: NBR
Connector: 30% glass filled nylon 6

Environmental ratings

Max. pressure: 5.0 bar (72 PSI)
Temp. ranges: Fluid: -40°C to +130°C
Ambient: -40°C to +100°C
Storage: -50°C to +140°C

Sealing: IP67

Vibration: 6g 10-50Hz (600-3000rpm)

Shock: 50g, 6.3mS

Weight: 53g

Suction Elements

Reservoir Equipment

Proven solutions for oil reservoir efficiency

A range of quality fluid power products for reservoir and system application

A high quality range of products designed to complete a reservoir installation including in-tank suction strainers and oil diffusers, metal and polyester in-line filters and drive couplings with nylon sleeve and sintered steel couplings. Inline check valves, single station gauge isolator valve and 63mm/100mm pressure gauges are also available.

Zintec end cap.
Polyurethane adhesives.

Mounting threads:

G^{3/4} up to G2.

Working Temperature:

-30°C to + 90°C

Flow range:

50 l/min up to 454 l/min (For 30cSt).

The effect of fitting a diffuser

Note: When installing a diffuser the plain area on the outside must be facing the pump inlet.

Note: For information relating to maximum differential pressure over the diffuser, consult Parker Filtration.

The benefits of specifying a Parker Filtration Diffuser

Installing a Parker Filtration Diffuser in a hydraulic reservoir is a simple operation that can make a big difference to system efficiency.

With its special concentric tubes designed with discharge holes 180° opposed fluid aeration, foaming and reservoir noise are reduced and pump life extended by reducing cavitation to the pump inlet.

Diffusers manufactured to customer specifications and other sizes of diffusers are available.

Drive Couplings

Reservoir Equipment

Technical Data

Materials

Coupling halves
Sintered Steel

Sleeve
Nylon 66

Max temp sleeve
83°C

To select coupling model check application to establish running load condition.

Check chart for factor (F) and apply factor (F) to *Rating of coupling formulae. This answer you now apply to *Rating/100 rev/min below.

It is advisable always to check shaft sizes being used on application and check with dimension 'H'.

Application	Factor (F)	
	Electric motor	Petrol/diesel engine
Uniform load	1.00	1.20
Medium shock	1.25	1.50
Heavy shock	1.75	2.00

$$\text{*Rating of coupling} = \frac{\text{HP of application} \times 100 \times F}{\text{rev/min of application}}$$

Assembly data

- Maximum angular misalignment is ±2°. Maximum radial misalignment is ±0.4mm.
- Ensure that the Parker Filtration drive coupling gear hubs are an easy fit to their respective shafts. Do not use heavy blows to force the hubs on.
- When in position, the hubs should have a gap of 4mm as denoted by 'E' dimension.
- Tighten grub screws to locate both gear hubs on to their respective shafts.

Ordering Examples

Parker Filtration drive coupling components are ordered separately. Here are three examples of complete assemblies ordered this way.

- Complete assembly – **DC28M14B04K**
Made up of a **DC28M14**
DC28B04K
DC28S (Sleeve)

Complete model **DC28** drive coupling: One gear hub has 14mm bore with 5mm wide keyway and other hub has a 1/2" bore with 0.125" wide keyway.

Both hubs supplied with locating grub screw.

- Complete assembly – **DCR42PBB**
Made up of 2x **DCR42PB's**
DC42S (Sleeve)

Complete model **DC42** drive coupling: Both gear hubs have pilot bore of 10.5mm. Not supplied with grub screws.

- Complete assembly – **DCR55PBB12K**
Made up of a **DCR55PB**
DC55B12K
DC55S (Sleeve)

Complete model **DC55** drive coupling: One gear hub pilot bored 5/8", the other hub pilot bored 1 1/2". Latter only supplied with grub screw.

Multiclamp

Pipe Clamp System

A 'fit for purpose' pipe clamping system

Leak free, noise free and vibration free pipe clamping

Multiclamp is a system of components, each one engineered to a high standard – that together build to provide effective, all-purpose pipe work clamping. Available as single clamp, double clamp, 12 or 16 hole Multiclamp, there is a complete range of split bushes to accept pipe or hose diameters from 6mm up to 50mm from 3 x Series of Multiclamp.

Product Features:

- High quality pipe clamping system in 3 ranges - Series 10, 16 or 32.
- Pipe or hose diameters from 6mm up to 50mm.
- 26 different diameter, high quality split rubber bushes.
- Zinc plated steel construction with anti-corrosive, full passivate.
- Stainless Steel clamp available.

When only the best Clamping System will do ...specify Multiclamp

Multiclamp is a system. A system of components, each one engineered to a high standard – that together build to provide effective, all-purpose pipework clamping. Multiclamp offers creative and cost-effective environmental benefits to the system designer and installer. Creating accurate runs of varying diameter tubes, pipes, hoses and cables in all industries.

Secure Multiclamp installations ensure a leak free, noise free and vibration free system.

The neat design of pipe line runs offers easy maintenance of machinery and plant equipment. Visual planning of line runs is straightforward with Multiclamp – accurate installations can be achieved without skilled labour – keeping costs down and quality up.

Planning with Multiclamp

These notes have been compiled to assist in planning your Multiclamp system.

Multiclamp offers considerable flexibility. For example, it can fit in with a factory installation that is being built in phases.

Should a last minute change in pipe diameter occur during installation, an alternative rubber bush is likely to be all that is required. Not a complete and expensive re-think of the installation.

Multiclamp metal components can be sprayed to match a vehicle livery or plant installation and, if installed properly, should require no maintenance.

Installation is simple and requires no experience

Anyone can use Multiclamp and only the basic, everyday tools are required.

From one pipe to almost any number – because each Multiclamp ‘position’ can be visually sighted and its position adjusted – an almost guaranteed straight run can be obtained. Equally, changes of plane or direction can be achieved simply and securely.

Group pipe sizes together to obtain the most economical use of three basic Multiclamp Series.

Some sites will require all pipes mounted in one single plane – either vertical or horizontal.

When stacked modules are preferred, the only work to be done on the Multiclamp is to saw off the desired length.

If a large number of pipe lines are to be run, it is recommended that the upper clamping unit is simply cut into two lines only, and progressively assembled by securing two pipes at a time. It will be recognised that most odd lengths on site will be used, and one man can easily cope with a large number of pipe lines by this simple progressive build up. This assembly will provide easy access for servicing and replacing pipes. This method also reduces the quantity of Stacking Nuts and Studs by 50%.

If a factory installation is being built in phases, it would be wise to leave the first phase with a lower clamping unit and Stacking Nuts in position ready to receive pipe runs for the next building phase.

Series 10
6.0mm-20.0mm
(1/4"-3/4")

Series 16
6.0mm-28.0mm
(1/4"-1")

Series 32
10.0mm-50.0mm
(3/8"-2")

Stacked modules or single module

Your maximum pipe size will determine the series to use. There is a degree of versatility provided by the rubber bushes. You choose from single or multistacked Multiclamp, whichever suits your particular installation requirements.

Multiclamp

Pipe Clamp System

Specification

Dimension details supplied in product configurator

Single Clamp

Double Clamp

Multiclamp – 12 or 16 holes

1 box of clamping units = 1 pair

Split Bushes

Split bushes are ordered in sets only
i.e. 1 box of bushes = 10 bushes of one size

Material Specifications

Zinc plated steel with anti-corrosive, full passivate. Multiclamp can also be multi-stacked using stacking studs and nuts. Series 10 and 16 clamp is supplied in lengths of 603mm and Series 32 in lengths of 1206mm. These can be simply cut to the required lengths for installation.

Note 1: For stainless steel version please consult Parker.
Note 2: Where appropriate a 'set' has been redefined as a 'box'.

Series 10 will accept pipe or hose diameters from 6mm up to 20mm maximum. Series 16 from 6mm up to 28mm and Series 32 from 10mm up to 50mm. Across the 3 Series, there are 26 different high-quality split rubber bushes to select from to cope with any combination and number of different pipe and hose diameters in the same run.

Stacking Nuts

Stacking nuts are ordered in multiples of 50 stacking nuts of one size only.

Stacking Studs

Stacking studs are ordered in multiples of 50 stacking studs of one size only.

Mounting Adaptors

Mounting adaptors are not ordered in multiples. i.e. 1 off mounting adaptors = 1 single piece.

Weld Plate

Weld plates are ordered in multiples of 10 weld plates only.

How to 'build' Multiclamp

Inline Check Valves

Reservoir Equipment

Specification

Construction:
Steel UNI 5105.

Ball and spring:
Chrome finished steel.

Retainer:
Nylon.

Flow rates:
From 20 l/min to 150 l/min.

Max. working pressure:
350 bar.

Valve crack pressures:
0.35 and 4.5 bar.

Max. operating temp:
120°C.

63mm Dia. Pressure Gauges

Reservoir Equipment

Specification

Construction:

Case: Natural finish stainless steel.
 Window: Non-splintering clear acrylic glass.
 Movement: Cu alloy.
 Dial: White plastic, with pointer stop pin.
 Pointer: Black plastic.

Liquid filling:

Glycerine 99.7%.

Working pressure:

Max 75% of the full scale value.

Process temperature range:

0°C to 60°C maximum.

Accuracy:

1.6% FSD.

Wetted parts connector:

Copper alloy.

Bourdon tube:

< 60 bar = Cu alloy, C-type, soft soldered.

> 60 bar = Cu alloy, helical type, soft soldered.

IP Class:

IP65.

Mounting Stem Detail

Note: It is recommended that all glycerine gauges should be mounted in the vertical position with gauge case relief valve uppermost. Pressure range up to 1000 bar available.

100mm Dia. Pressure Gauges

Reservoir Equipment

Specification

Construction:

Case: BS 304 S15 stainless steel.
 Window: Acrylic.
 Movement: Brass.
 Dial: White aluminium.
 Pointer: Black aluminium.

Liquid filling:
 Glycerine 98%.

Working pressure:
 Full scale value.

Process temperature range:
 -20°C to +60°C maximum.

Accuracy:
 1.0% FSD.

Wetted parts connector:
 Copper alloy.

Bourdon tube:
 < 100 bar = Cu alloy, c-type, soft soldered.
 > 100 bar = stainless steel 1.4571, helical type, brazed.

IP Class:
 IP65.

Mounting Stem Detail

Note: It is recommended that all glycerine gauges should be mounted in the vertical position with gauge case relief valve uppermost.

icountLaserCM20

Fluid Condition Monitoring

Portable Particle Counter

A 2-minute contamination test procedure:

A portable particle counter designed to be used in the field

icountLCM20 is a proven answer to fluid system contamination monitoring offering a 2-minute test procedure. Multi-standard ISO and NAS cleanliness reporting, data entry, data graphing and integral printing are all standard on this world proven contamination monitor.

Contact Information:

Product Features:

- icountLCM20 is a proven answer to fluid system contamination monitoring.
- 2-minute test procedure.
- Multi-standard ISO, NAS and AS4059 cleanliness reporting.
- Data entry, data graphing and integral printer.
- 420 bar rated maximum pressure.
- Supported by the offline UBS and online SPS accessories.

icountLaserCM20

Portable Particle Counter

Features & Benefits

Test time:	2 minutes
Particle counts:	MTD 4+, 6+, 14+, 21+, 38+ and 70+ microns(c) ACFTD 2+, 5+, 15+, 25+, 50+ and 100+ microns
International codes:	ISO 7-22, NAS 0-12
Data retrieval:	Memory access gives test search facility
Max. working pressure:	420 bar
Max. flow rate:	400 l/min when used with system 20 Sensors. Higher with single point sampler (see page 404)
Working conditions:	LaserCM will operate with the system working normally
Computer compatibility:	Interface via RS232 connection @ 9600 baud rate.

- Special 'diagnostics' are incorporated into the icountLaserCM microprocessor control to ensure effective testing.
- Routine contamination monitoring of oil systems with icountLaserCM saves time and saves money.
- Contamination monitoring is now possible during application operation - icountLaserCM saves on production downtime.

- Data entry allows individual equipment test log details to be recorded.
- Data retrieval of test results from memory via hand set display.
- Automatic test cycle logging of up to 300 tests can be selected via hand set display.
- Totally portable, can be used as easily in the field as in the laboratory.
- Automatic calibration reminder.
- Instant, accurate results achieved with a 2 minute test cycle.
- Data entry allows individual equipment footprint record.
- Data graphing selectable via the integral printer.
- Auto 300-test cycle logging via LCD handset input.
- RS232 to USB computer interface.
- Limit level output to control peripheral equipment such as off-line filtration via internal relay limit switches.
- Auto-testing allows for the conducting of automatic sequencing tests on flushing systems for example.
- Optional bar code swipe wand to allow handset data loading.
- Worldwide service and technical support.
- Re-calibration - Annual certification by an approved Parker Service Centre.

Typical Applications

- Construction machinery
- Industrial plant
- Hydraulic equipment & system manufacturers
- Research & testing institutes
- Offshore & power generation
- Marine
- Military equipment applications

Parker LaserCM Portable Particle Counter.

With 20 years experience in manufacturing the world's best selling 'white light' portable particle counter – CM20, the progression to the icountLaserCM with its opto-mechanical, continuous wave single point source laser (SPSL) is both a natural and customer driven development.

Specification

Automatic Particle Counters (APC's), have been widely used for many years in condition monitoring of hydraulic fluids. However, it is only recently that APC's have become flexible enough to enable the instruments to be taken out of the laboratory and used on-line in order to obtain the most credible form of results.

Unusually, the move from fixed laboratory use, to portable field use has not been at the expense of accuracy or user flexibility, but has actually enabled the instruments to be used over a wider range of applications and situations.

The most common monitoring technique used in APC's is that of light obscuration or light blockage. Here, a focused light source is projected through a moving column of oil, (in which the contaminants being measured are contained), causing an image of the contaminant to be projected on to a photo diode cell, (changing light intensity to an electrical output).

The electrical output of the photo diode cell will vary in accordance with the size of the particles contained in the column of oil; the larger the particle, the bigger the change in the photo diode electrical output.

On-line APC's must be able to test the oil sample at whatever cleanliness it is delivered to the machine. Parker therefore had to develop technology to ensure the on-line APC was able to test a sample without the conventional laboratory technique which requires dilution - a practice that would have been simply impossible with a portable unit.

By careful design and window sizing, gravimetric levels as high as 310mg of dirt per litre, (equivalent to up to 4 million particles >6 micron per 100 ml), can be achieved without making the instrument susceptible to counter saturation.

These high saturation point on-line APC's, whilst losing none of the accuracy of their laboratory counterparts, enable particle counting to be carried out quickly and accurately.

A focused light source is projected through a moving column of oil.

Laser Optical Sensing

Core technology that proves itself in icountLaserCM

The icountLaserCM portable particle counter features microprocessor controlled optical scanning for accurate contaminant measurement with a calibration range from ISO 7 to ISO 22 with no counter saturation.

How does icountLaserCM work?

- The particles are measured by a photo diode that converts light intensity to a voltage output which is recorded against time.
- As the particle moves across the window the amount of light lost is proportional to the size of the particle. This reduction in voltage is measured and recorded.
- This "voltage" lost relates directly to the area of the particle measured, is changed into a "positive" voltage and then in turn changed into a capacitance value.
- This value is counted and stored in the icountLaserCM computer in one of 6 channels according to particle size.
- Readouts are displayed on the hand-held LCD in the accepted ISO and NAS standards ready for hard copy printing or RS232 computer download.
- The on-board computer allows storage of up to 300 test results.

Unit weight – (Kg)	8	8
ParSmart software and cable link pack	•	•
Weather protector cover	•	•
CE certified	•	•
Auto logging	•	•

*Note: In compliance with international standards, all Parker portable particle counters can meet the ISO Medium test dust standards. The icountLaserCM's, in addition to the complete range of Condition Monitoring products, are capable of achieving certification to ISO 4406:1999 and with traceability to ISO 11171 for SRM 2806, via ISO 11943.

Commissioning Kit

Operation

Switch On

Operating the Parker icountLaserCM is as simple as pressing the start button and turning the dial. The test procedure is automatic and in the case of the icountLaserCM takes no more than 2 minutes to complete.

icountLCM20 makes the difference in industry

Fully accredited to BS EN 60825:1992 and IEC 60825-1 (safety of laser products) Standards, accredited to USA Standards and achieving full ISO certification. icountLaserCM offers users advanced laser technology, a fast, dynamic and on-line 2 minute system test cycle. An icountLaserCM Aggressive Fluids model is also available, suitable for monitoring corrosive fluids such as phosphate ester based lubricants used in commercial aviation.

MTD calibration

icountLaserCM MTD Calibration variants are certified via a primary ISO 11171 calibrated automatic particle counter. All MTD Laser CM20's achieve ISO 4406:1999 criteria, via ISO 11943.

icountLCM20 Using SPS

Start Test

Understanding MTD

ACFTD (Air Cleaner Fine Test Dust) was formatted in the 1960's, but is no longer being produced. The obsolescence of this dust has led to the adoption of a new dust MTD.

MTD (Medium Test Dust) having a particle size distribution close to ACFTD was selected as a replacement. However, MTD produced results somewhat different to ACFTD, so the NIST (National Institute of Standards & Technology) undertook a project to certify the particle size distribution of ISO MTD.

The result was particle sizes below 10µm were greater than previously measured.

Particles sizes reported based on NIST would be represented as µm (c), with "c" referring to "certified". Therefore the icountLCM20 reported sizes are as follows:

ACFTD	MTD
2µ	4µ (c)
5µ	6µ (c)
15µ	14µ (c)
25µ	21µ (c)
50µ	38µ (c)
100µ	70µ (c)

MTD offers true traceability, improved particle size accuracy and better batch to batch reproduction.

icountLaserCM20

Portable Particle Counter

Why On-Site Fluid Contamination Monitoring?

- Certification of fluid cleanliness levels.
- Early warning instrument to help prevent catastrophic failure in critical systems.
- Immediate results with laboratory accuracy.
- To comply with customer cleanliness requirements and specifications.
- New equipment warranty compliance.
- New oil cleanliness testing.

Data Download Management

Dedicated software, provides the link between an icountLaserCM20 and the H₂Oil - Water in Oil monitor and your computer management system.

16-column printer for hard copy data. A feature of the icountLaserCM is the on-board printout data graphing option developed to support predictive maintenance procedures.

Introducing the new icountLCM ‘Classic’

There is a new addition to the proven range – the icountLCM ‘Classic’. Only available from Parker, the ‘Classic’ retains all the technology that made the icountLaserCM one of the most accurate, reliable and popular portable particle counters available.

Our design engineers have re-configured the icountLaserCM specification in a way that has reduced our manufacturing costs. These savings have been passed onto icountLCM ‘Classic’ customers.

How have we done this?

Parker listened to our existing customers and then to the engineers and maintenance operatives to find out the features that make the icountLaserCM a unique predictive maintenance instrument.

Then, we removed peripheral items such as the aluminium case and all the accessories, so a customer receives the icountLCM, with a CD user guide, professionally and securely boxed. One thing that has not altered is the icountLCM accuracy and icountLCM reliability. Our in-house software engineers have re-configured the EPROM, removing Data programming, User ID, Automatic Testing, Data retrieval, Alarm level settings, the barcode pen and Graph printing functions to reduce costs still further without in any way reducing the efficiency of the icountLCM. The icountLCM ‘Classic’ remains an instrument to be proud of.

Universal Bottle Sampler

Simple and efficient offline oil sampling

Clean and contamination free sampling

Ideal for batch oil sampling and laboratory testing

The UBS provides the dynamic link to portable particle and water counters. The UBS off-line sampler has microprocessor technology to recognise and adjust to the connecting monitor including the icountLCM20 and H₂Oil water in oil monitor.

Installation Details

Universal Bottle Sampler

Simple and efficient offline oil sampling

System Flow Rate

Samples are best taken from a point in the system where the flow is TURBULENT (Reynolds No. greater than 4000). The turbulent flow creates a mixing action. Where flow is streamline or LAMINAR, larger particulate may tend to settle toward the lower pipe surface and not be sampled.

System Condition Changes

Changes in the system operating condition, flow, temperature, pressure or vibration, can result in previously sedimented contaminant being retrained into the flowing oil. It is also possible that these changes may cause partially contaminated filter elements to shed particulate into the system. Samples should, therefore, be extracted when the system is in a steady state condition and the result less likely to be distorted by contaminant peaks.

There are a number of proprietary sampling valves available which adhere to good theoretical principles. However, they do tend to generate a level of precision and cost which is unnecessary for trend monitoring.

Sampling points should enable extraction of a sample without changing the system's condition. Fine control needle valves are not desirable, as they have a tendency to silt up under some operating conditions, causing the distribution of contaminants in the fluid to be changed. The sampling port should be protected to maintain cleanliness and thoroughly flushed before collecting the sample for analysis. Allow sufficient airspace in the bottle to enable 80% fill.

ACC6NW001 x 50 = ACC6NW002

ACC6NK001

Bottle Cleanliness

It is preferable that bottles have sealing screw caps and both parts are cleaned to a suitable level in accordance with ISO3722.

The bottle should not contain more than one tenth the number of particles per 100ml than are expected to be monitored. Standard Parker bottles are supplied clean to ISO13/11 (NAS Class 4) and should not be used to accurately count oils cleaner than ISO 15/12 (NAS Class 6) although they may be used for "trend monitoring" at lower levels.

The bottle should remain capped until time of sample filling and re-capped immediately afterwards.

Sample Mixing

Sedimentation of contaminant in a sample will occur, the rate of which is dependent upon both fluid and particle characteristics.

Samples should be analysed, without delay, once agitated and de-glassed.

Typical Applications

- Batch sampling
- Aircraft rig certification
- Oil research
- Laboratory testing
- Transfer line monitoring

Simple To Use UBS

The oil sample is drawn into the UBS Off-line where it is secured, free from further contamination, in a bottle together with a clean waste bottle by a peristaltic, self-priming pump. Simple operation and efficient testing are assured once the UBS Off-line is connected to any of the CM monitors, and powered up using its own power source. The oil sample requires agitation and de-gassing before carrying out the contamination test. A de-gassing kit option is available and consists of a vacuum chamber and pump. (Standard with UBS9002)

icountBSplus

Bottle Sampler

In the lab or in the field monitoring

Parker Filtration's CE compliant icountBSplus is a unique and complete solution providing customers with laboratory fluid bottle sampling using proven on-board, laser based technology. icountBSplus is a next generation product from Parker's fluid particle analysis and monitoring programme and provides an effective alternative to external laboratory services.

- Quick sample bottle analysis with variable test time options from 15 seconds and volume capacities from 25ml.
- Repeatable and re-producible result performance to ISO4406:1999, NAS1638 AS4509E and GOST 17216:2001 (Differential and Cumulative) particle count distributions.
- On-board compressor and 'shop' air capability.
- Environmentally controlled front-loading bottle chamber.
- Selectable 12-language instruction manual menu.
- Analysis of fluid moisture and temperature capability.
- icounBSplus has the capability for on-line fluid measurement configuration as well as off-line fluid sampling.
- Design concept allowing for portability. DC and rechargeable battery pack power option built in.
- CE compliant
- Fluid resistant touch type screen panel.
- On-board thermal printer.
- 500 test memory (fully downloadable).

icount Bottle Sampler: Advanced contamination testing

The revolutionary icountBSplus is an advanced, fully contained bottle sampling system that ensures fast, accurate and repeatable detection of contamination in hydraulic oils and hydrocarbon fuels.

Compact and portable, the icountBSplus is ideal for use in the laboratory and in on-line and off-line applications.

The system is fully accredited to all particle counting standards - ISO, NAS, AS and GOST - including the latest ISO medium dust certification and is backed by Parker Hannifin's global customer support network.

The icountBSplus uses proven laser particle detection technology, with intuitive touch screen control, integrated long life rechargeable battery and a

robust easy to clean enclosure, to deliver exceptional product quality and performance.

The icountBSplus is quick to setup and use, delivers rapid test results and offers a wide range of features to help you improve the reliability, productivity and profitability of your production equipment.

The icountBSplus features a backlit 256 colour, high resolution touch screen and uses Windows® CE based menus.

Wherever, whenever you need to be 100% sure of oil and fuel quality

The icountBSplus has been developed using the latest industrial design and manufacturing techniques, creating a system that integrates state of the art

technology with dependable and precise measurement and analysis processes. Built by engineers, for engineers, the icountBSplus gives you a valuable and

extremely effective tool for use in many different applications.

Agriculture: Designed for a wide range of agricultural machinery monitoring and testing procedures to ensure reduced downtime.

Defence: Designed for use in defence airfield fuel supply and storage points, military laboratories and equipment maintenance zones.

Aerospace: Monitoring of hydraulic ground support equipment, airframe laboratories and aerospace testing facilities.

Oil and Gas: Ideal for use in fuel refineries (DEF STAN 9191), fuel farm storage, fuel laboratories and airport fuel transfer.

Construction: Ideal for use in construction machinery development and test laboratories

Marine: Suitable for shipyard and dockyard diagnostic centres and marine service environments.

Power Generation: Suitable for monitoring hydraulic gearbox (wind energy pitch and braking systems) quality as part of a planned maintenance programme.

Industrial: Test rigs, hydraulic benches and hydraulic controlled production lines, as well as hydraulic system test laboratories, all benefit from the IBSplus.

How the icountBSplus works

Our design, manufacturing and applications engineers have over 20 years experience working with advanced contamination and particle detection technologies. As a result, the latest version of the icountBSplus has been developed to meet the needs of customers throughout industry, both today and in the future.

Precision and repeatability

This eliminates many of the variables associated with traditional methods of contamination monitoring. Control and accuracy is further enhanced with an easy to use interactive touch screen display.

The backlit 256 colour high resolution screen uses intuitive Windows® CE based menus for quick and simple stylus operation, with the stylus being stored neatly in the base of the icountBSplus.

The icountBSplus is capable of entrapped gas suppression and automatically ensures that each oil sample is carefully regulated prior to test.

Every sample is degassed using suppressed, cleaned air and then delivered to the measurement cell through a fixed displacement pumping system.

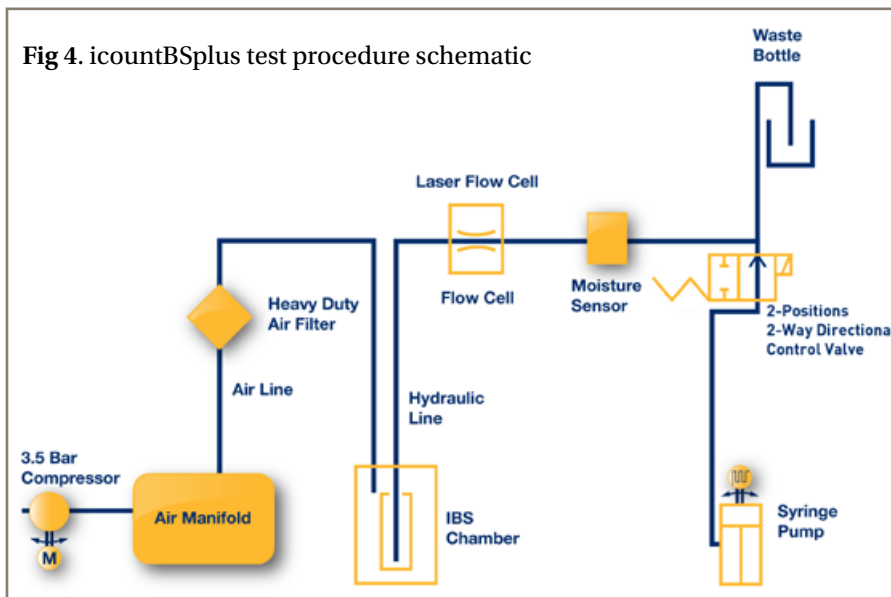

Fig 4. icountBSplus test procedure schematic

Laser power

At the heart of the system is a sophisticated laser detector, using a light obscuration flow cell, providing continuous measurement of fluid flow passing through a sample tube.

Fig 1. A controlled column of contaminated fluid enters the laser optical scanning chamber, which is designed to ensure balanced flow and fluid distribution for consistent results.

Fig 2. The laser is projected through the oil column onto a highly sensitive photo diode cell.

Fig 3. The shadow cast on the photo diode by contaminants in the oil creates a measurable change in the light intensity.

Tough and reliable

The icountBSplus is built to ensure a long and trouble free operating life. Its robust moulded enclosure will withstand constant use and is easy to clean.

Fig 4. The IBSplus oil sampling probe automatically lowers into the bottle once the test begins.

For optimum operational flexibility the icountBSplus can be powered either via an internal rechargeable lithium ion battery, or direct from a mains supply.

Internally, a high filtration air line filter removes impurities from air supply, while vane-type deflectors and drain valves improve efficiency still further.

Fig 5. IBSplus' high filtration air filter.

The integrated 12VDC compressor pressurises the sampling and measurement chambers quickly, with a compact syringe pump providing consistent oil or fuel samples.

Fig 6. IBSplus' integrated 12VDC compressor.

Benefits

- Low cost solution for monitoring fluid life and reducing machine downtime
- Easy to set up and use this CE compliant instrument
- Selectable 12 language instruction manual menu
- Optional on-line fluid measurement capability
- Independent monitoring of contamination
- Calibration to ISO procedures
- Selectable number of samples taken in one time: 1, 2, 3, 4 or 5 tests
- Mineral fluid/fuel compatible construction
- Percentage saturation reporting (for the moisture sensor option)
- Testing capability of up to 500 continuous tests (override auto warning option available)

Contamination Standards Table

MTD	ACFTD
ISO 4406 : 1999	ISO 4406 : 1987
NAS 1638	ISO 4406 : 1991
AS4059E (Differential)	NAS 1638
AS4059E (Cumulative)	AS4059E (Differential)
Jet Fuel (contact Parker)	AS4059E (Cumulative)
	GOST 17216 : 2001

- 8 fixed channel size analysis
- Integrated relative humidity moisture sensor
- Selectable test sample sizes: 25, 50, 75 and 100ml
- Selectable flush sample sizes: 10, 15, 20, 25, 50, 75 and 100ml
- Data exporting method to USB (in XML format)
- Modular design for easy servicing
- On-board high quality pump and motor configuration
- High resolution colour touch-screen panel and the IBSplus comes complete with its own stylus
- Integrated printer (selectable on/off feature)
- Self-diagnostic software
- Power-saving sleep mode with integrated wake up/power button
- On- and off-line pressure capability: see Ordering Information for options
- Integration package into the Parker MiniLab Environment: see Ordering Information for options

Features that boost your productivity

1 Wake up switch
Power button wake up switch: momentary LED illuminated switch, battery charger indicator.

2 Printer access
Internal thermal printer which uses a thermal printer paper reel.

3 Stylus holder
Plastic stylus in holder.

4 Pressure chamber
Front door with polycarbonate window.

5 High resolution touch screen
Intuitive touch screen display backlight 256 colour STN transmissive resolution – 302x3 (R.G.B) (H) X 240 (W) dots with active display area 115 (H) X 86 (W) mm. IBSPplus operates on Windows® CE system.

6 Power supply
Long life regulated 12 VDC power supply, with an M12, 4 pin connector, plus a rechargeable Lithium ion battery unit for use onsite or in remote locations.

7 Body panels
Body panels are made of resin composite.

Control Panel

KEY

- ① Emergency air release
- ② 4mm vapour release port
- ③ 6mm oil drain port
- ④ External air supply
- ⑤ External on-line oil supply (if fitted)
- ⑥ Long life Lithium Ion battery
- ⑦ USB connections A and B
- ⑧ Mains on/off and power socket
- ⑨ Ventilation fan (DO NOT BLOCK)

Product Specification

Dimensions are given in mm (inches)

Sample handling and preparation

Bottle cleanliness

Bottles should have sealing screw caps, with both parts cleaned to a suitable level in accordance with ISO3722. Standard Parker Hannifin bottles (supplied in pairs as part number ACC6NW001) are supplied clean to ISO 13/11 or better in a Class 10,000 Clean Room. The bottle should remain capped until the time of sample filling and be re-capped immediately afterwards.

Sample mixing

Sedimentation of contaminant in a sample will occur, the rate of which is dependent upon both the fluid and particle characteristics.

Other methods of sample agitation have not been provided, as they are likely inconsistently to distort the analysis of results. Where facilities are available, mixing can be achieved using 'paint shakers' and/or an ultrasonic bath. Take care when using ultrasonic baths to avoid distortion of the result by prolonged use, which could cause the breakdown of contaminants.

Bottle samples can be sufficiently stirred by swirling and tumbling by hand, end-over-end. Samples should be analysed, without delay, once agitated.

Results

The first result from a bottle sample should be disregarded, as it could be distorted by fluid from a previous sample. Samples from different parts of a system will give different results.

Consideration should be given to what monitoring is desired and where to extract samples from for suitable trend monitoring to be performed.

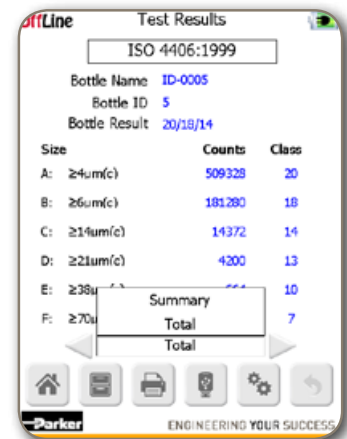

It is important that whatever practices you adopt, you must perform them consistently.

CMC Service Centres: Global Support for CMC products

Parker's fluid Condition Monitoring Service Centres can be found in ten locations around the globe, on almost every continent. Our experience and expertise in fluid condition monitoring and analysis ensure we are the authority within our industry.

Each location offers first class aftermarket support for condition monitoring products giving:

- Direct contact for end users.
- Quick and confident technical support to help you maintain an efficient and trouble free monitoring process.
- Faster turn around for annual calibration verification, eliminating the need for product to be returned to the country of manufacture.

Important Information

WARNING-USER RESPONSIBILITY

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

- This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise.
- The user, through their own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety and warning requirements of the applications are met.
- The user must analyse all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalogue and in any other materials provided from Parker or its subsidiaries or authorised distributors.
- To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems. The operation of the products described here in is subject to the operating and safety procedures details of which are available upon request.

Sales conditions

The items described in this document are available for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. Any sale contract entered into by Parker will be governed by the provisions stated in Parker's standard terms and conditions of sale (copy available upon request).

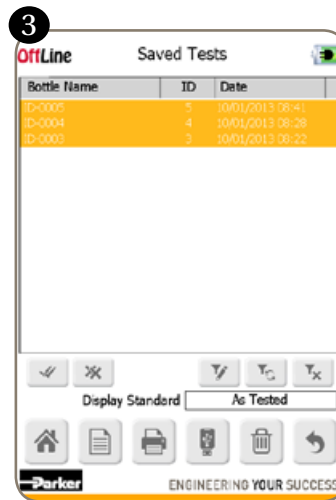

Viewing/Exporting test results

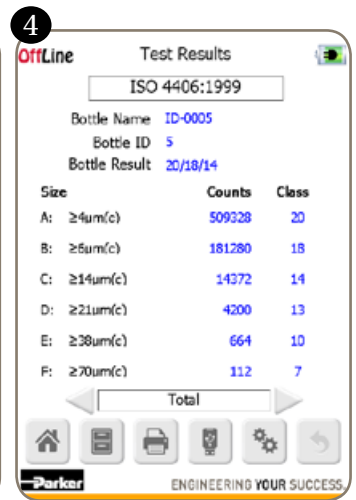

Select **Browse Tests** from the main **Test Set-up** screen.

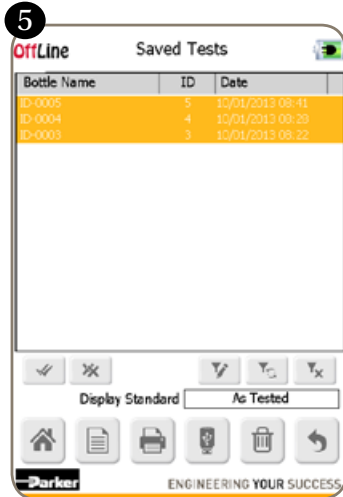

List of **Saved Tests** is shown.

Select individual results and show date. You can double-click the test name to view that test result.

Click **Browse Tests** to view more test results.

Export results: Highlight the test result(s) you would like to export using the stylus.

Plug in USB in the back of the icountBSplus.

Press **Export**. The **Export Complete** message confirms a successful export.

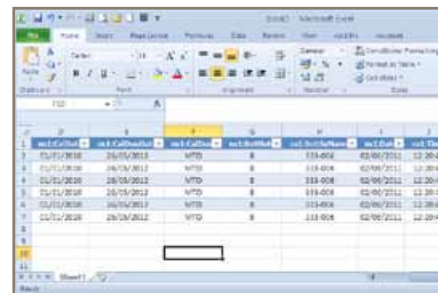

Test results (Importing data)

You can import the test results from the bottle sampler into a spreadsheet.

Please Note: The example shown is for Microsoft Excel®. Other spreadsheet software is available. Please contact Parker Hannifin for advice.

Plug USB drive from IBSplus into your PC.

Open your PC spreadsheet programme (for example Microsoft Excel®).

Ordering Information

The icountBSplus is supplied with the following components:

- 250ml Bottle Kit (x2)
- Vapour/Waste Bottle (1000ml)
- 4mm and 6mm Blanking Plug
- CD manual
- UK, US and EUR Power Leads
- Spare Printer Roll
- Stylus Pen
- Battery with battery compartment panel
- Drip Tray

Introducing the icount 'Mini-lab' – The effective way of utilising your icountBSplus

How clean is your hydraulic system?

Contamination Control is only an oil sample away with our easy, 3-Step fluid analysis service.

Step 1

Obtain your sample of hydraulic oil.

Step 2

Take the 2 minute off-line oil sample test.

Step 3

View your results and run a report immediately.

Kit comprises: icountBSplus. Flat-pack trolley. 30 sample bottles. Optional Laptop/software/printer and cables

CMC Service Centres

Global Support for CMC products

Improving aftermarket support for condition monitoring products.

Parker's fluid Condition Monitoring Service Centres can be found currently in 12 locations around the globe, on almost every continent. Our experience and expertise in fluid condition monitoring and analysis ensure we are THE authority within our industry.

Each location offers first class aftermarket support for Condition Monitoring products, giving:

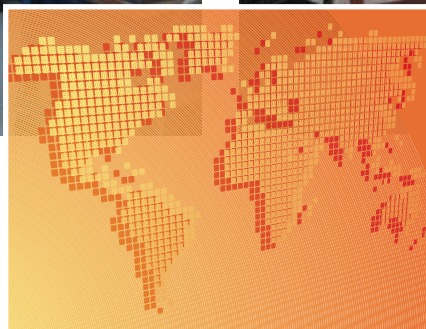

- Direct Contact for End Users.
- Quick and confident technical support to assist you in maintaining an efficient and trouble free monitoring process.

- Faster turn around for annual calibration verification, resulting in the product not having to come back to the country of manufacture.

Parker also offers on the icountACM20 laboratory unit:

- A six monthly field use verification sample for confident product performance.
- An extended two year warranty, giving confidence in product readiness.

Visit www.parkerhfde.com/condition/service/ to find your nearest location and contact details.

Parker returns policy and calibration procedure

Each product returned to an approved Parker Service Centre will have the following:

- **A visual inspection of all case components.**

If any components from the support case require replacing, please notify the Service Centre at the time of return.

Parker holds no responsibility for case contents and will only replace parts if required or deemed necessary.

- **An external inspection of the complete assembly.**

The particle counter will be thoroughly checked for signs of damage or misuse and if necessary an estimate of the cost of repair will be provided.

- **Full functionality test.**

This includes visual inspection of internal parts and their operation.

- **Replacement of any defective or damaged parts.**

No corrective work will be carried out on the product returned without the authorization from the end user.

- **Recalibration (with a Certificate valid for 12 months).**

Each unit is calibrated to the relevant ISO standards.

The recalibration procedure does not include the replacement of any damaged components that have been deemed defective through negligence or misuse.

Single Point Sampler

Online Sampling

Lightweight and compact connection

The effective link to ensure accurate contamination monitoring

The SPS (Single Point Sampler) is a lightweight, compact and easy to use online sampling unit that connects an icountLCM20 or H₂Oil to a single pressure test point in a fluid system. Suitable for use with mineral and biodegradable oils, petroleum based and phosphate ester fluids, the SPS offers fingertip operated control even at high pressures - 420 bar (6000 PSI) rated maximum pressure.

mineral based fluids

aggressive/phosphate Ester fluids

Product Features:

- Lightweight, compact and easy to use online sampling unit.
- Connects an icountLCM20 or H₂Oil to a single pressure test point in a fluid system.
- Suitable for use with mineral and biodegradable oils, petroleum based and phosphate ester fluids.
- 420 bar (6000 PSI) rated maximum pressure

Single Point Sampler

Online Sampling

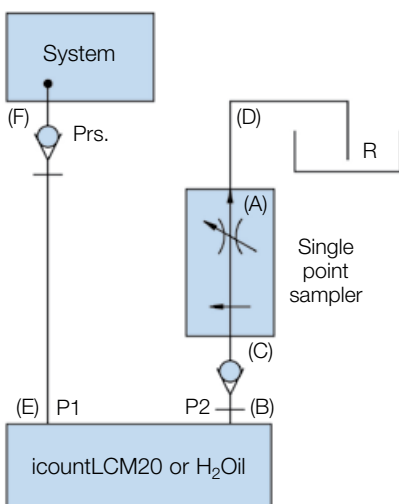

Features & Benefits

The Single Point Sampler provides a means to connect an icountLCM20 or H₂Oil to a single pressure test point and balance the differential pressure across the system, to provide a controlled flow of oil into the icountLCM20 or H₂Oil and away into a waste oil receptacle.

- Lightweight, compact and easy to use design
- Fingertip operated control valve even at high pressures
- 420 bar (6,000PSI) rated
- Facilitates testing from large diameter pipework
- Capability to test up to 500cSt viscosity oils (pressure permitting)
- Pressure compensated flow control mechanism
- Possible to control the valve with the same level of accuracy whether the device is operating at high or low pressure
- Capable of allowing a flow rate in excess of 10ml/min when operating at any viscosity within the product specification
- Suitable for fluid temperatures from +5°C to +80°C (+41°F to +176°F)
- High quality polished finish. (stainless steel/ aircraft grade aluminium)
- Capable of working with an icountLCM20 or H₂Oil connected into a system via the standard one metre extension hose kit
- Suitable for use with mineral and biodegradable oils, petroleum based and phosphate ester fluids
- Phosphate ester version utilises the 5/8" BSF HSP style fitting
- Designed so that it meets the lowest possible level of magnetic permeability
- Supplied with accessories kit
- It will maintain the set flow rate between upper and lower limits within a 100 bar inline pressure change
- Clear product identification to ensure that it is connected correctly. (i.e. downstream of the icountLCM20 or H₂Oil)

Connection Instructions

1. Ensure valve is closed (A).
2. Connect P2 on icountLCM20 or H₂Oil (B) to P2 on Single Point Sampler (SPS) (C).
3. Connect drain line on SPS (D).
4. Connect P1 of icountLCM20 or H₂Oil (E) to the system (F).
5. The SPS is ready to operate.
6. Open valve (A) slowly until the oil flows continuously from the drainline (D) into a reservoir or receptacle (R).
7. Switch on monitor and begin testing.

icountLCM20 Only

Carry out flow test as shown in the manual. If test is showing below Δt 3.6°C then carry out test as normal. If, however, test is above Δt 3.6°C then increase oil flow by turning valve (A) anticlockwise and then carry out flow test. Do this until Δt is below 3.6°C and carry out test as normal once achieved.

WARNING! Ensure that SPS valve is closed and icountLCM20 or H₂Oil is connected to the SPS BEFORE connection to system.

Specification

Fluid compatibility:

Mineral oil and petroleum based fluids (standard version).
Aggressive fluid (dual seal version) for other fluids consult Parker Hannifin.

Seals:

Fluorocarbon or Perfluoroelastomer.

Maximum working pressure:

420 bar (6000 psi).

Weight:

500 grams max. (Not including hoses).

Packaging standard:

Cardboard carton (military usage - plastic carry case).

Unit size:

45mm dia x 123mm long. (1.77in dia x 4.8in long).

System connection:

Standard - M16 (G¹/₄" BSP) with cap,
Aggressive - 5/8" BSF HSP.

Operating temp range:

+5°C to +80°C (+41°F to +176°F).

Storage temperature range:

-26°C to +80°C (-15°F to +176°F).

Construction:

Body: Aluminium BS 1470 – pressurised end stainless steel.

Finish: Anodised blue (standard version) - Mineral Oil.

Anodised red (dual seal version) - Aggressive Oil.

Note 2: Alternate displayed part number selection will require you to contact Parker Filtration for availability.

System20

Inline Sensors & Monitors

A proven method of accurate condition monitoring of a system

Effective inline sensors and monitors for fluid condition monitoring

Inline System20 sensors and hand-held monitors designed to give accurate and instant fluid system readings of flow, pressure and temperature. 3 sizes of inline System20 sensor for pressures up to 420 bar, an analogue monitor that utilizes 3 day-glow gauges with protective cover. EM20 electronic monitor with full digital display and 300 test memory.

filtrationinfo@parker.com

www.parker.com/hfde

Product Features:

- 2 types of System20 sensor are available. STI=industrial with reverse flow capability. STS=Mobile without reverse flow capability.
- 3 sizes of industrial inline System20 sensor for pressures up to 420 bar. 2 sizes of Mobile System20 sensor.
- Analogue monitor utilizes 3 day-glow gauges with protective cover.
- EM20 electronic monitor with full digital display and 300 test memory.
- For use with all mineral oils, water and oil/water emulsions.

System20

Inline Sensors & Monitors

Features & Benefits

Covering a wide range of flow rates, fluid types and applications, Parker's System 20 sensors are designed to be used with System 20 electronic or analogue monitors, icountLCM, icountPD and the H₂Oil. Specially developed System20 sensors are available for use with aggressive fluids. (EPDM Seals)

- System20 monitors, combined with the inline sensor, give the user accurate and instant readings of flow, pressure and temperature without the need for costly system downtime.
- For use with all mineral oils, water and water/oil emulsions.

Analogue Monitor

- Utilises 3 Day-Glo dial gauges with a protective hinged cover.
- Calibrated up to 380 l/min with dual scale bar/PSI & °C/°F. (USGPM also available)

EM20 Electronic Monitor

- Gives a full digital display.
- Automatically calibrated for all 3 sizes of sensor.
- Indicates line, differential and rising peak pressure.
- Easily scrolled from metric to US.
- 300 test memory.
- Capable of downloading saved data to download software.

Typical Applications

- Drilling equipment
- Mining
- Grinding and conveying
- Industrial hydraulics
- Mobile applications

Hydraulic system users need to ensure that lost production is kept to the absolute minimum. To ensure this, predictive maintenance utilising routine condition monitoring of hydraulic systems is essential.

System20 inline sensors remain at the heart of condition and contamination monitoring. Whether you're mining the coal, building the new bypass, harvesting the crops, crossing the oceans or drilling offshore – whatever your industry, System20 represents the premier system monitoring available today.

2 sizes of System20 Inline Mobile Sensors are available

System20

Inline Sensors & Monitors

Specification: Sensors

Construction:

Industrial: (STI)
 Body: S/Steel 303
 Internal components: S/Steel and Brass
 Mobile: (STS)
 Body: S/Steel 303
 Internal components: Cast Aluminium and S/Steel

Flow capacities:

All suitable for use with oil, water and oil/water emulsion
 Size 0: 6-25 l/min (1.58 - 6.6 US GPM)
 Size 1: 20-100 l/min (5.28 - 26.41 US GPM)
 Size 2: 80-380 l/min (21.13 - 100.38 US GPM)

Max. working pressure:

420 bar (6000PSI)

Capability:

Reverse flow (STI only)

Pressure drop:

At max. rated flow, Δp is 1.1 bar (mineral oil fluid at 30 cSt 140 SSU).

Ports:

Size 0: G³/₈
 Size 1: G³/₄
 Size 2: G1¹/₄

Repeatability:

±1% FSD

Accuracy:

Flow ±2.5% full scale deflection*

Weight:

Size 0: 0.5kg (1.2lbs)
 Size 1: 3.5kg (8.4lbs)
 Size 2: 4.4kg (9lbs)

Aggressive Fluid Applications:

EPDM internal/external seals

Dimensions (mm)

	1	STI	41	137	66.5
	2	STI	66.7	231.3	73.5
Mobile	1	STS	41	105	79
	2	STS	60	165	97

System20 Saving £50,000 Pump Damage

Installing System 20 was part of a major restructuring plan to improve mining effectiveness and profitability. Machine operator training and oil storage operative training were essential elements of the plan. Prior to this investment, pump terminal damage could cost £10,000 for a replacement, over £1000 service costs and up to £39,000 in lost production. Add to this the difficulties of the mine's geography and it's easy to see the problems that have now been overcome.

Note 4: *Accuracy 5.5% > 95 L/min. (Applies to STI1144100 and STI1148100 only)

System20 reduces the cost of lost Production

The mining industry puts a considerable demand on hydraulics and there are others such as agricultural machinery, harvesters or tractors and, for example, cement manufacturing plants that are equally demanding of hydraulic efficiency.

A grinding and conveying plant processes in excess of 1000 tons of ore per day in the manufacture of cement products. A days lost production costs £000's. After one year of operation the Plant Engineers decided to invest in System20 equipment, strategically placed to allow the Engineers to 'fault-find' the major components quickly and easily. The result is that downtime and loss of production have been reduced by 80%.

System20

EM20 Electronic Monitor

Electronic Monitor Specification

Construction:

A sealed assembly requiring no routine maintenance or adjustment. Body moulding in Acrylonitrile Butadene Styrene (ABS). Key pad moulded in silicon rubber. The monitor is suitable for use with all mineral oils, water and oil/water emulsions.

LCD details

Flow section:

The analogue flow scale has reverse flow and overflow indication and provides a percentage reading of the digital full scale display automatically calibrated for all sizes of System 20 Sensor.

Pressure section:

Designed to indicate line pressure, differential pressure and rising peak pressure. Connected to a System 20 Sensor it will monitor pressure up to 420 bar (6000 psi) with an accuracy of $\pm 1\%$ FSD.

Temperature section:

Temperature reading between -10°C and $+110^{\circ}\text{C}$ (14°F to 230°F).

Weight:

1.4kg (3lbs).

Data logging:

Each test logs the following data:

Test number; time & date; sensor size; media tested; flow rate, pressure & temperature.

Data download:

The System 20 electronic monitor is capable of downloading saved test data to a compatible PC via an RS232 connection using datum.

Batteries:

6 x AA batteries.

Re-calibration:

Annual certification by an approved Parker Service Centre.

System20

Analogue Monitor

Analogue Monitor Specification

Construction:

A sealed assembly requiring no routine maintenance or adjustment. Body moulding in Acrylonitrile Butadene Styrene (ABS). The monitor is suitable for use with all mineral oils, water and oil/water emulsions. The monitor has 3 dayglo dial gauges and features a protective hinged cover.

Gauge details

Flow section:

The flow scale has double scales for size 1 and 2 sensors only. Calibrated up to 100 l/min (26 US GPM) and 380 l/min (100 US GPM). The flow dial has excess-flow indication.

When the system is in reverse flow or when the high pressure lines to the sensor have been transposed, a 'below zero' indication is given.

Note: For measuring size Ø sensors - contact Parker

Pressure section:

Dial readings in both bar and psi up to 420 bar (6000psi).

Temperature section:

The temperature dial gives readings between -10°C and +110°C (14°F to 230°F).

Weight:

1.4kg (3lbs).

A viscosity chart is provided for mineral oil applications where monitoring is required at variable viscosities (cSt).

MCM20

Autoremove Particle Counter

Permanent installation ensures 24/7 monitoring of systems

Online continuous particle counting to protect fluid systems

MCM20 online continuous particle counting ensures constant system monitoring within defined parameters. PC/PLC controlled, it can be pre-set to carry out tests at specific intervals and connects permanently to a System20 sensor via a 2-metre hose assembly.

Contact Information:

Parker Hannifin
Hydraulic Filter Division Europe

European Product Information Centre
Freephone: 00800 27 27 5374

filtrationinfo@parker.com

www.parker.com/hfde

Product Features:

- MCM20 online continuous particle counting ensures constant system monitoring within defined parameters.
- Calibration carried out to ISO11171 via ISO11943 principles. Multi-standard ISO and NAS reporting including full count/100 ml. detection at size ranges.
- Interactive handset options available for direct test sequencing, change test parameters and last test results.
- PC/PLC controlled.
- Can be pre-set to carry out tests at specific intervals.
- Connects permanently to System20 sensors via 2 metre hose assembly.

MCM20

Autoremove Particle Counter

Features & Benefits

- The MCM20 is an online continuous particle counter ensuring constant system monitoring within defined parameters.
- PC/PLC controlled
- Ensures constant system monitoring.
- Can be pre-set to carry out tests at specific intervals.
- Can be set up via optional detachable Handset.
- Enclosed in a metal casing, with internal workings on a removable chassis for ease of service and calibration.
- Connects permanently to System20 sensors via 2 metre hose assembly (supplied).
- Simple data formatting programme for trend analysis.

Typical Applications

- Test rigs
- Construction machinery
- Industrial plant
- Hydraulic equipment & system manufacturers
- Paper processing
- Steel rolling mills
- Military equipment application

The Parker MCM20

Using proven portable particle counting technology (icountLCM20), the MCM20 and its principles are available to users where continuous, permanent installed monitoring is required.

The MCM20 utilises the latest laser diode method of particle counting. The unit is enclosed in a metal casing with access to the hydraulic connection, DC input power, fuse holder and PC/PLC connection ports located on the front panel.

The internal workings are manufactured onto a removable chassis for ease of service and calibration.

Test cycle time:

Variable between 30 seconds and 3 minutes.

Repeat test time:

Continuous Mode or between 30 seconds and 1440 minutes (24 Hours).

Principle of operation:

Optical scanning analysis and measurement of actual particles.

Particle counts:

6 channels either ACFTD or MTD calibrated.

International codes:

ISO 7-22, NAS 0-12.

Storage temperature:

-40°C to +80°C (104°F to 176°F).

Operating temperature:

+5°C to +60°C (41°F to 140°F) (hydraulic oil temperature).

Unit control connection:

Terminal protocol via RS 232 or optional handset.

Data retrieval:

Local PC / PLC program or by optional handset.

Calibration:

By accepted on-line methods confirmed by relevant International Standard Organisation procedures.

Re-calibration:

Annual certification by an approved Parker Service Centre.

Max. working pressure:

420 bar (6000 PSI).

Minimum working pressure:

2 bar (29 PSI).

Fluid compatibility:

Mineral oil or petroleum based fluids.
Aggressive fluid version also available.

Sample requirements:

0.3 – 1.5 DP bar (differential pressure) via approved inline sampling concept.

System connection:

Via System 20 inline sensors / single point sampler

Computer compatibility:

Interface via RS 232 connection @ 9600 baud rate.

Weight:

8.75kg.

Power requirement:

12 Vdc input. (1.25A (T) fuse). Regulated.

Installation:

Back/base M6x1.0 mounting inserts (see annotated diagrams).

Software:

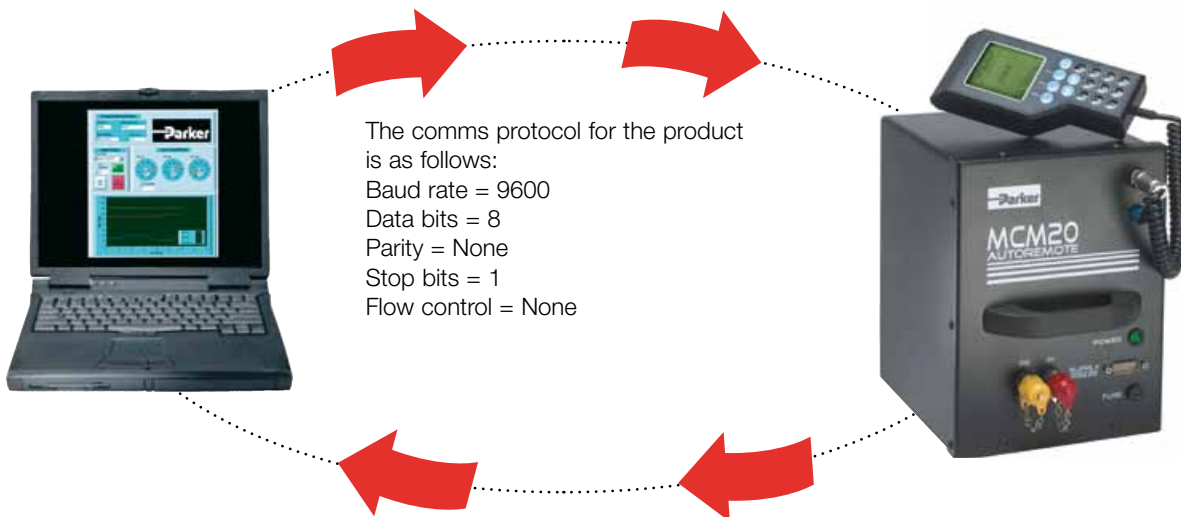

LabView demonstration software.

Dimensions (mm)

MCM20

Autoremove Particle Counter

The comms protocol for the product is as follows:
 Baud rate = 9600
 Data bits = 8
 Parity = None
 Stop bits = 1
 Flow control = None

Labview

Optional Remote Handset

- Customised demonstration/software for MCM operation.
- Full graphic display.
- Visual indication of limit parameters.

Optional remote handset for direct interface control. Please consult Parker for more information.

icountPD

Online Particle Detector

For mineral oil, aggressive fluids or fuels
(ATEX approved version available. See page 476)

Independent monitoring of system contamination trends

The icountPD Particle Detector from Parker represents the most up to date technology in particle detection. The design dynamics, attention to detail and moulding compactness of the permanently mounted, on-line particle detector module, combined with on-board, laser based, leading-edge technology, brings to all industries a truly revolutionary, particle detector as a remarkable cost effective market solution to fluid management and contamination control.

icountPD for mineral oil applications

- Independent monitoring of system contamination trends.
- Warning LED or digital display indicators for Low, Medium and High contamination levels.
- Visual indicators with power and alarm output warnings.
- Moisture %RH indicator (optional).
- Cost effective solution to prolong fluid life and reduce machine downtime.
- M12 8 pin or Deutsch Connector options.
- Continuous performance for prolonged analysis.
- Fuel, Hydraulic and phosphate Ester fluid compatible construction.
- Self diagnostic software.
- Full PC/PLC integration technology such as:- RS232 and 0-5Volt, 4-20mA, CAN(J1939) (Contact Parker for other options).
- Set up and Data logging support software included.

icountPD

Online Particle Detector

Features & Benefits

Diagnostic Self Check Start-up Time:

Customer selectable 5-900 seconds

Measurement Period:

5 to 180 seconds

Reporting interval through RS232:

0 to 3600 seconds

Digital -/LED display update time:

Every second

Limit Relay Output:

Changes occur +/- 1 ISO code at set limit (Hysteresis ON) or customer set (Hysteresis OFF)

Particle / % RH Output Signal:

Continuous

Principle of operation:

Laser diode optical detection of actual particulates

International Codes:

ISO 7 – 22, NAS 0 – 12

Calibration:

By recognised online methods confirmed by the relevant ISO procedures

MTD – Via a certified primary ISO 11171 automatic particle detector using ISO 11943 principles, with particle distribution reporting to ISO 4406:1996

ACFTD – Conforming to ISO 4402 principles with particle distribution reporting to ISO 4406:1996

Recalibration:

Contact Parker Hannifin

Performance:

+/- 1 ISO Code (Dependant on stability of flow)

Reproducibility / Repeatability:

Better than 1 ISO Code

Power Requirement:

Regulated 9 to 40Vdc

Current Rating:

Typically 120mA

Hydraulic Connection:

Mineral M16x2 test Points

Aggressive: 5/8" BSF test Points

Fuel: No test Points 1/8 BSP (Female) Ports (Plugged)

Required Flow Range through the icountPD:

40 to 140 ml/min (Optimum Flow = 60ml/min)

Online Flow Range via System 20 Inline Sensors (Hydraulic systems only):

Size 0 = 6 to 25 l/min - (Optimum Flow = 15 l/min)

Size 1 = 24 to 100 l/min - (Optimum Flow = 70 l/min)

Size 2 = 170 to 380 l/min - (Optimum Flow = 250 l/min)

Required Differential Pressure across Inline Sensors:

0.4 bar (Minimum)

Viscosity Range:

1-500 cSt

Temperature:

Ambient storage temperature -20°C to +40°C (-4°F to +104°F)

Environment operating temperature +5°C to +60°C (+41°F to +140°F)

Fluid operating temperature +5°C to +80°C (+41°F to +176°F)

Working pressure:

2 to 420 bar (30-6000 PSI)

Moisture sensor calibration (Not offered with the fuel version):

±5% RH (over compensated temperature range of +10°C to +80°C (+50°F to +176°F))

Operating humidity range:

5% RH to 100% RH

Moisture sensor stability:

±0.2% RH typical at 50% RH in one year

Certification:

IP66 rated. Refer to the EC Declaration of Conformity.

EMC/RFI – EN61000-6-2:2001

EN61000-6-3:2001

Materials:

User friendly Abs construction.

Stainless Steel hydraulic block.

Dimensions:

182mm x 155mm x 86mm (7.2" x 6.1" x 3.4")

Weight:

1.3kg (2.9lb)

Seals:

Mineral: Fluorocarbon. Aggressive: EPDM. Fuel: Fluorocarbon.

Computer Compatibility:

Parker recommends the use of a 9-way D-type connector. This can be connected to a USB port using a USB-serial adaptor. Note that these connectors/adaptors are **NOT** supplied with icountPD units: contact Parker Hannifin for advice.

icountPD for use with aviation fuels

Field Data - Major International Airport

First 3 measurements represent fuel from a previous cargo followed by a regular clean delivery, thus demonstrating the range of fuel cleanliness being experienced at this particular location.

icountPD for use with aviation fuels

Dimensions / Installation Details

mm
(inches)

Typical Applications

- **Mobile Equipment**

- Earth Moving Machinery
- Harvesting
- Forestry
- Agriculture

Monitoring of the hydraulics, enabling the vehicles to function to their best capability under load conditions through pistons, servo valves, control rams and gear pumps.

- **Industrial Equipment**

- Production Plants
- Fluid Transfers
- Pulp & Paper
- Refineries

To monitor the cleanliness of the equipment throughout the production line, from the machine tool controlled hydraulics through to contamination of fluid transfer. Ensuring the integrity of the fluid is maintained throughout the refining process.

- **Power Generation**

- Wind Turbines
- Gearboxes
- Lubrication Systems

With continuous monitoring the optimum level is achieved in the least amount of time.

- **Maintenance**

- Test Rigs
- Flushing Stands

To increase efficiency of your equipment by continuously monitoring the cleanliness level of the hydraulic fluid.

- **Fuel Contamination Detection**

- Fuel Storage Tanks
- Vehicle fuel tanks
- Uploading fuel into an aircraft

24/7 detection of particulate levels in most fuels including aviation fuel - Jet A-1 fuel specification.

Variable mA output settings

The following table can be used to equate the analogue output to an ISO or NAS Code.

Example ISO code 12 is equal to 10mA

mA	ISO	mA	NAS
4.0	0	4	00
4.5	1	5	0
5.0	2	6	1
5.5	3	7	2
6.0	4	8	3
6.5	5	9	4
7.0	6	10	5
7.5	7	11	6
8.0	8	12	7
8.5	9	13	8
9.0	10	14	9
9.5	11	15	10
10.0	12	16	11
10.5	13	17	12
11.0	14	18	**
11.5	15	19	**
12.0	16	20	ERROR
12.5	17		
13.0	18		
13.5	19		
14.0	20		
14.5	21		
15.0	**		
15.5	**		
16.0	**		
16.5	**		
17.0	**		
17.5	**		
18.0	**		
18.5	**		
19.0	OVERRANGE		
19.5	OVERRANGE		
20.0	ERROR		

The following table can be used to equate the analogue output to an ISO or NAS Code.

Example ISO code 12 is equal to 10mA

4-20mA output settings

ISO Setting

mA current = (ISO Code / 2) + 4 eg. 10mA = (ISO 12 / 2) + 4

or

ISO Code = (mA current - 4) * 2 eg. ISO 12 = (10mA - 4) * 2

NAS Setting

mA current = NAS Code + 5 eg. 15mA = NAS 10 + 5

or

NAS Code = mA current - 5 eg. NAS 10 = 15mA - 5

Variable voltage output settings

The variable voltage output option has the capability of two different voltage ranges: a 0–5Vdc range as standard, and a user-selectable 0–3Vdc range. The 'Full list of commands' on how to change the voltage output, are available from Parker.

The following tables can be used to relate the analogue output to an ISO or NAS code.

For example, in a 0–5Vdc range, ISO code 16 is equal to an output of 3.5Vdc. In a 0–3Vdc range, ISO code 8 is equal to an output of 1.0Vdc.

Table relating ISO codes to Voltage output

ISO	Err	0	1	2	3	4	5	6	7	8	9	10	11
0–5Vdc	<0.2	0.3	0.5	0.7	0.9	1.1	1.3	1.5	1.7	1.9	2.1	2.3	2.5
0–3Vdc	<0.15	0.2	0.3	0.4	0.5	0.6	0.7	0.8	0.9	1.0	1.1	1.2	1.3

cont.

ISO	12	13	14	15	16	17	18	19	20	21	22	Err
0–5Vdc	2.7	2.9	3.1	3.3	3.5	3.7	3.9	4.1	4.3	4.5	4.7	>4.8

icountPD

Online Particle Detector

Digital display parameters (ISO 4406/NAS 1638)

Start up

1. Once the icountPD has been connected to a regulated power supply, the product logo is displayed for approximately five seconds as the icountPD performs a self system diagnostic check.
2. The icountPD then automatically starts monitoring using factory default test parameters.

Digital display indication

The digital display will show the actual measured codes, the channel (μ) size and the user definable limits. Note that the channel size and limits are displayed alternately.

The Moisture Sensor reading (%RH) will also be shown – if the Moisture Sensor option is fitted.

The order of trigger for both the codes and Moisture Sensor option is:

- Solid digit(s) = code(s) that are at or below the set point (limit)
- Flashing digit(s) = code(s) that are above the set point (limit)

The display for ISO4406 and NAS1638 are identical.

Error detection:

In the unlikely event of a error occurring, the digital display on the icountPD will simply display the actual error code only – i.e. ERROR 13 (A full list of error codes are detailed in the icountPD User Manual).

Moisture sensor output settings

The Moisture Sensor is an option that can be included when ordering the icountPD.

The Moisture Sensor reports on the saturation levels of the fluid passing through the icountPD sensing cell. The output is a linear scale, reporting within the range of 5% saturation to 100% saturation.

Table relating Saturation levels in the sensing cell to icountPD outputs

Saturation	4–20mA	0–3Vdc	0–5Vdc
5%	4.8	0.15	0.25
25%	8	0.75	1.25
50%	12	1.50	2.50
75%	16	2.25	3.75
100%	20	3.00	5.00

Flow control ACC6NN019

A pressure compensated, flow control device (Parker Hannifin part number ACC6NN019) has been developed to give the icount PD greater flexibility.

The flow control device enables testing where flow ranges are outside the icountPD specification i.e. (40 – 140 ml/min), or where pipe diameters do not allow the icountPD to be installed.

The flow control device fits onto the downstream (outlet) side of the icountPD. A 06L EO 24 deg cone and hydraulic adaptor is supplied which enables connection directly to the icountPD. Alternatively the flow control device can be fitted further downstream.

The compact design requires no setting up or further user intervention as long as the system conditions remain within the recommended pressure and viscosity ranges as below.

P/N ACC6NN019

Working pressure range	10 to 300 bar
Differential pressure range	10 to 300 bar
Working viscosity range	10 to 150 Cst

icontains – Oil Sampler (IOS)

- New and under development in the detection of contaminates distribution in various Aviation fuels.
- Portable monitoring tool providing fluid qualification to ISO 4406:1999 standards.
- Supplements the icount LCM20 and ACM20 product portfolio.
- Quick, simple to use monitoring tool for sampling fluids from containers, fuel bunkers and holding tanks.
- Field solution to Laboratory methods for the detection of solid contamination and free water inference.

Hydraulic Connection Diagram

Dimensions

Flow Control Actuator Specification (P/N S840074)

Operation	Manual flow rate adjustable via control knob
Mounting Type	4 off mounting holes to suit M6 screws (not supplied)
Mounting position	Any
Weight	1.7kg (3.7lb)
Fluid Temperature	5°C to +80°C (+41°F to 176°F)
Ambient storage temperature	-20°C to +40°C (-4°F to +104°F)
Viscosity range	20cSt to 500cSt (If lower than 20cSt contact Parker)
Differential pressure range	5 to 315 bar
Maximum pressure	315 bar
Flow direction	'IN' to 'OUT' flow control function
Port thread detail	1/8" BSPP (test points not supplied)
Internal Seals	Fluoroelastomer

This application shows uploading fuel into an aircraft with the icountPD in use to monitor as a 'go/no go' device.

Communication Options

The icountPD may be configured using the icountPD Setup Utility. For more direct control of the device using its communications protocol, you may also use the Microsoft Windows® HyperTerminal program, but note that this program is not currently supplied with the Windows Vista™ operating system. These two ways of communicating with icountPD are described in the following section.

icontainsPD Setup Utility software (supplied)

Communication Protocol

The Communication protocol for the serial communication link is to be used with **Microsoft Windows HyperTerminal**. The settings are as follows:

Baud rate 9600
Data bits 8
Parity None
Stop bits 1
Flowcontrol None

The commands used with this product are made up of Read, Set and Start / Stop commands.

- Set commands allow the value or values of parameters to be set
- Read commands allow the value or values or parameters to be read
- Start/Stop allows the user to start and stop tests.

Example:

[SDF dd/mm/yy] - sets the date format.

[RDF] - reads the product date format.

All commands are sent in ASCII characters, and the protocol accepts both upper and lower case characters as the examples below:

SDF

SdF

Note: A full list of commands are detailed in the user manual

icountPDR

Robust Online Particle Detector

Customer Value Proposition

The icountPDR Robust Particle Detector from Parker represents the most up to date technology in particle detection. The design dynamics, attention to detail and moulding compactness of the permanently mounted, on-line particle detector module, combined with on-board, laser based, leading-edge technology, brings to all industries a truly revolutionary, particle detector as a remarkable cost effective market solution to fluid management and contamination control.

Specification

5 seconds minimum
5 to 180 seconds
0 to 3600 seconds via RS232 communication
Laser diode optical detection of actual particulates
ISO 7 – 22, NAS 0 – 12
By recognised online methods confirmed by the relevant ISO procedures:
MTD – Via a certified primary ISO 11171 automatic particle detector using ISO 11943 principles, with particle distribution reporting to ISO 4406:1996
Contact Parker Hannifin
2 to 420 bar (30-6000 PSI)
Note: Flow may be bi-directional
40 to 140 ml/min (Optimum Flow 60ml/min)
(0.01 – 0.04 USGPM (optimum flow 0.016 USGPM))
Size 0 = 6 to 25 l/min (2-7 USGPM)
Size 1 = 24 to 100 l/min (6-26 USGPM)
Size 2 = 170 to 380 l/min (45-100 USGPM)
-40°C to +80°C (-40°F to +176°F)
-30°C to +60°C (-22°F to +140°F)
+5°C to +80°C (+41°F to +176°F)
Parker recommends the use of a 9-way D-type connector. This can be connected to a USB port using a USB-serial adaptor. Note that these connectors/adaptors are **NOT** supplied with icountPDR units: contact Parker Hannifin for advice.
±5% RH (over compensated temperature range of +10°C to +80°C; +50°F to +176°F)
5% RH to 100% RH
±0.2% RH typical at 50% RH in one year
Regulated 9 to 40Vdc
Typically 120mA
IP69K rating.
EC Declaration of Conformity

4–20mA
0–5Vdc, 0–3Vdc (user selectable)
to SAE J1939 (e.g. Parker IQAN)
Linear scale within the range 5% RH to 100% RH

Flow control

LOW TO MEDIUM VISCOSITY FLOW CONTROL OPTION

A pressure compensated, flow control device (Parker Hannifin part number ACC6NN023) has been developed to give the icountPDR user greater flexibility. The flow control device enables testing where flow ranges are outside the icountPDR specifications (i.e. 40–140 ml/min), or where pipe diameters do not allow the icountPDR to be installed.

The flow control device fits onto the downstream (outlet) side of the icountPDR. A 06L EO 24deg cone end hydraulic adaptor is supplied which enables connection directly to the icountPDR. Alternatively the flow control device can be fitted further downstream.

The compact design requires no setting up or further user intervention as long as the system conditions remain within the recommended pressure and viscosity ranges as below.

Working pressure range	10 to 300bar
Differential pressure range	10 to 300bar
Working viscosity range	10 to 150 Cst

Dimensions / Installation Details

Dimensions are given in mm (inches)

Four mounting locations (two each side) to suit M8 (5/16 inch) fixings, supplied. Flange thickness is 2mm (5/64 inch)

Typical Applications

● Mobile Equipment

- Earth Moving Machinery
- Harvesting
- Forestry
- Agriculture

Monitoring of the hydraulics, enabling the vehicles to function to their best capability under load conditions through pistons, servo valves, control rams and gear pumps.

● Industrial Equipment

- Production Plants
- Fluid Transfers
- Pulp & Paper
- Refineries

To monitor the cleanliness of the equipment throughout the production line, from the machine tool controlled hydraulics through to contamination of fluid transfer. Ensuring the integrity of the fluid is maintained throughout the refining process.

● Power Generation

- Wind Turbines
- Gearboxes
- Lubrication Systems

With continuous monitoring the optimum level is achieved in the least amount of time.

● Maintenance

- Test Rigs
- Flushing Stands

To increase efficiency of your equipment by continuously monitoring the cleanliness level of the hydraulic fluid.

● Fuel Contamination Detection

- Fuel Storage Tanks
- Vehicle fuel tanks
- Uploading fuel into an aircraft

24/7 detection of particulate levels in most fuels including aviation fuel - Jet A-1 fuel specification.

icountOS

Oil Sampler

Portable condition monitoring for hydraulic oil and fuel systems

The icountOS (Oil Sampler) from Parker offers users a compact, lightweight, robust and truly portable oil and fuel sampling and analysis solution that is both quick to use and accurate in its results. Utilising on-board, laser based, leading-edge technology, the IOS brings to all industries a truly innovative portable oil sampler as a remarkable, cost effective market solution to fluid management and contamination control.

- Fluid viscosity as high as 300cSt (usable range) will be able to pass through the detector at the proper flow rate.
- Quick connections for testing hydraulic fluid online and offline.
- Reporting Standards ISO4406:1999, NAS1638 and RH% moisture sensor display in high intensity OLED format.
- Data Storage up to 250,000 test points of information.
- Compact, lightweight and robust, truly portable IOS makes field analysis simple, quick and easy.

- Able to sample directly from a hydraulic reservoir, barrel and vehicle fuel tank or from a high pressure, online hydraulic system with the addition of a pressure reducing adaptor.
- Completely self contained, with laser detection particle counter (icountPD), rechargeable battery and flow management pump.
- No special software needed. Embedded web page generator for data download onto any PC or laptop via a universal RJ45 connection interface.
- Fast detection of the presence of contamination with a sampling period from 5 seconds to 999 seconds.

Accurate condition monitoring made quick, simple and cost effective

The icountOS (IOS) is an innovative solution to the challenge of measuring the quality of hydraulic oils and hydrocarbon fuels in many different applications: from renewable energy, marine and offshore, to manufacturing, mobile, agriculture, military and aerospace.

Compact, lightweight and robust, the truly portable IOS makes field analysis simple, quick and easy.

Able to sample directly from a hydraulic reservoir, barrel, vehicle fuel tank or from a high pressure online hydraulic system with the addition of a pressure reducing adaptor; the IOS

is undoubtedly the most adaptable contamination service tool available today.

The system is completely self contained, with laser detection particle counter, battery and pump plus memory with web page generator for data download onto any PC or laptop - combined into a single unit.

The IOS uses Parker's proven laser detection technology, which delivers precise, repeatable, reproducible results, in real time detection of both particulates, down to 4 microns (c) and dissolved water.

Just as importantly, the IOS has been developed to offer a wealth of features, combined with simplicity and ease of use, at a cost that is far lower than competing systems, and which fits within most maintenance budgets.

Powerful and easy to use

Lightweight and portable

Wherever, whenever you need to be 100% sure of oil and fuel quality

With its robust carrying case, sealed to IP67, and proven laser and diagnostics technologies, the IOS is the perfect tool for maintenance and plant engineers to use with all fixed and mobile plant and machinery.

IOS technology is proven in many different applications, under the most demanding conditions, and is used by leading companies around the world.

In the construction and mining sector, IOS is ideally suited to service and fluid monitoring of essential equipment and services.

Dans l'industrie de la défense, l'IOS fournit un soutien de contrôle d'état essentiel pour les chars de combat destinés à opérer sur la ligne de front et des véhicules militaires en missions critiques.

The IOS is the primary diagnostic instrument to help automotive manufacturers develop predictive monitoring programmes.

Ease of on-site use, light weight and portability are key IOS features for monitoring fuel quality in military bulk fuel installations in theatre.

Accuracy and speed of use make the IOS ideal for wind turbine engineers, for both routine maintenance and emergency repairs, flushing and commissioning.

In the aviation sector, the ability to meet strict quality controls makes the IOS the ideal choice for ground handling support companies, ensuring clean and dry fuel deliverance.

How the IOS works

The IOS quality condition monitor for hydraulic oils and hydrocarbon fuels uses advanced technology to produce extremely repeatable results.

At the heart of the system is a sophisticated laser detector, using a light obscuration flow cell, providing continuous measurement of fluid flow passing through a sample tube.

Measurements are taken every second as standard, although measurement intervals and test period can be defined by the user, with results being reported immediately and updated in real time.

Data is displayed on a built-in OLED digital display and can also be stored for subsequent upload via the embedded icount's web page interface connecting through an RJ45 cable.

Proven laser detection technology

Parker's experience in developing laser light obscuration or blockage and applying that technology in portable particle counting and detection is what makes Parker's range of contamination analysers so very special.

Fig 1. In simple terms a controlled column of contaminated fluid enters the laser optical scanner chamber. This design maintains contamination distribution within the fluid.

Fig 2. On reaching the photo diode cell, the highly accurate laser light is applied and projected through that oil column. The laser diode projects an image of the sample onto a photo diode cell.

Hydraulic circuit

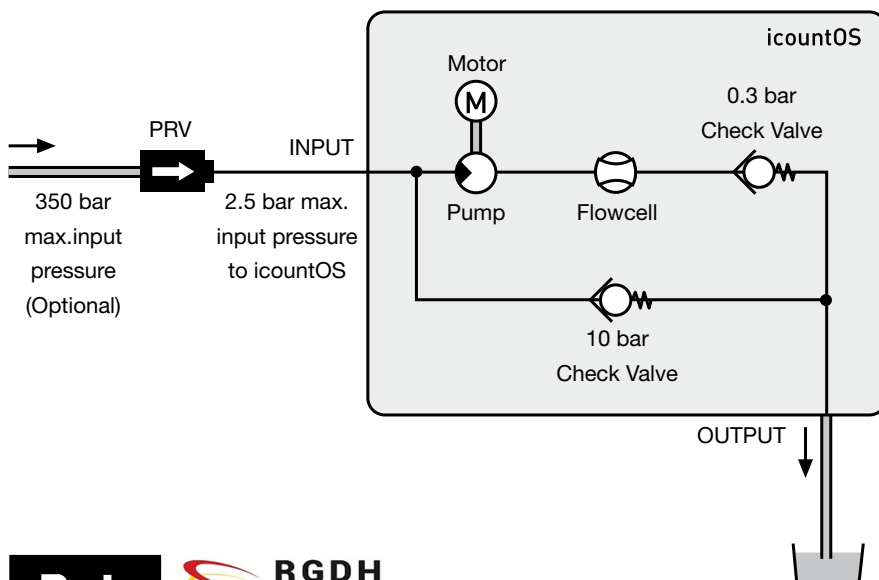

Fig 3. A cast image or shadow created by the contaminant in the oil creates a measurable change in the light intensity.

Features that boost your productivity

Proven laser detection technology

The IOS uses light obscuration, light blockage technology. A light source is projected through a moving column of oil or fuel. Contaminants in the fluid interrupt the light beam, casting images on a photo diode cell, where the resulting change in light intensity produces a directly proportional change in electrical output.

High onboard test data storage capacity

Class leading onboard memory provides storage capacity for up to 250,000 sets of test results. Data is displayed instantly, stored or downloaded to a PC or laptop for analysis via a standard IP68 RJ 45 patch cord connection; a 2m cable is supplied as standard. (File types - text/CSV or XMI)

Tough storm casing

The robust waterproof IP54 (When open) case and fully sealed impact resistant brushed stainless steel front panel provide excellent protection in the most demanding of applications. The combined unit weighs under 5.5kg, making it an ideal 'first use' diagnostic service tool.

Fast contamination detection

The IOS provides fast detection of the presence of contaminants, with the results being shown on the front panel mounted, high visibility OLED digital display. This provides easy identification of fluid condition, showing measured codes, the sizes per channel in microns (c), the user definable limits and moisture sensor readings as a % of relative humidity..

Quick connection

Connecting the IOS is quick and reliable. The fluid connectors are on the front panel, with two secure push fittings: 6mm diameter inlet and 4mm diameter outlet/drain. Parker can supply dedicated hoses and fittings for use with most hydraulic and hydrocarbon fluids.

Long life remote operation

The IOS uses a long life regulated 12 Vdc power supply, with an M12, 4 pin connector, plus a rechargeable NiMH detector battery unit for use onsite or in remote locations.

Complies with the latest standards

The IOS is designed in accordance with the latest global standards including:

- CE marking
- EC Declaration of Conformity
- Machinery Directive
- EMC EN61000-6-3:2001
- EMC EN61000-6-2:2001
- EN 61010-1:2001

Fluid and pressure control

The IOS automatically adjusts flow rates, to an optimum level of 60ml/min. Total flow range is between 40 and 140ml/min, with maximum online operating pressure being 2.5Bar (36psi). An optional inlet reduction valve is also available for high pressure applications.

Results are viewed in the OLED digital display window

Pressure reducing valve (PRV)

A pressure compensated PRV device (Parker Hannifin part number ACC6NN027) has been developed to enable testing where flow pressures in the hose exceeds 2.5 bar, up to a maximum of 350 bar.

Parameter	Value
Working pressure range	0 to 2.5 bar
Working pressure with PRV	2.5 to 350 bar
Working viscosity	1 to 300 cSt

High Pressure Connection

Manual Connection: Press the Pressure Reducing Valve firmly into the **INLET** port

Low Pressure Connection

Connect **INLET** (Ø 6mm) hose

IOS Technical Specifications

Dimensions

Dimensions are given in mm (inches)

Low pressure connection setup

We recommend that the IOS is positioned in a safe, stable area, as close as possible to the system output and only the hose fittings provided are used.

Option 1

Option 2

High pressure connection setup (Optional equipment needed)

(High pressure is defined for this unit as more than 2.5 bar, with a maximum of 350 bar)

We recommend that the IOS is positioned in a safe, stable area, as close as possible to the system output and only the hose fittings provided are used. For pressure systems (more than 2.5 bar) one high pressure hose assemblies: ACC6NN034, and a Pressure Reducing Valve (PRV) ACC6NN027 are required.

Attach **OUTLET** (Ø 4mm) hose

To remove the PRV, press down on the removal tool at the same time as lifting PRV off.

The IOS web interface

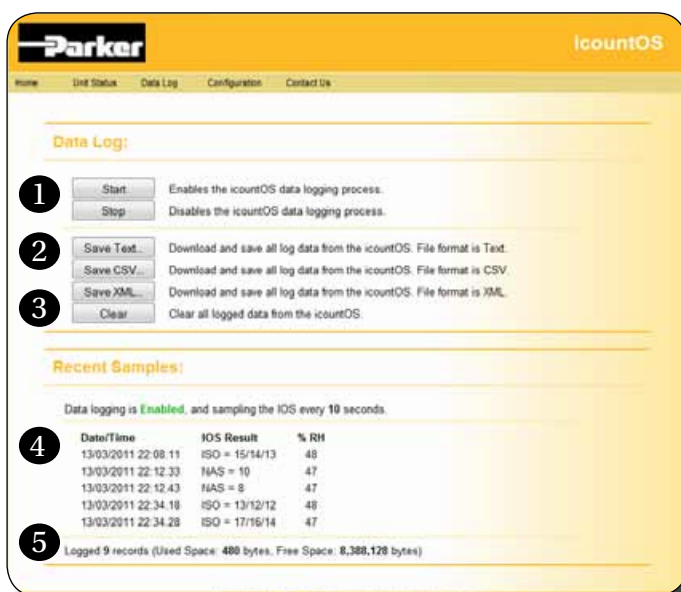

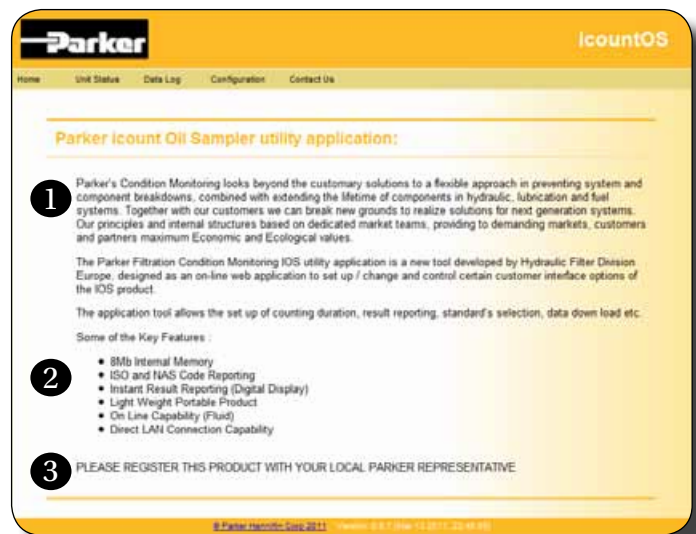

The IOS is a unique product in that it has its own web page generator which means that the stored data can be downloaded or viewed on any PC or laptop.

Utilising a computer's Internet Explorer utility, simply plug in the supplied network cable, open Explorer and enter the IOS's unique IP/MAC address.

Measurement period	Default 30 seconds run time; 15 seconds data logging time
Reporting interval	Onboard data storage every second. Output via RJ45 connection
Principle of operation	Laser diode optical detection of actual particulates
International codes range	Up to ISO 22 (+/- 1 ISO code) NAS 0-12
Calibration	Calibration by recognised online methods confirmed by the relevant ISO procedures. MTD – via a certified primary ISO 11171 automatic particle detector using ISO 11943 principles. Particle distribution reporting to ISO 4406:1999
Recalibration and Servicing	Recommended every 12 months
Working pressure	2.5–350 bar (35–5000psi) Pressures above 2.5 bar require the use of a Parker Pressure Reducing Valve (PRV) – ACC6NN027
Working viscosity	1-300 cSt
Flow range through IOS	40–140ml/minute; controlled at 60ml/min by IOS's internal pump
Fluid connection interface	INLET: 6mm push-fit. DRAIN: 4mm push-fit
Ambient storage temperature for unit	–40°C to +80°C; –40°F to +176°F
Operating temperature for unit	–30°C to +80°C; –22°F to +176°F
Operating humidity range	5%RH to 100%RH
Fluid operating temperature (Oil)	+5°C to +80°C; +41°F to +176°F
Fluid operating temperature (Fuel)	–20°C to +70°C; –4°F to +158°F
Moisture sensor	Linear scale within the range 5%RH to 100%RH
Computer compatibility	IP68-rated RJ45 connection that may be connected to a laptop computer's RJ45 LAN port using the 2m cable supplied
Power requirement	Regulated power supply supplied with the unit
Certification	IP54 rating (unit open) IP67 rating (unit closed) EC Declaration of Conformity Machinery Directive EMC EN61000-6-3:2001 EMC EN61000-6-2:2001 EMC EN61010-1:2001 CE Certified

What is included?

Offline IOS 1210 EUR/UK/US	Online IOS 1220 EUR/UK/US
1x IOS Oil Sampler Unit	1x IOS Oil Sampler Unit
+ 1x Power Supply	+ 1x Power Supply
+ 1x RJ45 LAN Cable	+ 1x RJ45 LAN Cable
+ Low Pressure Hoses	+ 1x Low Pressure Hose
	+ 1x PRV
	+ 1x High Pressure Hose

Important Information

WARNING-USER RESPONSIBILITY

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

- This document and other information from Parker-Hannifin Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise.
- The user, through their own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety and warning requirements of the applications are met.
- The user must analyse all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalogue and in any other materials provided from Parker or its subsidiaries or authorised distributors.
- To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems. The operation of the products described here in is subject to the operating and safety procedures details of which are available upon request.

Sales conditions

The items described in this document are available for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. Any sale contract entered into by Parker will be governed by the provisions stated in Parker's standard terms and conditions of sale (copy available upon request).

icount Lubrication and Hydraulic Oil Monitoring system

An all-in-one particle detection system

Developed around the proven Parker icountPD particle detector

Particle detection is the best known way to determine whether oil is contaminated or not and the best way to detect particles online or offline is by using Parker's icountPD. To make results even easier to obtain we added some extra equipment.

Product Features:

Wind turbines

- Gear boxes
- Hydraulic systems in pitch, yaw and brake

Shipping and shipbuilding industry

- Propulsion systems
- Thrusters
- Deck machinery

Steel and pulp & paper industry

- Lubrication oil systems
- Hydraulic system control of presses and winders

Power generation

- Lubrication oil systems
- Hydraulic system control for fuel feeding

Proactive maintenance with icount

With the icount System, the early bird stands every chance of catching the worm.

Be that early bird and schedule oil changes through predictive maintenance of the system and plan service times. Parker's icount system provides early warning of any unwanted changes in hydraulic or lubrication oil quality. Thus increasing the availability of the machinery by reducing the need for unnecessary downtime.

Insurance companies are able to lower fees as the icount System warns of possible component failure. It also reduces the warranty costs thanks to an integrated pump unit that enables a cost effective solution to monitor oil from different points of a system.

icount SYSTEM		
	Standard	Options
Electric motor	230VAC	110VAC, 24 VDC
Pump	X	
Flow control unit	X	
Pressure control valve		for pressurized systems
Particle detector	icountPD	
Local display	led	none, digital, GSM
Communications	RS232	RS232/4-20mA, RS232/0-5V, RS232/Canbus
Moisture sensor		X
Limit Relay		X
Cable connector kit	M12 - 8 pin	
Short start module		X
Mounting	bracket	sealed box

Parker's icount System housing can include several options to guarantee uniform sample handling and measuring any required aspect of oil quality.

You can trust icount accuracy

Parker icount Lubrication and Hydraulic Oil Monitoring System is available today. It features Parker's laser technology and all necessary components for reliable monitoring up to 1000 cSt oil viscosities. The unit allows

system monitoring and accurate particle detection from any available source.

A moisture sensor as an option to measure the relative humidity of the oil and other add-on sensors like viscosity measurement are also available.

Several power versions for easy installation and worldwide operation are

available. The system is capable of data transmission in multiple forms and central control can collect information and manage easily for example large marine wind farms off shore and on land.

A special design for wind turbine applications with pressurized connection is available. Correct oil pressure and steady flow ensure consistent measuring.

icountPD

For more information contact Parker.

The icountPD Particle Detector from Parker represents the most up to date laser based technology in particle detection. Standard in every icount Monitoring System.

icountMS Range

Fluid Condition Monitoring –
Moisture Sensors

**An essential
component of
any predictive
maintenance
programme**

**Fast, reliable and accurate
inline detection of moisture
in fluids**

MS moisture sensors provide fast, reliable and accurate inline detection of moisture in fluids. Technology developed for preventative maintenance programmes. MS150 is the 'low pressure' option for suction line/reservoir applications. MS200 is the 'Programmable' sensor monitoring and reporting relative humidity (RH), moisture content in oils. MS300 'Intrinsically safe' sensor ATEX certified for use in hazardous Zone 0 environments.

Product Features:

- MS moisture sensors provide fast, reliable and accurate inline detection of moisture in fluids.
- Technology developed for preventative maintenance programmes.
- MS150 'low pressure' suction/Return line applications. 10 bar maximum operating pressure.
- MS200 'Programmable' sensor monitoring and reporting relative humidity (RH), moisture content in oils. 420 bar MAOP.
- MS300 'Intrinsically safe' sensor ATEX certificated for use in hazardous Zone 0 environments. 420 bar MAOP.
- Temperature Outputs on all versions.

icountMS Range

Cost Effective Moisture Detection

Features & Benefits

- Continuous, online moisture indication, for hydraulic and lubricating systems.
- Reporting of % relative humidity of water content, giving the user information on how close to the fluids real saturation point.
- Reliable data on the rate of water absorption.
- Sensing cell technology using a laser trimmed thermostet polymer, for capacitive sensing that is capable of absorbing water molecules due to its micro porous structure.
- Uses a thermistor for temperature compensation correction. Offering total confidence in reporting the %RH relative humidity over the sensors temperature range.
- A purpose designed tee adaptor allows for easy installation into an existing fluid system.
- The MS200 can also be specified with a bench top wand offering the end user greater flexibility.
- Wand not available with MS150 or MS300

Typical Applications

- Ground support vehicles
- Pulp and paper plants
- Marine hydraulics
- Power transmission & distribution
- Forestry
- Industrial hydraulics
- Earth moving applications
- Agricultural
- Hazardous Areas (Zone 2)
- Theme parks (Ride hydraulics)

In-Line Moisture Measurement of Hydraulic & Lubricating Oils.

Parkers Moisture Sensor Range offers fast, reliable and accurate in-line detection of moisture in fluids. The MS transducer type technology has been especially designed with the preventative maintenance programme environment in mind.

The industry accepted sensing cell device will monitor and report Relative Humidity (RH), moisture content in oils. The water content measurement technique offers the end user benefits over the current standard form of water content reporting (PPM).

This allows for real time preventative maintenance to be undertaken and corrective actions to be made. By knowing that the water contamination is still within the oils absorbing range, less than 100%, reclaiming fluid properties before additive damage occurs can initiate calculable cost savings.

MS150 Moisture Sensor

Specification

Pressure:

Maximum allowable operating pressure. (MAOP): 10 bar (145 PSI).

Operating temperature:

Minimum: -20°C (-4°F).

Maximum: +85°C (+185°F).

Flow through sensor cell:

Installed in active flowstream.

Fluid compatibility:

Mineral oils and petroleum-based fluids

Viscosity range:

Unlimited.

Port connections:

1/4" BSPT or 1/4" NPT.

Connector Details:

M12x1 - 5 way

Supply voltage:

+8 to +30 Vdc.

Sensor size/weight/material:

80mm x 43mm/0.1kg/Aluminiumz

IP ratings:

IP68 % (When mated with moulded connector)

RH Outputs:

(+1 to +5 Vdc) or (4 to 20mA)

Temperature Outputs:

0 to +5 Vdc

Installation Details

Thread Form Options (MS150 + MS200)

BSPT

NPT

Sensor Outputs

MS150 moisture sensor pin designations			
Pin	Designation	I/O	Description
1	Supply	Input	Supply voltage (+8 to +30Vdc)
2	%RH	Output	% Saturation out (+1 to +5Vdc)
3	%RH	Output	% Saturation out (+4 to +20mA)
4	Temperature	Output	Temperature out (0 to +5Vdc)
5	Common	Input	Common (0Vdc) ground from power supply (not chassis ground)

MS150 Pin Designations

Interpreting the data

Oil type: Texaco Rando 46.

Saturation point: 400ppm @ 65°C (150°F).

At the above operating condition, the meter displays 100% saturation. As the meters scale indicates a reduction in the saturation percentage, there is also a corresponding reduction in PPM at a constant temperature. In the example above, a meter reading of 50% saturation could be interpreted as 200ppm at 65°C (150°F).

MS200 'Programmable'

Specification

% Saturation Calibration Accuracy:	+3% RH
Temperature Calibration Accuracy:	±1°C
Thermal Stability:	±1% RH (over compensated temperature range +10 to +80°C)
Stability:	±0.2% RH typical at 50% RH in 1 year
Linearity:	±0.5% RH typical
Analogue Output Hysteresis:	±0.5% RH Full Scale
Switched Output Hysteresis:	2% RH
Operating Temperature Range:	-40°C to +85°C (-40 to +185°F)
Operating Humidity Range:	5 to 100% RH (non condensing)
Response Time:	60 sec in slow moving air at 25°C
Maximum rated pressure:	420 Bar (6000 PSI)
Maximum torque on spanner flats:	30 Nm (ONLY USE SPANNER FLATS TO INSTALL AND REMOVE THE MOISTURE SENSOR)
Seal Material (depending on MS):	Fluorocarbon, EPDM, Perfluoroelastomer
Material:	Stainless Steel 303
Connector Details:	M12x1, 8 Way, IP67 Connector (IP68 when mated with moulded cable)
Maximum Cable Length:	10 Metres with Voltage Output 100 Metres with Current Output
Output:	SEE ORDERING INFORMATION

Moisture Sensor Wiring and Pin Designations

Pin	Designation	I/O	Description
1	Alarm Switch	Output	Alarm Switch. Constant 5Vdc when in normal operation. Switch to 0Vdc when in alarm condition. Red LED illuminates when Sensor is in an alarm condition.
2	Analogue	Output	Temperature - Degf Celsius. User Select Output (0-3Vdc, 0-5Vdc, 1-6Vdc and 4-20mA).
3	Alarm Limit	Output	Alarm Limit (0-6V). Output that directly corresponds to the alarm set point.
4	Analogue	Output	% Saturation. User Select Output (0-3Vdc, 0-5Vdc, 1-6Vdc and 4-20mA).
5	Receive	Input	RS232 Communication.
6	Send	Output	RS232 Communication.
7	Common	Input	Common (0Vdc). Ground from power supply.
8	Supply	Input	Supply Voltage (+8 to +30Vdc). Green LED illuminates when power is properly applied.

M12, 8 Way Connector

MS Pin Details

MS300 Intrinsically Safe

Specification

Pressure:

Maximum allowable operating pressure.
(MAOP): 420 bar (6000 PSI).

Operating temperature:

Minimum: -40°C (-40°F) - dependent on seal material.
Maximum: +85°C (+185°F).

Flow through sensor cell:

Installed in active flowstream.

Fluid compatibility:

Mineral oils, petroleum-based and Phosphate ester-
Skydrol option available.

Viscosity range:

Unlimited.

Thread form connections:

See ordering information.

Outputs:

4-20mA (current loop).

Calibration accuracy:

+/- 5% RH

Compensated thermal stability:

+/- 1% RH (+ 10°C to +80°C)

Materials:

Stainless steel 303.

Sensor size/weight:

107mm x ø50mm/0.3Kg.

IP ratings:

IP68 (with specified moulded cable)

Developed in association with Triteq Ltd.

Installation Details – See MS300 Manual

Moisture Sensor Connection Diagram

MS300 Intrinsically Safe

Installation details continued

The MS300 has been certified as Intrinsically Safe Electrical Apparatus and offers fast, reliable and accurate in-line detection of moisture in fluids for use in hazardous areas.

ATEX Certification (See page 71) allows the MS300 into areas of a potentially explosive atmosphere, that have previously not been allowed without permits, it is intended for use in Zone 0 hazardous areas requiring the use of category 1G equipment and has been designed for use with galvanic isolators to the specified values stated below:

The electrical parameters: U_i : 28V I_i : 93mA P_i : 0.65W C_i : 380nF L_i : 0

The following instructions apply to MS300 - 4-20mA Current Loop Moisture Sensor covered by certificate number Sira 07ATEX2255:

1. The equipment may be located where flammable gases of Group I may be present. The equipment is only certified for use in ambient temperatures in the range -20°C to $+40^{\circ}\text{C}$ and should not be used outside this range.
2. The equipment has not been assessed as a safety-related device (as referred to by Directive 94/9/EC Annex II, clause 1.5).
3. Installation of this equipment shall be carried out by suitably trained personnel in accordance with the applicable code of practice.
4. Repair of this equipment shall be carried out by the manufacturer or in accordance with the applicable code of practice (IEC 60079-19).

Visual Indicators Specifications

Bar Graph Indicator (PBG8341A)

Construction:

Housing – nylon 6/6, window – acrylic, bezel/board supports – ABS, pins – phosphor bronze.

Power supply:

11 – 30 Vdc.

Signal input: (By dipswitch configuration)

Off – differential up to 5V.

A – single signal (Ref. 0V) up to 5V.

B – single signal (Ref. 1V) up to 6V.

Cut out size:

45.6mm x 45.6mm.

Fixing:

Push fit panel thickness 0.9mm to 3.2mm.

Sealing:

Designed to IP50 standard.

(Front face may be silicon sealed after LED configuration).

Scale:

Supplied 0 to 100% in horizontal.

Other scales, in volume, consult Parker Hannifin.

Scaling factors:

10% to 100% range. Fully adjustable.

Lamp intensity:

4mcd each.

Front viewing:

Polarised.

Weight:

29gms.

Oilcheck

Hand-held Oil Condition Monitor

Portable and battery powered for 'go-anywhere' monitoring

Hand-held condition monitor provides a visual comparison between new and used oils

Parker's Oilcheck is completely portable and battery powered with a numerical display that indicates positive or negative increase in dielectrics. Oilcheck gives an early warning of impending engine failure and the simplistic hand-held design makes it easy to use.

Oilcheck shown with optional rubberized sleeve.

Contact Information:

Parker Hannifin
Hydraulic Filter Division Europe

European Product Information Centre
Freephone: 00800 27 27 5374
(from AT, BE, CH, CZ, DE, EE, ES, FI, FR, IE, IT, PT, SE, SK, UK)
filtrationinfo@parker.com

www.parker.com/hfde

Product Features:

- Oilcheck hand-held condition monitor provides a visual comparison between new and used oils.
- The Oilcheck, once calibrated with clean oil, will store the calibration units memory when the unit is switched off, until such time that a re-calibration is required by the user.
- Completely portable and battery powered.
- Numerical display shows positive or negative increase in dielectrics.
- Gives early warning of impending engine failure.
- Optional protective rubberized sleeve.

Oilcheck

Hand-held Oil Condition Monitor

Features & Benefits

- A comparator between new and used oils.
- Oilcheck gives early warning of impending engine failure.
- Cost effective solution to save money and help increase engine life.
- Completely portable, battery powered.
- Ideal for fleet owners, garages and DIY mechanics.
- Numerical display to show positive or negative increase in dielectrics.

Using Oilcheck

Following the simple sampling procedure, Parker's Oilcheck will ensure effective and highly repeatable results. Once a clean oil sample has been placed in the 'Sensor Well' and the 'TEST' button has been pressed, the instrument will 'zero' on the sample.

Once cleaned out with a degreaser and replaced by a contaminated sample, a new reading is obtained on the LCD, which can be easily compared against the green/amber/red efficiency scale.

Typical Applications

- Fleet owners
- Construction equipment maintenance
- Vehicle service garages
- Plant hire maintenance

The Oilcheck from Parker Filtration's Condition Monitoring Centre detects and measures the dielectric constant of oil, by comparing the measurements obtained from used and unused oils of the same brand.

Used as a regular service monitoring instrument, the Oilcheck will give the engineer warning of an impending engine failure and promote increased engine life. Oilcheck is the low-cost solution that will take the guesswork out of oil changes, saving money and time.

Specification

Case construction:
ABS.

Circuitry:
Microprocessor control.

Battery:
1 x 9V alkaline (supplied).

Display:
LCD.

Suitable oil types:
Mineral and synthetic based oils.

Repeatability:
Better than 5%.

Readout:
Green/amber/red grading, Numerical value (0-100%).

Battery lifetime:
>150 hours or 3,000 tests.

Dimensions:
250mm x 95mm x 34mm (9.8" x 3.7" x 1.3").

Weight:
0.4kg.

Memory capacity:
Remembers the last calibration.

Using Oilcheck

Green/amber/red
numerical value

Function
buttons

The Oilcheck can remove the need for costly and time consuming laboratory analysis of mineral and synthetic oils used in engines, gearboxes and bearing lubrication systems. It detects mechanical wear and any loss of lubricating properties in the oil with a repeat accuracy of less than 5%.

The Oilcheck is able to show changes in the oil condition brought about by the ingress of water content, fuel contamination, metallic content and oxidation.

icountACM20 Lab Unit

Aviation Fuel Contamination Monitoring

Note: For information on icountPD for aviation fuels see page 436

A unique product with pedigree

DEFSTAN 91-91 Issue 6 Jet A-1 Fuel Specification, adopts particle counting.

Development work carried out by the CMC engineers, in conjunction with Exxon Mobil Aviation, highlighted the need for an alternative test method to determine the levels of dispersed contamination in Jet fuel. 5 years of field testing and development of the already established and successful icountLCM20 Hydraulic Laser Particle Counter saw the introduction of the Parker icountACM20 with enhanced software providing the user with a better understanding of the contamination present in a sample. As the benchmark particle counter for use in measuring the levels of contamination in fuels, the icountACM20, as per the UK's Energy Institute Test Method IP564, has now been included in the DEFSTAN 91-91 Issue 6 Jet Fuel Specification as a report only test alongside the current Gravimetric test method (IP423 or ASTM D5452) and Clear & Bright Visual test method (IP216 or ASTM D2276)

- Energy Institute Test Method IP 564.
- 2-minute test procedure.
- Fully manufactured by Parker with 20 years experience in the Particle Counter Measuring market.
- Laser optical scanning analysis.
- Multi-standard ISO cleanliness reporting.
- On-board, rear-mounted pump enables monitoring possibilities. For example: Fuel storage/ vehicle tanks and fuel storage drums.
- Latest averaging software as standard.
- Downloader software.

icountACM20 Lab Unit

Aviation Fuel Contamination Monitoring

Features & Benefits

Test Time:

2 minutes

Repeat Test Time:

Every 2 minutes (Manual testing), every 6 minutes (automatic)

Principle of Operation:

Optical scanning analysis and measurement of actual particles and inference to water presence

Primary Output:

$\geq 4\mu(c)$, $\geq 6\mu(c)$, $\geq 14\mu(c)$, $\geq 21\mu(c)$, $\geq 25\mu(c)$, $\geq 30\mu(c)$ counts per ml

Secondary Diagnostic Output:

% Volume Distribution, via graphical display on handset and printout

International codes:

ISO 7-22 in accordance with ISO 4406-1999

Data entry:

32 character two line dot matrix LCD. Full alpha numeric entry facility on keypad

Data retrieval:

Memory access gives test search facility for up to 300 saved tests

Calibration:

In accordance with Parker Calibration Procedure CM20-N, which complies to ISO11171:1999, Clause 6 (Omitting Annex F)

Re-calibration:

Every 12 months by a dedicated Parker Service Centre (Consult Parker) as required under strict EI methods

Max. working pressure:

420 bar

Operating Temperature:

+5°C to +80°C

Memory store:

300 test capacity

Computer compatibility:

Interface via RS 232 connection @ 9600 baud rate (USB serial cable to RS232 option available)

Laboratory sampling:

Utilizes on-board rear mounted pump

Portability:

Only 8 kg. icount ACM20 has its own battery pack and carry case with wheels 13kg total weight

Power requirement:

12vDC input, 6 x 'D' Cell batteries or rechargeable battery pack

Printer facility:

Integral 16 column printer for hard copy data

Certification:

Complies with all relevant EC declarations of conformity

icount ACM20 Case Mounted Pump

- Integrated Pump assembly incorporated onto the ACM20 unit.
- Powered directly from ACM20 unit, LED power indication with no additional power supplies required.
- Direct sampling from fuel sample bottles or tank via 3 metre inlet suction tube.
- Incorporated double speed flush and test sequence.
- Managed flow rate/correct volume sample as per IP 564 test method.

FACT: icountACM20 is fully compliant with the EI (Energy Institute) test method

Applications

The Parker icountACM20 Portable Particle Counter has been developed from existing technology for monitoring contamination in AvTur and other hydrocarbon fuels, in accordance with the Energy Institute (EI) Method IP 564.

In addition, the ACM can also be used to monitor various fuels from existing sampling points in locations from refineries, pipelines, distribution terminals, airport fuel supply systems all the way through to the point of uplift into aircraft*.

* Hot works permit required for online sampling (ATEX Zone 2 unit available). Page 478.

- **Fuel Testing Laboratories – DEFSTAN 91-91 Issue 6**

In order to better understand dispersed contamination in jet fuel, particle counting is now included alongside existing laboratory techniques

- **Bottle Sampling - Energy Institute (EI) - IP 564**

Laboratory determination of the level of dispersed contamination in aviation kerosine using an Automatic Particle Counter (APC)

- **Replace Clear & Bright and Gravimetric**

With the introduction of the icount ACM20, all subjectivity surrounding Clear & Bright and Gravimetric methods can be removed

- **Also for use on petroleum based hydraulic applications (Skydrol compatible available)**

Suitable for use with mineral oil and petroleum based fluid as per standard hydraulic particle counter, reporting fluid cleanliness to ISO 4406:1999

Specification

Construction:

ABS structural foam and injection moulded case
Hand-held display - ABS
Keypad fluorosilicone rubber

Mechanical Components:

Brass, plated steel, stainless steel and aluminium

Seals:

Fluorocarbon

Hoses:

Nylon (Kevlar braided microbore). St. steel armoured ends

Flow Rate:

25 - 28ml/min (dictated by CMP) 100ml/min with additional flush button

Fluid Compatibility:

Hydrocarbon Fuel, Mineral Oil. For other fluids consult Parker

Fuse:

1.25 amp fast blow fuse included for overload protection (spare supplied)

icountACM20 Technology:

Flow cell, light obscuration

Repeatability/Accuracy:

As per or better than ISO 11171

Coincidence:

40,000 particles per ml

Viscosity Range:

1 -100 centistokes

icountACM20 Weight:

8 kg

Monitor Carrying Case:

Astra Board case

Carrying Case Weight:

5 kg

icountACM20 - rear view

Input Power Socket (note that you will have to remove the plastic dust cap to access the 12Vdc power socket).

A fast blow 1.25A fuse and the RS232 connection are located behind the removable cover plate. The RS232 interface is provided to download all test data stored in the instrument. See the **ParSmart Downloader** software for more information.

Note 3: Selected spare parts - for a full list contact Parker.

* Hot works permit required for online sampling.

Field Monitoring - icountACM202022

For use in non-hazardous areas, the icountACM202022 is designed for online sampling of hydrocarbon fuels and hydraulic systems, utilising existing "quick connect" sampling points such as the Millipore Adaptor.

icountACM20 Lab Unit

Aviation Fuel Contamination Monitoring

DEFSTAN 91-91 Issue 6
Defence Standard 91-91 is the specification for aviation turbine fuel, which the United Kingdom Civil Aviation Authority (CAA) has agreed is under the technical authority of the Director of the Defence Fuels Group.

IP 564

Laboratory determination of the level of dispersed contamination in aviation kerosene using an Automatic Particle Counter (APC). This standard describes a method for determining the level of dispersed contamination in aviation kerosene fuels, specifically dirt particles and water droplets in the range from $\geq 4\mu(c)$ to $\geq 30\mu(c)$. This method relates specifically to Aviation fuels but the equipment can be used on all fuels, petroleum and mineral based fluids.

Note:

The mandatory implementation date for IP 564 test method "Determination of the level of cleanliness of aviation turbine fuel - laboratory automatic particle counter" was July 1st 2009. It is the specification authorities intention to replace current test methods with particle counting at the earliest opportunity.

IP 564 Procedure

Step 1

The apparatus shall be set up in accordance with Parker's operating instructions.

Step 2

Test Portion Preparation:

Decant a minimum of 450ml of the field sample into a clean test portion container.

Step 3

Prior to starting a test, tumble the test portion end over end for 60 seconds to ensure any settled particles are redistributed.

Step 4

Turn on the Case Mounted Pump and flush for 60 seconds. Do not press the fast flush button. While flushing, enter the test identifier (see manual).

Step 5

Following the flush, start a test by turning the blue valve in the direction indicated. Perform a further 3 tests. (4 in total).

icountPD Z2

ATEX Approved Online Particle Detector

For use in explosive and hazardous areas

The icountPD Particle Detector from Parker represents the most up to date technology in solid particle contamination analysis. This compact, permanently mounted laser-based ATEX approved particle detector module is designed for use in Zone 2 areas and is housed in a robust Stainless Steel IP69K approved enclosure that provides a cost effective solution to fluid management and contamination control.

Contact Information:

www.parker.com/hfde

Product Features:

- Independent monitoring of system contamination trends.
- Assembled in an approved and certified Stainless Steel enclosure to comply with ATEX Directive 94/9/EC.
- Can be used in explosive and hazardous areas.
- ATEX Zone 2.
- Certified to CE Ex II 3GD, Ex nA IIC T4 Gc, Ex tc IIIC Dc SIRA 09ATEX4340X and IECEx SIR 09.0137X (-30°C < Ta < +60°C).
- Moisture & %RH indicator (optional).
- Warning limit relay outputs for low, medium and high contamination levels.
- Continuous performance for prolonged analysis.
- Self diagnostic software.
- Full PC/PLC integration technology such as:- RS232 and 0-5Volt, 4-20mA, CAN(J1939) (Contact Parker for other options).
- Set up and Data logging support software included.

icountPD Z2

ATEX Approved Online Particle Detector

Features & Benefits

Diagnostic Self Check Start-up Time:

Customer selectable 5-900 seconds

Measurement Period:

5 to 180 seconds

Reporting interval through RS232:

0 to 3600 seconds

Limit Relay Output:

Changes occur +/- 1 ISO code at set limit (Hysteresis ON) or customer set (Hysteresis OFF)

Particle / % RH Output Signal:

Continuous

Principle of operation:

Laser diode optical detection of actual particulates.

Reporting Codes:

ISO 7 – 21, NAS 0 – 12, (AS 00 – 12 Contact Parker)

icount will also report less than ISO 7, subject to the statistical uncertainty defined in ISO4406:1999, which is shown in the RS232, reporting results as appropriate e.g ">6"

Calibration:

By recognised on-line methods, confirmed by the relevant International Standard Organisation procedures.

Calibration Recommendation:

24 months

Performance:

+/- 1 ISO Code (Dependant on stability of flow)

Reproducibility / Repeatability:

Better than 1 ISO Code

Power Requirement:

Regulated 9 to 40Vdc

Maximum Current Draw:

150mA

Hydraulic Connection:

Size: 066

Connection: EO 24 cone end

Required Flow Range through the icountPD:

40 to 140 ml/min (Optimum Flow = 60ml/min)

Online Flow Range via System 20 Inline Sensors (Hydraulic systems only):

Size 0 = 6 to 25 l/min - (Optimum Flow = 15 l/min)

Size 1 = 24 to 100 l/min - (Optimum Flow = 70 l/min)

Size 2 = 170 to 380 l/min - (Optimum Flow = 250 l/min)

Required Differential Pressure across Inline Sensors:

0.4 bar (Minimum)

Viscosity Range:

1-500 cSt

Temperature:

Operating Environment -30°C to +60°C (-22°F to +140°F)

Storage -40°C to +80°C (-40°F to +176°F)

Operating Fluid +5°C to +80°C (+41°F to +176°F)

Working pressure:

2 to 420 bar (30-6000 PSI)

Moisture sensor calibration (Not offered with the fuel version):

±5% RH (over compensated temperature range of +10°C to +80°C (+50°F to +176°F))

Operating humidity range:

5% RH to 100% RH

Moisture sensor stability:

±0.2% RH typical at 50% RH in one year

Certification:

IP69K rating

EMC/RFI – EN61000-6-3:2007

EN61000-6-2:2005

Materials:

Stainless Steel case construction.

Stainless Steel hydraulic block.

Dimensions:

260mm x 114mm x 110mm

Weight:

2.6kg

Seals:

Fluorocarbon seals.

Product Features:

- Assembled in an approved and certified stainless steel enclosure to comply with ATEX Directive 94/9/EC.
- Can be used in explosive and hazardous areas, including offshore and mining applications.
- ATEX Zone II
- Certified to CE Ex II 3 G Ex nR/nL IIC T6
- “A” Class product defined for the Aviation market.
- ATEX approved Handset and keypad.
- Suitable for use with mineral oil and petroleum based fluid as per ACM20/LCM20 particle counters.

icountACM20 Z2

ATEX Approved Portable Particle Counter

Features & Benefits

Test Time:

2 minutes.

Repeat Test Time:

Every 2 minutes (Manual testing) Every 6 minutes (Automatic).

Principle of Operation:

Optical scanning analysis and measurement of actual particles and inference to water presence.

Primary Output:

$\geq 4\mu(c)$, $\geq 6\mu(c)$, $\geq 14\mu(c)$, $\geq 21\mu(c)$, $\geq 25\mu(c)$, $\geq 30\mu(c)$ counts per ml.

Secondary Diagnostic Output:

% Volume Distribution, via graphical display on handset.

International codes:

ISO 7-22 in accordance with ISO 4406-1999

Data entry:

32 character two line dot matrix LCD. Full alpha numeric entry facility on keypad.

Data retrieval:

Memory access gives test search facility for up to 300 saved tests.

Calibration:

In accordance with Parker Calibration Procedure CM20-N, which complies to ISO11171:1999, Clause 6 (Omitting Annex F).

Re-calibration:

Every 12 months by a dedicated Parker Service Centre (Consult Parker).

Max. working pressure:

420 bar.

Operating Temperature:

+5°C to +80°C

Memory store:

300 test (scrolling memory) capacity.

Computer compatibility:

Interface via RS 232 connection @ 9600 baud rate.

Portability:

15 kg. ACM20 has its own battery pack and carry case with wheels.

Power requirement:

Rechargeable battery powered or via the 12vDC input.

System connection:

Via Millipore adaptor with flow restriction through supplied needle valve.

Certification:

Complies with all relevant EC declarations of conformity.

Printer facility:

No printer. Data download only.

icountACM20 2032 technology:

Unique optical scanning system

Using icountACM20 Z2

icountACM20 Z2 is designed to be used to monitor various fuels from existing sampling points in hazardous locations from refineries, pipelines, distribution terminals, airport fuel supply systems all the way through to the point of uplift into aircraft. With Zone II classification, the icountACM20 Z2 is the worlds **only** ATEX approved particle counter.

Applications in Fuels

- **Oil Refinery**
 - To count and verify the levels of dispersed contamination in accordance with specification limits. (Consult Parker CMC).
- **Distribution Terminals/Hubs**
 - For use on receipt and outbound supply. Also to provide filtration performance, tank cleanliness and product quality checks.
- **Storage**
 - Settling times can be reduced by monitoring with the ACM by ensuring that levels of dispersed contamination are below acceptable levels.
- **Airport Fuel Farm**
 - Monitoring of fuels into storage, through the fuel farm, hydrant system and during uplift into wing.
- **Pipeline Commissioning**
 - Fast real time monitoring of pipelines following pigging and cleaning processes.
- **Oil and Gas Platforms**
 - Used to monitor the filtration performance, system cleanliness and quality of delivered product.

Applications in hydraulics

OFFSHORE

Solutions in the offshore industry.

In addition, the icountACM20 Z2 can be used in many hydraulic system applications as detailed below.

In many industries, worker awareness needs to be maintained at a high level to ensure the safety of their operation. This is particularly relevant to offshore oil-drilling and gas-drilling crews, given the interactive and hazardous nature of their work. The Zone II ACM portable particle analyser is a tried and tested technology designed, proven and approved as a fluid contamination monitor that crews are using and trusting in such hazardous and demanding environments.

- Certified to CE Ex II 3 G Ex nR/nL IIC T6
- Can be used in explosive and hazardous areas, including Offshore and Mining.
- Primary Output. Six cumulative particle size channels ranging from $\geq 4\mu\text{m}(c)$ to $\geq 30\mu\text{m}(c)$ and numbers per ml in accordance with ISO4406-1999.

REFINERIES

icountACM20 Z2 – operational in oil refineries and fuel fields.

Already operational in oil refineries and designed to be used inside commercial airfield fuel locations and at the point of upload of fuel into the aircraft, icountACM20 Z2 has an impressive success record in this approval sensitive area of operation.

With a number of safety features designed in as operational standards, the icountACM20Z2 can be taken to the point of use, connected in moments and reporting in little more than 2 minutes to ISO approved standards.

- Assembled in an approved and certified stainless steel enclosure to comply with ATEX Directive 94/9/EC and EN50 021 requirements.
- 'A' Class product defined for the aviation market.
- Designed for on-line operation, connecting to the process line via existing Millipore™ fittings, already in use for other industry equipment.

QUARRYING

Applications in other hazardous environments.

- Railroad equipment manufacturer - Warranty protection.
- Power generation stations - Preventative maintenance.
- Mobile equipment - Roll-off cleanliness testing.
- Mining operations - Service tool.
- Steel mills - Preventative maintenance.

icountACM20 Z2

ATEX Approved Portable Particle Counter

Average Particle Counts in AV System

The table below gives estimated counts found in a typical aviation fuel distribution system, and is given as guidance, in which API/EI filtration equipment is installed.

Receipt into Microfilter
Expect 2,500 counts per ml
or cleaner @ 4μ(c)

Receipt into FWS (After MF)
Expect 500 counts per ml
or cleaner @ 4μ(c)

Receipt into Storage (After FWS/MF)
Expect 100 counts per ml
or cleaner @ 4μ(c)

FWS out of storage
Expect 500 counts per ml
or cleaner @ 4μ(c)

After FWS into Hydrant
Expect 100 counts per ml
or cleaner @ 4μ(c)

After Monitor Into Aircraft
Expect 100 counts per ml
or cleaner @ 4μ(c)

Note: Figures will vary from location to location.

Key: MF=Microfilter (API/EI 1590)

FWS=Filter Water Separator (API/EI 1581)

Receipt into Microfilter		ISO Code - 4406 1999
	High Count	High Count Code
≥4μ(c)	2,500	18
≥6μ(c)	350	15
≥14μ(c)	10	10

Receipt into FWS (After MF)		ISO Code - 4406 1999
	High Count	High Count Code
≥4μ(c)	500	16

≥6μ(c)	10	10
≥14μ(c)	1	7

Parker Kittiwake

Condition Monitoring Products

On-line and On-site solutions for condition monitoring of critical plant and machinery.

Parker Kittiwake condition monitoring equipment and predictive maintenance systems:

Parker Kittiwake sensors and equipment facilitate rapid, informed decision making, allowing the user to manage risk, reduce downtime, optimize efficiencies and maximize profit.

Contact Information:

Parker Hannifin
Hydraulic Filter Division Europe

European Product Information Centre
Freephone: 00800 27 27 5374
(from AT, BE, CH, CZ, DE, EE, ES, FI, FR, IE, IT, PT, SE, SK, UK)
filtrationinfo@parker.com

www.parker.com/hfde

Product Features:

- The Parker Kittiwake fdMplus provides instantaneous metallic wear debris results for immediate machine condition assessment.
- Parker Kittiwake DIGI Field Test Kits give Lab grade accuracy in a field deployable test kit.
- The Parker Kittiwake Low Range DIGI Water Test Kit provides simple, accurate results for water in oil.
- The Parker Kittiwake MHC Bearing Checker is a simple to use, entry level AE device.
- The Heated Viscometer from Parker Kittiwake provides laboratory grade oil viscosity results in minutes.

MHC Bearing Checker

The MHC Bearing Checker is a new, unique hand-held instrument, providing maintenance engineers with an easy to operate, simple to use and quick method of analysing bearing condition and lubrication state.

The MHC-Bearing Checker monitors high frequency Acoustic Emissions (AE) signals naturally generated by deterioration in rotating machinery. The unique way of detecting and processing these signals gives you condition-related information in the easiest possible form. It is a state-of-the-art Condition Monitoring instrument with extreme sensitivity to developing faults.

How does it work?

As the mechanical condition of machinery deteriorates, energy loss processes such as impacts, friction and crushing, generate sound wave activity that spans a broad range of frequencies.

By detecting only the high frequency part of this signal with special AE sensors, it is possible to detect minuscule amounts of activity (e.g. a slight rub, a brief impact or the crushing of a single particle in the lubricant). The patented MHC sensor gives improved repeatability and is remarkably rugged. A magnetic front face allows easy attachment to multiple machines.

Easy to use and interpret parameters for quick analysis

Simply attach the unit via the magnetic sensor head and within 10 seconds, both dB Level and Distress[®] values will be displayed. dB Level is an indication of the overall noise of the bearing and is dependent on speed. It increases with speed of rotation, but also with degradation of the bearing or inadequate lubrication. Distress[®] gives an instant indication of the state of the bearing's health. A reading below 10 generally indicates normal operation, higher than 10 is usually indicative of bearing damage or the need for attention.

Distress[®] and dB Level are the fundamental parameters of the high-end MHC-Memo products and are trusted by thousands of maintenance engineers and technicians worldwide.

These are now available in a low cost, easy to interpret pocket size instrument.

The unit is powered by an internal rechargeable battery, offering up to 1000 measurements between charges. Recharging is accomplished through a micro USB port and the unit can be connected to any standard PC USB port for ease of recharging. Can you afford not to equip all of your maintenance staff with a unit?

Specifications

Sensor	
Sensing element	Resonant piezoelectric at ~ 100 kHz
Calibration	Factory set

Signal Measurement	Description	Range	Resolution
Distress [®] (dst)	Fault indicating parameter	0 to 40	1 unit
dB Level (dB)	Logarithmically scaled mean signal level	10 to 80 dB	1 dB

Features	
Display	LCD, 2 lines by 8 characters
Distress [®] Display	Numeric or Text ("OK" if <10, "Suspect" if between 10 & 15, "Poor" if >15)
Reading in progress	Flashing LED indicator (in addition to LCD display message)
Non-Volatile Memory	Shows last taken readings when unit is switched on
Auto Shut-Off	Instrument auto switches off 30 seconds after last button press
Internal Batteries	NiMH rechargeable battery via micro USB port - Typically over 1000 measurements between charges
Operating Temperature	0°C to 65°C
Overall Dimensions	98 mm x 62 mm x 34 mm (including magnetic sensing head)
Weight	225 g

Features and Benefits:

- Last measurement recall
- Simple one-handed operation
- Rechargeable through USB port
- Ease of operation

Target Applications:

- Bearings
- Gearboxes
- Motors
- Pumps

ANALEXfdMplus

The ANALEXfdMplus is a highly accurate instrument designed to measure the contamination of an oil sample with ferrous wear metal particles.

What's new

The ANALEXfdMplus utilises a novel sample adaptor system to measure from any of the following sample media;

- 50ml Bottle
- 10ml Syringe
- 5ml Syringe
- 5ml Test Tube
- 4ml Grease Pots

The ANALEXfdMplus measures un-combined ferrous wear debris in oil or grease samples taken from a variety of types of machinery. Suitable for field and laboratory use, the ANALEXfdMplus provides you with the ability to successfully monitor your equipment, preventing costly machinery downtime.

Contained in a fully portable case, it's rugged design is ideal for testing and analysing oil samples both in the laboratory or in the field. Supplied with an optional 12 V convertor, it is ideal for use in remote locations where full laboratory analysis is not possible. Samples may be presented for measurement in a variety of media, offering you full flexibility of use. Ferrous debris is measured directly from the oil or grease in the sample container, providing you with a quick, simple and clean method of analysis.

Data from each test is stored in the internal memory, which may then be transferred to a host PC via an RS232 interface. Data can then be fully analysed and trends easily monitored by importing into a database.

Features

Supplied with:

Calibration and Check Standards, Power Adaptor, RS232 Connector, Sample Adaptors, Range of Sample Media.

Data entry

Data entry is via a simple and intuitive touch pad screen, with full alphanumeric keypad and backlit graphics display, for clear user prompts and easy viewing of results. The following parameters can be recorded:

- Automatic date and time linked to each equipment or sample number.
- Equipment number or identification.
- Sample number or identification.
- Lubricant Hours (0 - 999999 hrs).

The results are shown in a tabular display and in graphical format to enable trending by machine or equipment number.

Specifications

Product Code:	FGK17144PA
Messaurement Range (approx PPM):	50 ml Bottle 0 - 2500 ppm 10 ml Syringe 0 - 19000 ppm 5 ml Syringe 0 - 34000 ppm 5 ml Tube 0 - 28000 ppm 4 ml Grease Pot 0 - 8000 ppm
Display Resolution:	1 ppm
Sample Media:	50 ml Sample Bottles, 10ml Syringes, 5 ml Syringes & Test Tubes, 4ml Grease Pots
Test Time:	< 1 minute to stabilise from power on < 15 seconds per sample
Power:	110 - 250 VAC autoselected 50/60 Hz
Fuse Rating:	2.5 A 250 VAC HRC A/S T ceramic
Opem Temp. Range:	15 - 40 °C (60 - 104 °C)
Weight:	4.22 kg

Accessories and Consumables

FGK14946PA	x 360 off 50 ml Sample Bottles
FGK15005PA	x 3000 off Grease Pots
FGK17074PA	x 1000 off 5 ml Test Tubes
FGK17075PA	x 500 of 10 ml Syringes
FGK17076PA	x 500 off 5 ml Syringes

Heated Viscometer

Make fast on-site maintenance decisions with Parker Kittiwake's Heated Viscometer, providing laboratory grade oil viscosity results in minutes.

The Parker Kittiwake Heated Viscometer provides a condition monitoring tool that enables you to make informed operational and maintenance decisions about your critical plant and equipment. Fuel and lubricating oils form a major cost element in the operation of almost all industrial machinery and engines; the quality must be closely monitored to protect the investment. The ability to test on-site, at the point of use, enables engineers and facilities managers to conduct oil analysis quickly and easily. Detecting out-of-spec fuels or lubricants can identify potential problems before equipment damage occurs.

Viscosity is regarded as an oil's most important characteristic. It is the viscosity that shows the oil's resistance to flow and the strength of the oil film between surfaces. Viscosity can increase or decrease as a result of problems such as contamination, fuel dilution and shear thinning. Measurement of viscosity is extremely important for hydraulic oils, diesel engine oils, gears and fuel oils.

The heated viscometer measures at the actual temperature and is designed to 'Tilt' from side to side in both directions, allowing the ball to fall under gravity and the viscosity of the oil calculated automatically.

- Monitoring viscosity gives an early warning for a range of common problems.
- Highly accurate results with three readings are available at 40°C, 50°C or 100°C.
- Test an even greater range of oils, by changing the viscosity index or density.
- Estimate the combustion performance (CCAI) of fuel oil.
- Heavy duty, robust equipment - ideal for long term use with rapid results.

Ordering information

FGK1200PA: Heated Viscometer

Range: Calculated Viscosity at 40 °C, 50 °C and 100 °C, Calculated Carbon Aromaticity Index (CCAI).

Display: 8 Digit LED

Keypad: Membrane type with tactile buttons

Power: 110 to 240 AC 50/60 Hz

Test Kit contains Heated Viscometer, power supply and all consumables in a portable robust metal case.

Low Range DIGI Water Kit

At the heart of Parker Kittiwake's on-site oil test solution range is the DIGI Test Cell, providing simple, accurate results for Water in Oil.

With an easy to read digital display providing instructions and results, a five year (10,000 tests) battery life and built in memory for recording previous test results, the Parker Kittiwake DIGI Cell has become a favoured test method worldwide for on-site and on-board testing.

Water in Oil

Maintain and protect your equipment, whilst eliminating damage caused by water in your oil.

The DIGI Water in Oil Test Kit provides state of the art, digital analysis and gives fast, accurate results for easy monitoring of trends.

- Prevent corrosion, cavitation or failure of your machinery by detecting water in oil, before any damage occurs.
- Minimise instability of additive packages and damaging microbe growth by monitoring your oil.
- Fully portable for use on-board or in the field, test cells are extremely robust, durable and easy to use.

Reagents, Spares and Consumables

Parker Kittiwake test kits for individual parameters contain reagents, consumables and full instructions for multiple tests.

- Replacement reagents can be ordered at short notice.
- Kits contain all necessary equipment for instant test results in the field.
- Reagents are packed in accordance with IATA/IMDG/IRD Air/Marine/Road Transportation codes and can be delivered to major ports world-wide.

Ordering information

FGK17032 PA: Low Range DIGI Water Kit
 FGK2101PA: EasySHIP
 Water in Oil Reagent Pack (50)

Range (LR): 0.02 - 1%, 100 - 3000 ppm, 0 - 10%

Test Time: 3 minutes

Battery Life: Five years (10,000 test)

DIGI Field Kit

A low cost kit allowing multiple oil parameters to be measured in the field including:

Viscosity

The ECON Viscostick gives a simple go / no-go result. Typically it will detect 5-10% distillate fuel dilution of an SAE 30 to 40 engine oil as well as increases in viscosity due to oil contamination.

Total Acid Number (TAN)

Testing for TAN is essential to maintain and protect your equipment, preventing damage in advance.

Measure both the weak organic and strong inorganic acids present within an oil with the Parker Kittiwake TAN Test. A rise in TAN is indicative of oil oxidation due to time or operating temperature.

- Test kit is supplied with up to fifty tests, enabling you monitor TAN level trends.
- Simple to use drop test - the result is shown by a colour change, providing you with easy to interpret results, suitable for use by non-technical personnel.

Insolubles

Monitor combustion related debris and oxidation products.

High insolubles will cause lacquer formation on hot surfaces, sticking of piston rings and wear of cylinder liner and bearing surfaces. The detergent property of the oil will also decrease, speeding further deterioration.

- Detect insolubles from diesel engine combustion products such as fuel ash, carbon, partially oxidised fuel, oil oxidation products and spent lubricant additive.
- Simple and quick to use, the Insolubles tests available give you actionable results, helping prevent engine damage.

Ordering Information - Kit

Water in Oil

Maintain and protect your equipment, whilst eliminating damage caused by water in your oil.

The DIGI Water in Oil Test Kit provides state of the art, digital analysis and gives fast, accurate results for easy monitoring of trends.

- Prevent corrosion, cavitation or failure of your machinery by detecting water in oil, before any damage occurs.
- Minimise instability of additive packages and damaging microbe growth by monitoring your oil.
- Fully portable for use on-board or in the field, test cells are extremely robust, durable and easy to use.

Total Base Number (TBN)

The DIGI TBN Test Kit provides state of the art, digital analysis and gives fast, accurate results for in-depth monitoring of trends.

The ECON TBN Test Kit gives a rapid indication of TBN depletion in lubricants.

- Avoid fouling within the engine and corrosion of engine components by monitoring the Total Base Number (TBN) of your lubricating oils
- Simple, economical monitoring of lubricants

Reagents, Spares and Consumables

Parker Kittiwake test kits for individual parameters contain reagents, consumables and full instructions for multiple tests.

- Replacement reagents can be ordered at short notice.
- Kits contain all necessary equipment for instant test results in the field.
- Reagents are packed in accordance with IATA/IMDG/IRD Air/ Marine/Road Transportation codes and can be delivered to major ports world-wide.

ASIC 'Performer'

Pressure Transducers and Transmitters
25, 60, 100, 250, 400 and 600 bar

One product range, designed for many industry applications

All Stainless Steel Construction

A quality range of transducers and transmitters with pressure ratings - 25, 60, 100, 250, 400 and 600 bar. One-piece body and diaphragm machining ensures long-term stability and an all Stainless Steel construction ensures reliability. A cost-effective solution in many industrial applications.

Product Features:

- A quality range of transducers and transmitters with pressure ratings - 25, 60, 100, 250, 400 and 600 bar.
- One-piece body and diaphragm machining ensures long-term stability.
- All Stainless Steel construction.
- Cost-effective solution in many industry applications.
- 0-5 Volt, 1-6 Volt Transducers.
- 4-20mA Transmitters.
- 1/4 " BSP thread.
- M12 or MicroDIN plug options.

ASIC 'Performer'

Pressure Transducers and Transmitters

Applications for the ASIC Performer

- Fork lift trucks - braking and load systems.
- Truck mounted cranes - load safety systems.
- Earth moving machinery - hydraulic gearbox control.
- Racing car - gearbox, fuel, cooling and suspension systems.
- Water usage systems - pressurised systems for industrial and hi-rise usage.
- Forest Machinery - felling and logging.
- Paper mills - speed control and weighing systems.

The Parker Filtration ASIC Performer Pressure Transducers and Transmitters.

The ASIC Performer offers a wide range of pressure sensors for mobile or industrial applications.

These sensors have been designed for the requirements of industrial instrumentation systems. Accordingly, the housings and all components in contact with the medium are made of stainless steel. Thus giving compatibility with a wide range of media. There is a choice of two plug connectors of either DIN or M12. There are

six measuring ranges available and a choice of outputs in the form of either voltage or current signals. Sensors with output signals from 4...20 mA are available in two wire technology.

The built-in voltage regulator allows the sensors to be operated with a supply voltage of 12-36/9-36 Vdc. All sensors are manufactured in our own production facility, typical of Parker Hannifin's continued commitment to flexibility and quality.

The Complete Performer range utilises ASIC technology (Application Specific Integrated Circuit) programmable software.

A comprehensive range of Pressure Transducers and Transmitters are available from Parker Filtration.

- One-piece body and diaphragm machining ensures long-term product stability.
- All stainless steel construction.
- 6 transducer pressure ratings with 0-5Vdc and 1-6Vdc outputs.
- 6 transmitter pressure ratings with a 2-wire 4-20mA output.
- Microdin plug and M12 connector options.

AC/DC display unit (DDU10012 or DDU1002)

Specification

Pressure ranges:
25, 60, 100, 250, 400, 600 bar.

Pressure Tolerance Specifications:

Rating	Maximum Overload Pressure	Maximum Burst Pressure
25	x 2 (50 bar)	x 3 (75 Bar)
60	x 2 (120 Bar)	x 3 (180 Bar)
100	x 2 (200 bar)	x 3 (300 Bar)
250	x 2 (500 Bar)	x 3 (750 Bar)
400	x 2 (800 Bar)	x 3 (1200 Bar)
600	x 2 (1200 Bar)	x 2.5 (1500 Bar)

Vibration resistance:
IEC 60068-2-6:
+/- 5mm/10Hz...32Hz
200m/s² / 32Hz...2kHz

Installation:
Spanner size 22A/F.
Max. (recommended) tightening torque = 30Nm.

Weight:
200 - 230g

Lifespan:
10 million cycles

Thread Forms

G¹/₄ (1/4BSP) with ED seal.
All thread forms and sensor interface are made from 1.4301 stainless steel.
Non standard threads - contact Parker CMC

Electrical

Supply voltage	Output
12 - 36Vdc	0 - 5Vdc
12 - 36Vdc	1 - 6Vdc
9 - 36Vdc	4 - 20mA

Transducer current draw = <6mA
Load impedance (ohm) = >10K
Output signal noise = 0.1%FS

Product Performance

Linearity:
Typical: 0.3%FS.
Max: 0.6%FS.

Hysteresis:
Typical: 0.1%FS.
Max: 0.25%FS.

Repeatability:
Typical: 0.2%FS.
Max: 0.4%FS.

Functional temp range:
-40°C to +85°C.

Compensated temperature:
-20°C to +85°C.

Stability:
<0.1%FS/a (typ).

Response time:
= <1mS.

- Easiflow meters and Flowswitches. Work in any plane. Flows from 1 to 150 l/min.
- Dataflow 4-20mA and pulse output flow transmitters and Dataflow Compact inline flow transmitter.
- Flowline oil, water and air calibrated flowmeters and flowswitches available in brass or Stainless Steel.
- Hydraulic Test Units for the speedy diagnosis of hydraulic circuit faults with flow ranges from 2 to 360 l/min.

LoFlow - Oil and Water Flowmeters

Flowmeters

Features & Benefits

- Easy to read, permanent printed scales.
- Large scale definition for precise measurement.
- Easy panel mounting assembly.
- Negligible pressure drop characteristics.
- 10 bar pressure rating.
- Simple to use.

Specification

Construction:
 Body Grillon TR55.
 Back body half ABS 7020.
 Ball retainer ABS 7020.
 Back panel PVC.
 Float See below.

Maximum working pressure:
 10 bar.

Maximum working temperature:
 60°C.

Accuracy:
 ±2% typical.

Repeatability:
 ±1%.

Connections:
 1/4" and 3/4" tapered threads.

Note: Always install vertically.

Installation Details

Simple to fit, easy to use

The LoFlow meter has been designed for those industries where the need exists for a low cost solution to small measurements of flow with an accurate reading. LoFlow uses the well tried and tested principle of variable area flow measurement utilising the movement of a ball or float inside a calibrated tapered bore.

Typical Applications

Pharmaceutical industry
 Filtration systems
 Hospital equipment
 For water applications
 Water treatment
 Photography and X-ray
 Equipment
 Swimming pools

Easiflow - Meters and Flowswitches

Flowmeters

Features & Benefits

- Oil and water calibrated.
- Works in any plane.
- Pressures up to 10 bar.
- Flows from 1 to 150 l/min.
- Accuracy $\pm 5\%$ FSD.
- Repeatability $\pm 1\%$ FSD.
- Switches – fully adjustable flow rate signalling.
- Plant and equipment protection.

Easiflow Meters Specification

Construction:

Cone	Acetal
Viewing glass	Borosilicate glass
Calibrated spring	Stainless steel
Seal	Nitrile
Body	Glass filled nylon

Maximum working pressure:
10 bar.

Minimum working pressure:
1 bar.

Temperature range:
+5°C to +80°C - Oil.
+5°C to +60°C - Water.

Flow rate:

1 to 150 l/min.

Viscosity range:

10 to 200 centistokes (oil).

Accuracy:

$\pm 5\%$ FSD.

Repeatability:

$\pm 1\%$ FSD.

Connections:

1" BSP parallel threads.

Weight:

0.4kg.

Flowswitch Specifications

The Easiflow switch is a flow measuring device incorporating an AC/DC switch suitable for controlling valves or pump motors or for activating alarm signals.

General flowmeter specification:

See material details opposite.

Switch type specifications:

Magnetically operated reed switch.

Electrical details:

Voltage range	300Vac/dc
Maximum current	2.5Amps
Maximum load	100W resistive 70W inductive

Dataflow - 4 to 20mA and Pulse Output Flow Transmitters

Flowmeters

Features & Benefits

- 4 to 20mA output.
- Pulse output available for totalising/batching.
- Works in any plane.
- Accepts reverse flow.
- Maximum flow 150 l/min.
- Negligible pressure drop.
- Pressures up to 10 bar.
- Low cost. Simple to install.
- For use with most liquids.
- Factory calibrated. Accuracy $\pm 2\%$.
- DIN 43650 plug connection (included).

Specification

Construction:

Borosilicate glasstube.
Nitrile seals.
Body – Glass filled nylon.
Rotor and locater – Acetal.
Washers and shaft – Stainless steel.
Rotor tips – Stainless steel.

Max. working pressure:
10 bar oil/water.

Flow indication:

Min: 2 l/min.
Max: 150 l/min.
Accepts reverse flow.

Accuracy:

$\pm 2\%$ FSD.

Temp range:

+5°C to +80°C oil.
+5°C to +60°C water.

Connections:

1" BSP parallel threads.

Weight:

0.7Kg.

Calibration 4 to 20mA:

4mA = 0 l/min,
20mA = 100 l/min.

Calibration pulse output per litre:

'K' factors.
Oil = 51.14
Water = 44.25

Electrical details 4 to 20mA:

Supply = 24Vdc.

Pulse output:

Supply = 24Vdc.
(open collector transistor).

Dataflow 4-20mA transmitter can be connected to a Digital Display Unit (DDU1001 or DDU1002)

Digital Display Specification (DFT 990 only)

For indicator options please refer to MS150 section of the catalogue, reference DDU1001 and DDU1002 indicators

4 to 20mA On-Site Calibration

Set your system to zero flow. Connect a multimeter across terminals 1 (+20mA) and \ominus (0mA) (Dia. 2). Set the zero to read 4mA on your multimeter (Dia. 1). Set your system to full flow and set the span to read 20mA on your multimeter. (Dia. 1)

Note: Minimum span setting = 30 l/min

Diagram 1

Diagram 2

Dataflow Compact - Inline Flow Transmitter

Flowmeters

Features & Benefits

- Pulse output signal for flows up to 25 l/min.
- Lightweight and robust.
- Operates in any plane. Simple to install.
- Low cost flow measurement.
- Negligible pressure drop.
- Accepts reverse flow.
- 3/8 BSP male connection.
- Water or compatible clear fluids only.
- Ideal for washing machines, showers and vending machines.

Specification

Construction:

Body Grilamid – TR55.
Rotor 18% PTFE filled nylon.
Shaft Stainless steel.
Shaft Retainers Grilamid TR55.

Operation:

Infra-red.

Maximum working pressure:
20 bar.

Pressure drop:
Max 0.1 bar at 15 l/min.

Flow range:
1 to 25 l/min.
(Accepts reverse flow).

Calibration:
'K' Factor 752 pulses per litre, typical.
Subject to application.

Accuracy:
±2% typical.

Repeatability:

±1%.

Temperature range:
+5°C to +70°C.

Overall dimensions:
52mm x 29mm x 27mm.

Weight:
16 grams.

Connections:
3/8 BSP

Cable length:
300mm.

Power supply:
5 Vdc.

Output signal:
5 Vdc - square wave

Dataflow Compact – The Low Cost Transmitter

The Dataflow Compact Transmitter was designed to offer OEM's and end users alike a means of monitoring low flows on liquids with an electronic output signal – but at LOW COST. Fluid passes through the one piece sensor body impacting on the twin vaned turbine rotor, causing it to rotate at a speed proportional to the flow rate. Two opposing photo-transistors are mounted either side of the rotor and externally of the clear sensor body, these generate a continuous signal.

As the rotor spins each blade obscures the infra red signal. This is then converted into an industry standard pulse output signal – compatible with inexpensive display units for flow rate, totalising, batch control and large, central control systems. The lightweight Grilamid body with its virtually unrestricted flow path, offers negligible pressure drop for flows up to 25 l/min and withstanding pressures up to 20 bar.

Flow Rate • Totalising • Batch Control and applications in many industries

Dataflow Compact Transmitters are small and very robust having been developed and tested extensively in industry applications where space is a restriction. Dataflow Compact with its Grilamid body and BSP connections can be installed almost anywhere and once installed will give accurate and reliable output signalling.

Installation Details

Red wire +5V supply
Green wire Output signal
Blue wire 0V supply

Flowline - Oil and Water Calibrated Flowmeters (Brass Version)

Flowmeters

Features & Benefits

- Works in any plane.
- Pressure up to 350 bar (5000 psi).
- Flows up to 360 l/min.
- Accuracy $\pm 5\%$ FSD.
- Repeatability $\pm 1\%$ FSD.
- Direct reading.
- Relatively insensitive to viscosity changes.
- Oil or water calibrated.
- Optional reed switch upgrade.

Specification

Construction: Brass body to BS 2874 CZ114.	Viscosity range: 10 to 200 cSt (oil).
Maximum working pressure: Up to 350 bar.	Accuracy: $\pm 5\%$ FSD.
Minimum working pressure: 1 bar.	Repeatability: $\pm 1\%$ FSD.
Temperature range: Brass -20°C to $+90^{\circ}\text{C}$.	Min. scale reading: 10% FSD.
Calibration:	Connections: BSP parallel threads.
Oil Specific gravity 0.856 at 20°C .	Wetted/non-wetted parts: Consult Parker for information.
Water Specific gravity 1.0 at 20°C .	

1/4", 1/2" and 3/4" BSP thread options
(1 1/4" version on next page)

Note: To add an electrically operated reed switch to your flowmeter please order B26307

Flowline - Oil and Water Calibrated Flowmeters (Stainless Steel)

Flowmeters

Features & Benefits

- For flow measurement of corrosive or chemical media or in harsh locations.
- Manufactured in stainless steel 316.
- Works in any plane.
- Pressure up to 350 bar (5000 psi).
- Flows up to 360 l/min.
- Accuracy $\pm 5\%$ FSD.
- Repeatability $\pm 1\%$ FSD.
- Direct reading.
- Oil or water calibrated.
- Optional reed switch upgrade.

1 1/4" BSP option
(1/4", 1/2" and 3/4" on previous page)

Specification

Construction:
Stainless steel to BS 970 316S.

Maximum working pressure:
Up to 350 bar.

Minimum working pressure:
1 bar.

Temperature range:
-20°C to +105°C.

Calibration:
Oil Specific gravity
0.856 at 20°C.
Water Specific gravity
1.0 at 20°C.

Viscosity range:
10 to 200 cSt (oil).

Accuracy:
 $\pm 5\%$ FSD.

Repeatability:
 $\pm 1\%$ FSD.

Min. scale reading:
10% FSD.

Connections:
BSP parallel threads.

Wetted parts:
Body, thread adaptor

Piston, etc: cone locknut:
Stainless Steel.

Flow cone:
BS 970 316S 16.

Magnet encapsulation:
Stainless steel BS970/1:1991.
:316S31.

Spring:
Stainless steel to BS 2056 EN 58J.

Seal:
Fluoroelastomer.

Note: To add an electrically operated reed switch to your flowmeter please order B26307

Flowline - Flowswitches

Flowmeters

Features & Benefits

- ‘Boxed’ two-switch type.
- Intrinsically safe versions (supplied complete with flowmeter).
- Maximum/minimum switching models.
- Maximum working pressure 350 bar. (min 1 bar)
- Flows from 2.0 to 110 l/min.
- Stainless steel – suitable for corrosive fluids.
- Stainless steel to BS970 316516.

Ordering Information

To order the required switching unit, simply add the appropriate prefix before the part numbers shown below.

Standard products table

Product number	Supersedes	Description	Switch Range (Typical)
FS643222112	FS.643 222 112	2 switches, 2 - 20 l/min (1/2 BSP) Oil	2 -12 l/min and 10-20 l/min
FS643222212	FS.643 222 212	2 switches, 5 - 46 l/min (1/2 BSP) Oil	6-24 l/m and 20-46 l/m

Hydraulic Test Equipment

Flowmeters

Features & Benefits

- Speedy diagnosis of hydraulic circuit faults.
- Flows ranging from 2 to 360 l/min.
- Measuring flow, pressure and temperature.
- Fully Portable – No power source required.
- Hydrotrac unit for flows from 2 to 110 l/min available.
- Designed for oil applications only.

Specification

Flow range:
2 to 360 l/min.

Pressure range:
1 to 350 bar.

Temperature range:
0°C to +90°C.

Installation Details

Safety

An axial flow restrictor valve is fitted which can be adjusted under full load from open to fully closed¹, and to complete the specification, a safety blow-out disc, set to fail at 455 bar is fitted to the manifold in a position facing away from the operator when reading the gauges normally. Two spare blow-out discs are supplied which are easily replaced by removing the hexagonal plug on the gauge manifold.

Additional blow out discs can be ordered - 41203B (Bag of 10)

Note 3: 4123 'Hydrotrac' unit features 2 flowmeters (2 - 20 and 10 - 110 l/min) and 1 pressure gauge and 1 thermometer.

Troubleshooting Test Units

Hydraulic Test Units are designed specifically for the speedy diagnosis of hydraulic circuit faults in mobile, marine and industrial systems using the normal range of mineral oils. Their rugged construction based mainly on mild steel, manganese bronze and acrylic materials makes them ideally suited for arduous use in the field.

Each unit is supplied in a convenient carrying case providing full protection and additional storage space for fittings. Because they need no power source such as batteries etc, they are always ready for instant use.

6 models are available to cover flow capacities up to 360 l/min and each incorporates a direct reading, uni-directional flow meter. The meter, which is both self cleaning and reasonably tolerant of contaminated fluids is coupled to a manifold that houses a glycerine-filled pressure gauge calibrated 0 to 350 bar and a dial-type thermometer with a 0°C to 100°C range.

Unit can only operate up to 90°C.

For further convenience the scale on the flow meter can be rotated to ensure visibility in any situation and the installed attitude of the assembly is not critical, though whenever possible the unit should be mounted with pressure gauge vertical and gauge case relief valve uppermost. The unit is designed for flow to be in the direction of the arrow on the flowmeter scale and must not be installed with the flow reversed.

¹ Note: Permissible allowed see page <50ml/min at 350 bar (5076 psi)

Flow Products - For Compressed Air Applications

Flowmeters & Monitors

Features & Benefits

(A) Flowline Flowswitches and Flowmeters

- Calibrated for direct reading of compressed air at 7 bar.
- Works in any plane.
- Brass or stainless steel models available in 4 sizes.
- Calibrated at 7 bar and 20°C.
- Flow ranges from 2 to 600 SCFM.
- Pressure 1-41 bar max.
- Optional reed switch upgrade.

(B) Loflow Air Flowmeters

- Flow measurement from 1.1 to 720 l/min. Max 10 bar rating.

(C) Compressed Air Test Equipment

- 6 models available – 1/4", 3/4" and 1 1/4" BSP.
- Air flow range 2 to 600 SCFM.
- Pressure 1-41 bar max.

Specification

Full technical specifications for the Flowmeter, Flowswitch, LoFlow and test equipment products are provided in the respective pages for these products.

Guide to Contamination Control

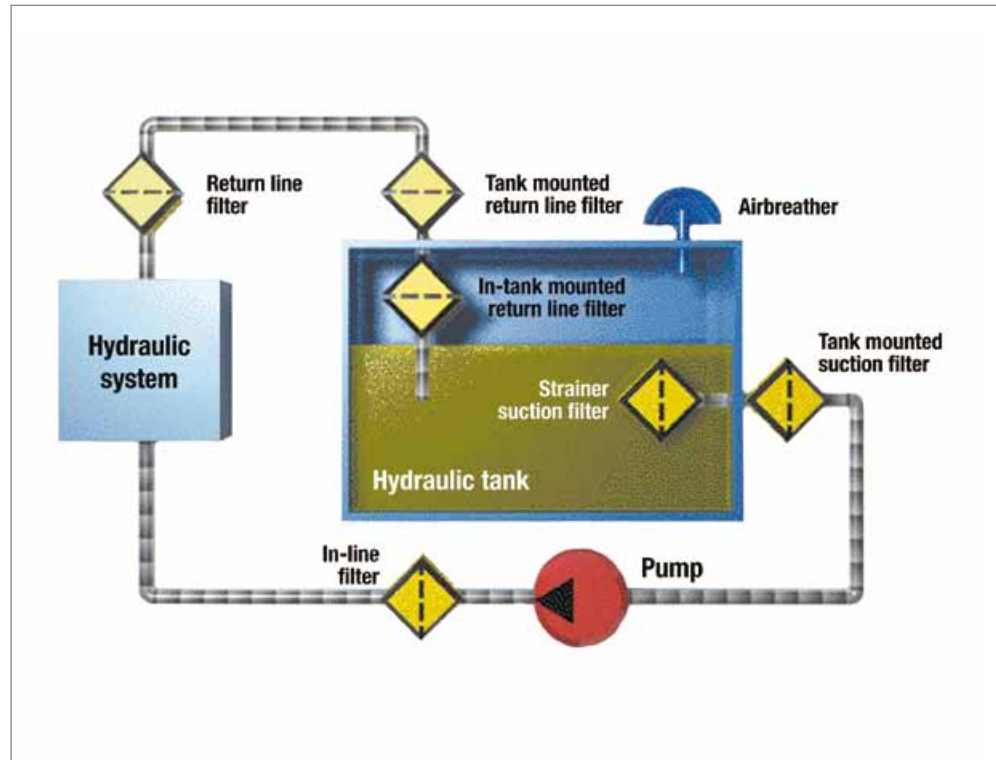

Understanding and Answering the Threat of Contamination

Reduce downtime with effective contamination monitoring

Understanding and answering the threat of contamination

Understanding the significance that solid and liquid contamination can play in undermining the efficiency and effectiveness of hydraulic oils is a complex subject but one that has some basic components and solutions as to how to monitor, measure and ultimately remove any particulate from a system. Parker Filtration can offer many years of experience on this subject.

- Solid contamination codes charted.
- Condition monitoring equipment explained.
- Degree of filtration overview

Guide to Contamination Control

Understanding and Answering the Threat of Contamination

The Threat of Contamination

Industry requirements with regard to hydraulic and oil lubrication systems emphasise reliability, long lifetime and reduced energy use. Depending on the circumstances, some 70 - 80% of system failures are due to contamination. Cleanliness monitoring is essential in contamination control, as is selecting the right filter components. The first step, however, is understanding the specific system requirements and local operating conditions.

This guide to contamination control describes:

- Types of failures
- Sources of contamination
- Fluid cleanliness level
- Condition monitoring equipment
- Cleanliness service
- Filtration: parameters and facts
- Filter selection and filter types

Types of Failures

Component failure is often an invisible process. In general three types of failure can be distinguished:

1. Catastrophic Failures

This failure occurs suddenly and without warning; it is of a permanent nature. It is often caused by larger sized particles entering a component and obstructing the relative movement between surfaces, resulting in seizure of the component.

2. Transient Failures

Generally speaking, this type of failure is short-lived and goes unnoticed, although the consequences rarely do. It is caused by particles that momentarily interfere with the function of a component. The particles lodge in a critical clearance between matching parts, only to be washed away during the next operation cycle. As a result, components become less predictable and thus unsafe.

3. Degradation Failures

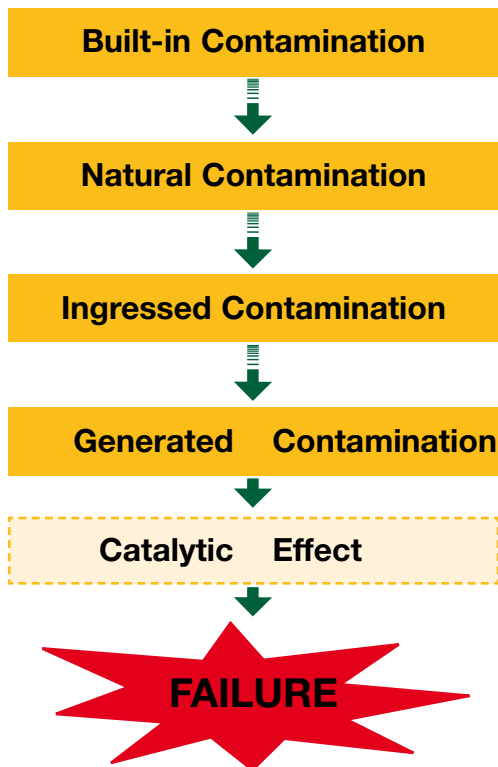

Gradual deterioration in the performance of a component results in its eventual repair or replacement. This failure is caused by the effect of wear induced by contamination. Additional generated contamination can lead to a catastrophic failure. Failures or reduced system performance have a direct impact on the cost of ownership, the efficiency rate and the perceived quality perception of the end users.

Sources of Contamination

Finding the balance

What does it take to implement system-matched filtration? A review of the sources of contamination is the first step in finding the balance between the performance of the filtration system and the system demands.

Sources of Contamination

Several sources of contamination must be taken into account when it comes to the effective implementation of system-matched filtration. Without adequate filtration, the protection of the system is jeopardised and component or system failure is imminent. System-matched filtration changes the deterioration into a balanced situation, representing the continuously controlled process that is needed to achieve system reliability. Realising this is only possible when the required fluid cleanliness levels are maintained.

1. Built-in Contamination

Residual contamination from the manufacturing and assembly processes cannot be avoided. Examples are machining debris, weld spatters, casting sand, paint, pipe sealant or fibres from cleaning rags. Flushing system components prior to assembly and decent housekeeping during the various stages of the assembly process are a must to reduce the amount of built-in contamination.

Filter media pleating

2. Natural Contamination

In general, the cleanliness level of new oil does not always meet the requirements of the system. Despite the efforts to control the fluid cleanliness level during the production processes, transport and distribution may contaminate the oil. Depending on the requirements for system cleanliness, we advise that you filter new oil before usage.

3. Ingressed Contamination

Systems are always under attack from contamination. Unfortunately it is not possible to avoid ingress contamination. Air breathers, cylinder rod seals, wiper seals, component seals or poorly fitted covers are a few examples of system parts that may have an important influence on the amount of ingress contamination.

4. Generated Contamination

Particles generate particles. This phenomenon is known as abrasion. Other processes like cavitation, corrosion, erosion, fatigue and metallic contact between moving parts generates particles and thus influences the contamination that is already present in the system. Even though these processes cannot always be avoided, their impact is strongly influenced by effective filtration.

5. Catalytic Effect

During the filter selection process, attention is generally given to the removal of solid, hard-type contamination only. The performance of hydraulic and lubrication fluids is influenced by the catalytic effect. As a result of the catalytic effect, the lifetime of the oil is significantly reduced.

Guide to Contamination Control

Understanding and Answering the Threat of Contamination

Lifetime of Oil

Selecting the Right Oil

Oils are selected based on their unique performance with regard to:

- Energy transfer
- Corrosion protection
- Cooling (transfer of heat)
- Lubrication

The lifetime of oils is influenced by the amount of oxygen, oil temperature, water content and presence of catalyser type elements. The allowed water content varies for each type of oil. Due to, for example, seal leakage or condensation, the water content can easily reach concentrations far above the allowed water content value. The combination of water and wear elements like iron or copper causes a catalytic effect and as a result, reduces the lifetime of the oil. The lifetime of oil is also influenced by the amount of generated static electrics.

Lifetime Reduction

The lifetime reduction of oil is expressed by the degradation factor. The influence of the catalytic effect of the degradation factor is shown below.

Oil degradation can reduce the protection against corrosion and lubrication performance.

Regular oil analysis is important to monitor the condition of the hydraulic or lubrication fluid. This analysis is also used to obtain information related to the process of selecting system-matched filter components.

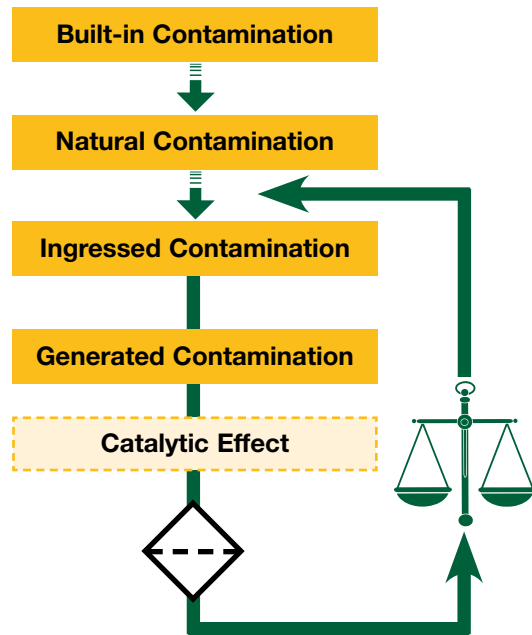

Tanktopper II return line filter with integrated air breather and patented LEIF® element

The Balance between System Requirements and Filtration System Performance

Parker's philosophy exceeds the traditional approach of protecting the system by means of filtration.

System-matched filtration is not limited to a filter alone. The process of system-matched filtration is based on the correct implementation of suitable filtration products, taking into account the requirements from the hydraulic or lubrication fluids, system components and customer expectations.

Contamination Control

Achieving the required system protection implicates a correct understanding of the system. Today filters are selected based on several parameters like β -values, pressure drop and dirt holding capacity.

Filtration is built-in safety, meant to achieve and maintain the required fluid cleanliness level during a defined period. This implicates a more detailed approach, which can only be realised when several filtration parameters are considered.

Before Filtration

After Filtration

Contamination & Cleanliness Level

Sizes of Contamination

Filters are selected to capture contamination from hydraulic and lubrication fluids.

Contamination is an invisible enemy. The human eye cannot see particles smaller than 40 micron. For the correct understanding a comparison is given below.

Component	Microns
Anti-friction bearings	0.5
Vane pump (vane tip to other ring)	0.5 - 1
Gear pump (gear to side plate)	0.5 - 5
Servo valves (spool to sleeve)	1 - 4
Hydrostatic bearings	1 - 25
Piston pump (piston to bore)	5 - 40
Servo valves flapper wall	18 - 63
Actuators	50 - 250
Servo valve orifice	130 - 450

Typical hydraulic component clearances are given as an indication only

Fluid Cleanliness Level

The ISO 4406:1999 standard is an important code to define the fluid cleanliness level using a solid contamination code.

This ISO code is determined by allocating a first scale number to the total number of particles larger than 4µm, allocating a second scale number to all particles larger than 6µm and allocating a third scale number to the total number of particles larger than 14µm.

In the recent past, the fluid cleanliness level code was determined using the ISO 4406:1987 standard. Instead of counting particles sizes 4, 6 and 14µm, the fluid cleanliness level was determined by counting particles larger than 5 and 15µm. The particle size 2µm was added later.

As a result of upgrading the ISO standards, new particle sizes have been defined. In general, the fluid cleanliness code will not change as a result of this new standard. Built-up historic data remains directly comparable to new data.

ISO 4406:1999 cleanliness classes

Guide to Contamination Control

Understanding and Answering the Threat of Contamination

Cleanliness Level

Examples of cleanliness level are given in the ISO graph. These lines represent:

- A. Low-pressure systems (code 21/20/17)
- B. Low-pressure control systems (code 19/18/14)
- C. Sophisticated pumps/motors control valves (code 18/17/13)
- D. Highly sophisticated systems and hydrostatic transmissions (code 16/15/11)
- E. Sensitive servo systems (code 15/14/10)
- F. High performance sensitive systems (code 12/11/8)

We recommend verifying the required cleanliness level based on the components used for the system. Manufacturers of system components often provide information related to the required fluid cleanliness level for their products.

Condition Monitoring Equipment

Over the years, fluid condition monitoring has become increasingly important. By offering system-matched filtration solutions, the stringent customer demands related to extended component lifetime or improved system reliability can be met. Parker has developed a complete range of instruments and components for maintenance programmes and local fluid condition analysis such as the LaserCM below.

Parker's particle counters are well known for their accurate performance in the field or in a production line environment. Lightweight portable particle counters can be used for temporary fluid cleanliness measurements.

The MCM20, designed for permanent installation, is meant for continuous fluid monitoring. The compact MS100 and MS150 moisture sensor means a complete solution is available to measure the water content in hydraulic or lubrication fluids.

Solid Contaminant Codes

In addition to ISO 4406: 1999, other standards are used to express the fluid cleanliness level. A comparison between the codes is given below.

ISO 4406: 1999	ISO 4406: 1987	NAS 1638 CLASS
13/11/8	11/8	2
14/12/9	12/9	3
15/13/10	13/10	4
16/14/9	14/9	-
16/15/11	14/10	5
17/15/9	15/9	-
17/15/10	15/10	-
17/15/12	15/12	6
18/16/10	16/10	-
18/16/11	16/11	-
18/16/13	16/13	7
19/17/12	17/12	-
19/17/14	17/14	8
20/18/12	18/12	-
20/18/13	18/13	-
20/18/15	18/15	9
21/19/13	19/13	-
21/19/16	19/16	10
22/20/13	20/13	-
22/20/17	20/17	11

Note:
 ISO 4406: 1987 is based on particle sizes larger than 5 and 15µm
 ISO 4406: 1999 is based on particles sizes larger than 4, 6 and 14µm

Several Cleanliness Levels

Cleanliness Service

Cleanliness Service to Prevent Failures

As Parker has no financial interest in the oil industry, the company can operate as an independent laboratory. The development laboratory at Parker Filtration BV in Arnhem - the only laboratory of its kind in Belgium, the Netherlands and Luxembourg - has at its disposal all the facilities for its extensive R & D department. In addition, the services are offered on a commercial basis to third parties.

Equipment

The laboratory uses state-of-the-art test equipment. The company has invested in the latest Karl Fischer coulometric equipment, that prevents tests from being influenced by, among other things, additives in the oil. The particle-counting equipment is calibrated according to the recent ISO 11171 standard. It is now possible to indicate the measured cleanliness according to ISO 4406:1999.

Standard Test

The high-quality standard test, carried out in Parker's laboratory, consists of a water analysis and a cleanliness calculation according to ISO 4406, the new ISO 4406:1999 and the NAS 1638 standard, as part of which particles from 2 to 100µm are measured and reported. Membrane research and digital photography of the membrane are also part of the standard test. The results of each test are described in a report that contains clear conclusions. It is also possible to conduct a spectral analysis.

In Practice

How do the laboratory services work? Only three days after receipt of the oil sample, the standard analysis is completed. The results of a spectral analysis are known after seven days. The reports can be sent directly and completely by e-mail. A free sample bottle is available upon request.

Filtration: Parameters and Facts

Generally speaking, fibre-type materials like cellulose and glass fibre are applied for hydraulic and lubrication fluid filtration. Filters are selected based on the following parameters:

- Required protection of system components
- Location of filter(s) in the system
- Flow rate and allowed pressure loss
- Desired filter element life time
- Hydraulic or lubrication fluid type

The dirt holding capacity is the amount of solid contamination a filter can hold before the filter material is plugged. This value is measured in accordance to ISO 16889 using ISO MTD test dust. The filter element lifetime strongly depends on the contamination conditions that are present in the system and its environment.

Predicting the filter element lifetime in the system is complicated, because of the variety in contamination (e.g. metal, sand and fibres, each with a certain distribution of particle sizes) in relation to the specified dirt holding capacity.

Degree of Filtration

Parker's filtration philosophy is based on the optimum distribution of several particle sizes by using the complete thickness of glass fibre layers.

Each selected filter layer has a unique performance for the removal of solid contamination. System-matched filtration implicates the removal of harmful particles. For some systems an improved removal efficiency for smaller sized particles is more important compared to other systems using components. The combination of pre- and main layers results in an achievable fluid cleanliness level. The complete package of filter and support layers is indicated as pleat pack.

Guide to Contamination Control

Understanding and Answering the Threat of Contamination

Degree of Filtration

The β -value is used to express the removal efficiency for a defined particle size.

$$\beta(x) = \frac{N \text{ particles upstream } > x \mu\text{m}}{N \text{ particles downstream } > x \mu\text{m}}$$

The ISO 4572 standard formerly required only the $\beta_{x>75}$ value. That standard has now been upgraded and replaced by ISO 16889, reporting the β -value of 2, 10, 75, 100, 200 and 1000 for each filter medium or pleat pack. The corresponding efficiencies are given below.

β -value	2	10	75	100	200	1000
Efficiency	50,00%	90,00%	98,67%	99,00%	99,50%	99,99%

Taking into account a $\beta_{75(c)>10}$ element, the removal efficiency is 98.67% of particles larger than 10 micron.

Too often filter elements are compared by looking at one β -value only. The focus on high β -values is misleading and does not always provide the required information.

Filter Comparison β -value	Filter element I	Filter element II
Beta-value	$\beta_{-75(c)>10}$	$\beta_{-200(c)>10}$
Number of particles at upstream of filter >10 micron	5,000,000	5,000,000
Removal efficiency	98,67%	99,50%
Number of particles at downstream of filter >10 micron	66,500	25,000

Statements that a β_{200} filter improves the fluid cleanliness level by a factor 2.6 (66,500/25,000) are misleading. Fluid cleanliness codes are based on several particle sizes. More information is needed to determine the overall removal performance of filter medias.

A comparison between two 10-micron filter medias.

The overall removal efficiency of the element forms the core of fluid cleanliness levels

The correct degree of filtration is chosen based on the required fluid cleanliness level, not based on one β -value.

An indication of recommended fluid cleanliness levels is given in this table. It is common use in the industry that manufacturers of components prescribe required fluid cleanliness level for the reliable functioning of their products.

Components	ISO Code
Servo control valves	16/14/11
Proportional valves	17/15/12
Valve & piston pumps/motors	18/16/13
Directional & pressure control valves	18/16/13
Gear pumps/motors	19/17/14
Flow control valves	20/18/15
Cylinders	20/18/15

The ISO codes are indicative values only.

Filter media composition

Flow Rate & Pressure Lost

Flow Rate and Allowable Pressure Lost

Each filter element is designed to handle a nominal flow rate. The allowed flow rate depends on fluid viscosity, degree of filtration, and the amount of pressure that is lost. Indirectly, the required element lifetime is an important parameter. A larger sized element with a more effective filter element area has a positive influence on the element lifetime.

Media	Degree of filtration	Upper range	Lower range
Q3 2	16/14/10	13/11/8	
Q3 5	18/16/13	17/15/9	
Q310	20/18/15	19/17/12	
Q320	22/20/17	21/19/13	

The given cleanliness levels are indicative values only, based on average values

Filter elements are chosen based on their initial clean element pressure drop. It is preferred to apply a ratio of at least three between element bypass settings and element initial pressure drops.

Comparing filter elements with different filter media based on the initial clean element pressure drop does not give a reliable indication of the element dirt holding capacity. In this example the filter media A has a higher initial pressure drop. However, during its lifetime the pressure lost is more constant compared to media B. This results in a longer element lifetime. The difference in performance is caused by a more effective distribution of captured particles in media A.

Filter Types and Locations

Depending on the filter type and corresponding location, a general pressure lost recommendation can be given

Suction Line: 0.03-0.05 bar

Pressure Line: 1 bar

Return Line: 0.3-0.5 bar

Suction Return Filter: 1 bar

Parker's Motion & Control Technologies

At Parker, we're guided by a relentless drive to help our customers become more productive and achieve higher levels of profitability by engineering the best systems for their requirements. It means looking at customer applications from many angles to find new ways to create value. Whatever the motion and control technology need, Parker has the experience, breadth of product and global reach to consistently deliver. No company knows more about motion and control technology than Parker. For further info call 00800 27 27 5374

Aerospace Key Markets

- Aftermarket services
- Commercial transports
- Engines
- General & business aviation
- Helicopters
- Launch vehicles
- Military aircraft
- Missiles
- Power generation
- Regional transports
- Unmanned aerial vehicles

Key Products

- Control systems & actuation products
- Engine systems & components
